## PROGRAM REQUESTS

**[programs@amb-os.com](mailto:programs@amb-os.com)**

### NOTE

As of this version of software, only one receiver can be controlled by the Amb-OS User Interface software on a single PC. With multiple receivers, each receiver needs a separate computer controlling the individual receiver.

### WARNING

One AMR-100 receiver can be controlled by multiple Amb-OS User Interface programs on different computers, but without proper precautions, unpredictable results can be experienced.

See Multiple Amb-OS User Interface Instances in the appendix.

# INTRODUCTION

The Amb-OS User Interface (UI) works with the Amb-OS [AMR-100](#) receiver to get satellite delivered programs to automation systems or directly to the air chain quickly, conveniently and without user intervention. Transfers can be done [automatically](#), on [schedule](#) or [manually](#). Programs can also be [played](#) back just like a live program directly to the air chain.

1. [Playlists](#) can be created to allow programs to air or record directly from the [AMR-100](#) receiver.
2. Programs can be transferred from the [AMR-100](#) to a local computer for playback from an automation system in the following ways:
  - Programs can be transferred as [soon as they arrive](#)
  - Programs can be transferred on a [schedule](#)
  - Programs can be transferred [manually](#)
3. When files are transferred, they can also be [renamed](#) and [converted](#) to a WAV format regardless of the method of transfer. The [default file format](#) is MP2.

## Transfer Options

- The “[Miscellaneous transfers](#)” section describes how to allow automatic transfers and renaming a program as soon as it arrives.
- The “[Rename Files](#)” section describes the process of scheduling a transfer and renaming a program.
- The “[Manual transfer](#)” section describes how to manually transfer a program.

### NOTE

The Amb-OS User Interface actually just copies programs from the receiver to a local hard disk and leaves the original file on the [AMR-100](#). However, “transfer” will be used to refer to this process of copying programs.

### WARNING

To transfer programs, Amb-OS User Interface (UI), the computer must be on and the UI running at all times.

The Amb-OS User Interface does not have to be running for the [AMR-100](#) to play a program from its audio ports.

After creating and saving a [playlist](#), it gets transferred to the [AMR-100](#). After being transferred, the [AMR-100](#) will automatically play the programs without any user intervention. If no [file transfers](#) are used, the Amb-OS User Interface only has to be running when creating or editing the [playlist](#).

The Amb-OS User Interface also has two log windows (the “[Activity Log](#)” and “[Status Window](#)”) to help troubleshoot problems and, more importantly, display the status of programs being received and [transferred](#). The most used window is the “[Activity Log](#),” because it shows which programs have arrived and whether they were [transferred](#).

## AMB-OS USER INTERFACE SUMMARY

The Amb-OS User Interface can either [transfer programs](#) from the [AMR-100](#) receiver or create a [playlist](#) for the [AMR-100](#) receiver that will play a program at a specific time to air live or record. [Transferring programs](#) can be done in three ways—[Automatically](#), [timed](#) and [manually](#).

# INSTALLATION

Download the [Amb-OS User Interface](http://www.Amb-OS.com/support.html) from <http://www.Amb-OS.com/support.html>. Click on the link for [User Interface \(UI\) Software](#) and save the compressed zipped file to your computer. [Extract the Amb-OS User Interface](#) installation program and run the Amb-OS User Interface [installation program](#).

The [installation](#) process automatically installs the Amb-OS icon on the desktop. Double click on the desktop icon labeled “Amb-OS Interface” to run the Amb-OS User Interface program.

The [appendix](#) has detailed instructions for [downloading](#), [extracting](#) and [installing](#) the Amb-OS User Interface software.

## WARNING

**With Windows® 8, do not use compatibility mode when installing the Amb-OS User Interface. This can cause the program to not function properly.**

## PROGRAM OPERATION

After completing the [program installation](#) (see “[Installation Details](#)” in the “[Appendix](#)”), the User Interface will need to have the “[Initial settings](#)” (“[System information](#)” and “[file renames](#)”) configured before running the program for the first time. The “[Initial settings](#)” can be imported from a [local file](#), [the receiver](#) and from the [Ambassador FTP site](#) (see “[Initial Installation](#)” in the “[Appendix](#)”). If no import file is used the settings will have to be set [manually](#).

Click on “[Exit](#)” to terminate the Amb-OS User Interface. A confirmation window will open and, after confirming the decision to exit, a window will open that delays termination for three seconds to prevent programs in the process of transferring from becoming corrupted.

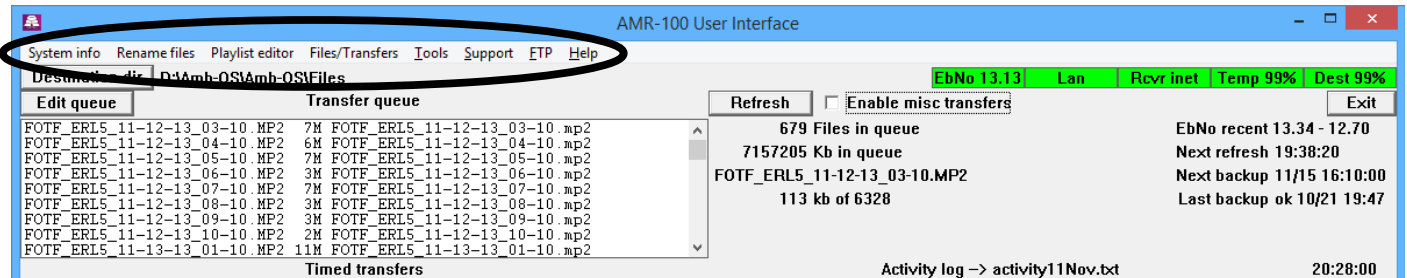

## Top Menu, Button, Window and Message Explanation

The Amb-OS User Interface has a Top Menu, various buttons, windows and some messages.

### The Top Menu

**System info:** Opens the dialog box to change the receiver settings. If the network administrator changes the IP Address for the [AMR-100](#) or if it is replaced, the IP address in the [receiver parameters](#) will need to be changed to match the [AMR-100](#).

**Rename files:** Opens the “File Rename” dialog box to allow changing program names when transferring them from the [AMR-100](#) to the [destination directory](#). A [transfer time](#) can also be entered. If no name is selected, the program will be transferred with the default [Amb-OS system](#) name it has on the [AMR-100](#).

**Playlist editor:** Opens the Playlist Editor dialog box to define the time and port the [AMR-100](#) uses for audio playback.

**Files/Transfers:** Opens a box showing the programs on the [AMR-100](#), how they are transferred ([timed](#) or [automatically](#)) and the transferred name. It also gives the option to [manually](#) transfer a program.

**Tools:** Allows [importing](#) and [exporting](#) of individual settings: [Receiver IP](#), [destination directory](#), [file naming](#) list and transfers and other customized information. It also shows approved programs for the [AMR-100](#) and what files have been received. Programs can be [checked for errors](#) and [played](#) from the [AMR-100](#)’s audio ports. Several other utilities have also been included.

**Support:** Amb-OS support personnel use these options to troubleshoot issues with the Amb-OS User Interface and should only be used when directed by an Amb-OS support personnel. “[Backup files to Ambassador](#)” and “[Update UI](#)” can be used. If the Amb-OS User Interface computer does not have Internet access, make sure the “[Do not send email](#)” is checked in the “[Backup and Notifications](#)” settings in the “[System Information](#).”

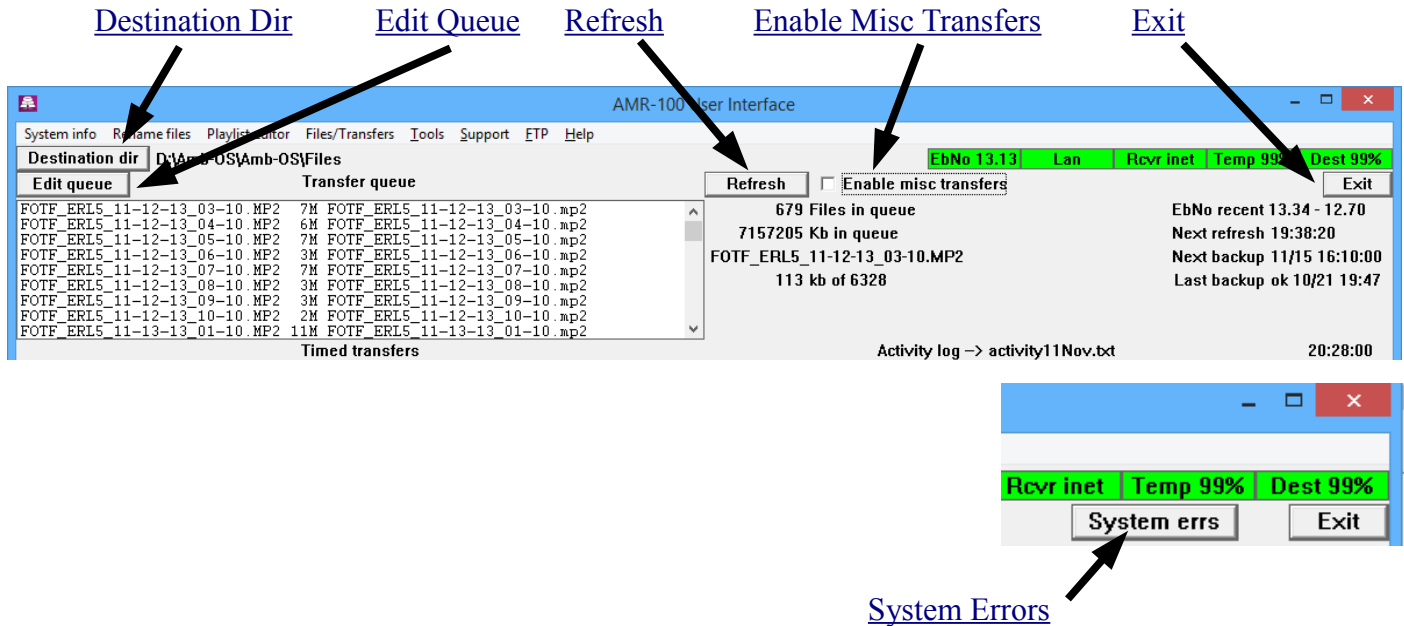

**NOTE**  
Some support options require the computer running the Amb-OS User Interface be connected to the Internet.

**FTP:** Configures the Amb-OS User Interface to download programs from an FTP site. The FTP transfer can modify the file as specified in the “[Output Format](#)” settings in “[System Information](#).” MP3 files cannot be converted or modified.

**NOTE**  
MP3 transfers through the FTP option cannot be converted or modified.

**Help:** Brings up the help window with several documentation files, links and updates. It also shows the current version of the Amb-OS User Interface.

## Buttons

**Destination Dir:** This allows changing the directory where programs are transferred from the [AMR-100](#).

**Edit Queue:** Allows reordering of the files in the queue.

**Refresh:** This button forces the Amb-OS User Interface to read the [AMR-100](#) hard disk and update the [file list](#).

**Enable Misc Transfers:** When checked, the Amb-OS User Interface automatically transfers programs in the [Transfer queue](#). If any program does not have a [timed transfer](#) set, it *will not* transfer unless the [Enable Misc Transfers](#) box is checked. [File transfers](#) are not used if programs are only played out the audio ports on the [AMR-100](#).

### WARNING

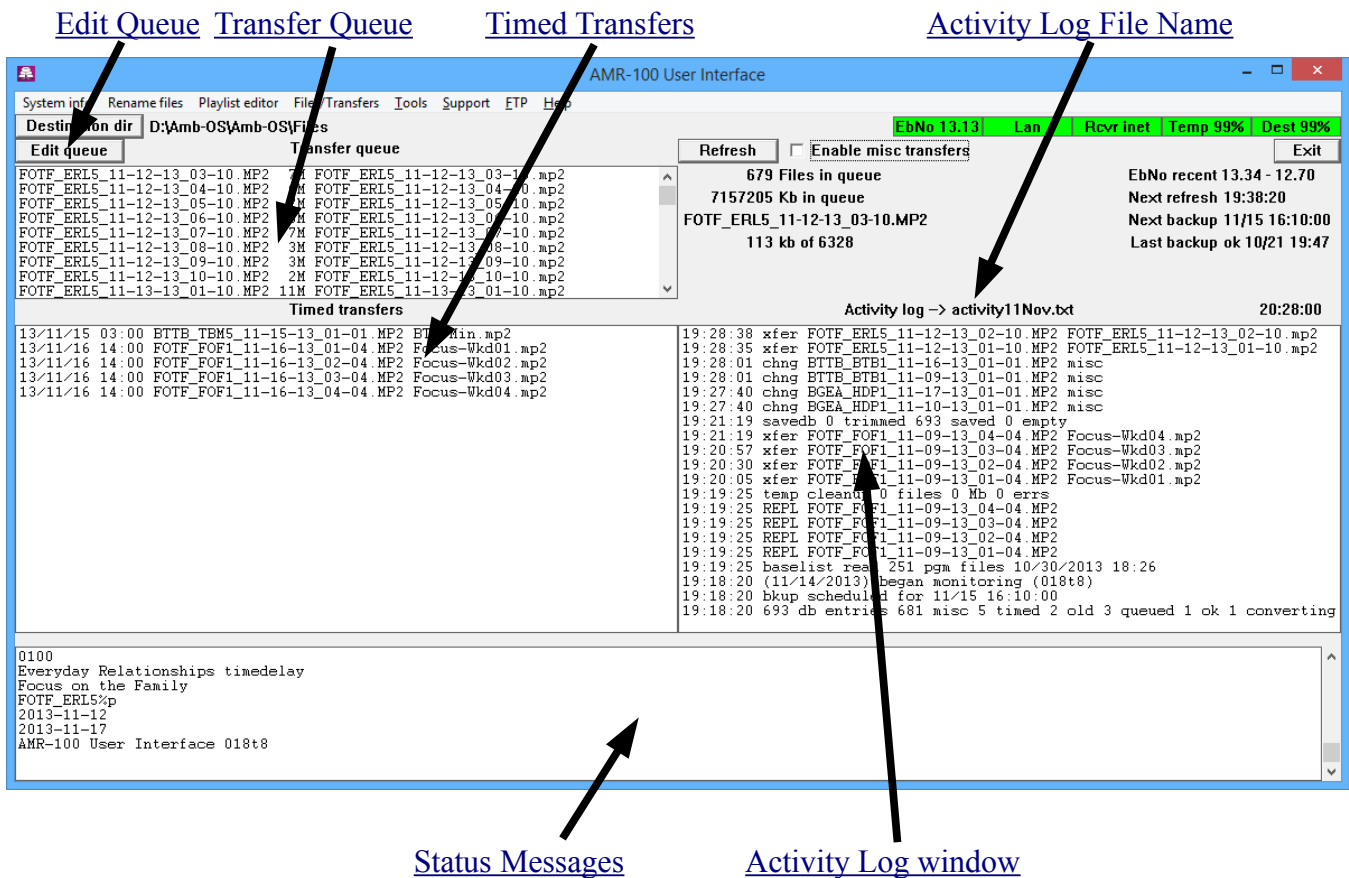

**“Enable misc transfers” has to be checked to automatically transfer a program with no scheduled transfer time.**

**Exit:** This terminates the Amb-OS User Interface. A confirmation window opens and, after confirming the decision to exit, another window opens providing a three second delay to prevent programs currently transferring from becoming corrupted.

**System Errors:** This button appears if a problem occurs with the Windows® operating system. Clicking on it opens a window to display the error.

## Windows

**Edit Queue:** Allows changing the order of programs in the **Transfer Queue**.

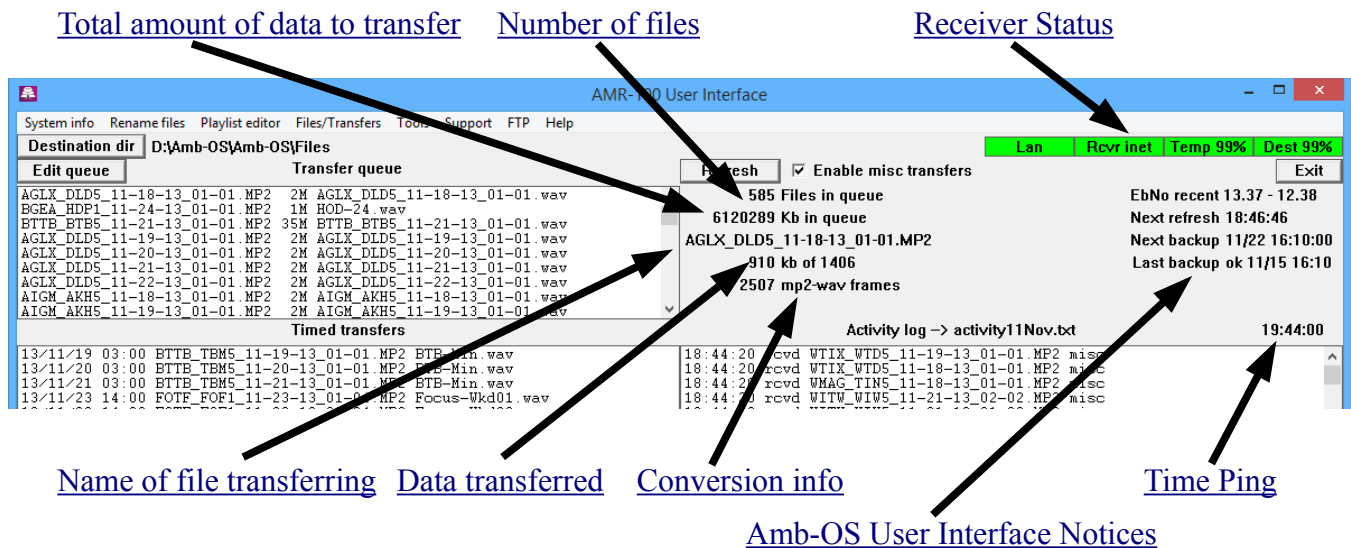

**Transfer Queue:** Shows all the programs to be transferred as soon as they arrive to the directory specified in the “**Destination Directory**” setting. These programs will only be transferred if the “**Enable misc transfers**” is checked.

**Timed Transfers:** Displays the transfer times scheduled in the “**Rename files**” section.

**Activity log window:** Shows the program status on the **AMR-100’s** hard drive. The “**Activity log file,**” created automatically, is shown above the Activity log file window with the most recent file shown.

**Status Message:** This gives a summary of internal network and program messages. It is used primarily for debugging issues by Amb-OS support technicians.

## Transfer Messages

**Total amount of data to transfer:** Shows how much data needs to be transferred for all of the programs to be transferred.

**Number of Files:** Shows the number of programs to be transferred from the [AMR-100](#).

**Receiver Status:** Shows the status of the [AMR-100](#) (EbNo, Network and Internet) and available disk space on the Amb-OS User Interface drives. Hovering over the indicators opens [pop-up windows](#) with more details of the parameter.

**Name of file being transferred:** Shows the [Amb-OS file name](#) of the program being transferred.

**Data Transferred:** Displays the how much of the program has been transferred and the size of the program.

**mp2-wav Frames:** Tracks the progress of a conversion if any WAV [format](#) has been selected.

## Amb-OS User Interface Notices

Displays the EbNo range over the last 24 hours, the time of the next refresh of received programs, time and date for the next backup and the last backup with it's status.

- **EbNo** reports the EbNo values from the [AMR-100](#). With the [AMR-100I](#) (Internet only receiver), the EbNo is 0.00 – 0.00, because no RF is used.
- **Next Refresh** shows the next time the automated refresh will happen to insure that the latest information about program transfers are current and gets the latest program information from the receiver. Next refresh shows the time of the next refresh to check the status of programs on the [AMR-100](#).
- **Next Backup** shows the time the next back up of the Amb-OS User Interface settings.
- **Last Backup** reports the time and status of the last backup.

The Amb-OS User Interface can [export the settings](#) to a desired file, but the settings are automatically uploaded to the Amb-OS FTP site and to the [AMR-100](#) receiver. If the Amb-OS User Interface does not have an Internet connection, be sure to check "[Do not backup to FTP](#)" in the "[System information](#)" settings.

**Time Ping:** The message “time ping” only occurs when the program is first initiated. It queries the receiver for its time once a minute, so it can take up to a minute for the time to appear.

After the program successfully communicates with the receiver and gets the time, the message “time ping” changes to the current time of the receiver.

While The seconds are displayed as part reading the time from the receiver, the seconds do not update, because the time is only updated every 60 seconds. Therefore, the seconds **do not** update on the screen. This only verifies the [AMR-100's](#) time has been read.

## System Info

This configures the settings for the Amb-OS User Interface.

[Receiver Parameters](#)

[Program Update](#)

[Output Format](#)

[Output Channels](#)

[Transfer Options](#)

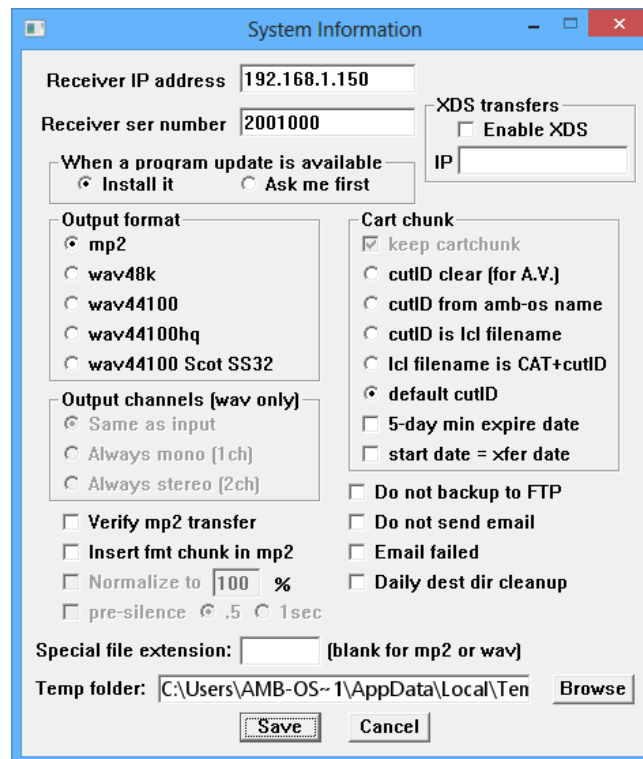

[Special File Extensions](#)

[Temp Folder](#)

[XDS Transfers](#)

[Cart Chunk Options](#)

[Backup and Notification Settings](#)

The image shows a 'System Information' dialog box with various configuration options. The 'Receiver IP address' is set to 192.168.1.150 and the 'Receiver ser number' is 2001000. Under 'When a program update is available', 'Install it' is selected. The 'Output format' is set to 'mp2'. The 'Output channels (wav only)' are set to 'Same as input'. The 'Transfer Options' section includes checkboxes for 'Verify mp2 transfer', 'Insert fmt chunk in mp2', 'Normalize to 100 %', and 'pre-silence .5 sec'. The 'Special file extension' is blank. The 'Temp folder' is set to 'C:\Users\AMB-OS~1\AppData\Local\Ten'. The 'XDS transfers' section has 'Enable XDS' unchecked. The 'Cart chunk' section has 'keep cartchunk' checked. The 'Backup and Notification Settings' section has 'Do not backup to FTP', 'Do not send email', 'Email failed', and 'Daily dest dir cleanup' all unchecked. The 'Save' and 'Cancel' buttons are at the bottom.

[Save/Cancel](#)

## Receiver Parameters

The [IP Address and serial number](#) can be obtained from the front panel of the [AMR-100](#). Press <ENTER> once on the [AMR-100](#) to [view the settings](#) and verify them in the dialog box.

Receiver IP address	192.168.1.150
Receiver ser number	2001000

## Program Update Option

Updates can either be installed automatically or the Amb-OS User Interface can prompt to install it immediately or manually update to the new version at a later time.

When a program update is available
<input checked="" type="radio"/> Install it <input type="radio"/> Ask me first

1. “Install it” automatically updates the Amb-OS User Interface (preferred).
2. “Ask me first” will prompt for permission to install the update immediately or at a later time.

To insure proper functioning of the Amb-OS User Interface, select “Install it” to avoid having issues in transferring programs.

### NOTE

If the setting for the [program updates](#) is set to “Install it,” the Amb-OS User Interface will automatically install the update and keep the settings from the previous version when restarting the program.

## Output format

Transferred programs can be converted to a WAV format or left as the [default Amb-OS MP2 format](#).

Output format
<input checked="" type="radio"/> mp2
<input type="radio"/> wav48k
<input type="radio"/> wav44100
<input type="radio"/> wav44100hq
<input type="radio"/> wav44100 Scot SS32

**mp2** leaves the program in its [native format](#) (48K, MP2 encoding) and just transfers the program using the specified name in the “[Renaming Files](#).” With the MP2 format, more options exist to use or manipulate the [Cart Chunk](#) data. Some automation systems require changes to the [Cart Chunk](#) information, for example, some Audio Vault® systems need to have the “[Cut ID cleared](#)” box checked in the “[Cart chunk](#)” section. Using the MP2 format, the file [extension](#) can be changed, but the “[Output channels](#)” cannot be changed.

**wav48K** leaves the program in its [native 48K](#) encoding, but converts it to a WAV file. When converting to a WAV format, the program can be changed to mono from stereo or dual channel from mono or left as the original format using the “[Output channels](#).” Some [Cart Chunk](#) options can also be used or manipulated.

**wav44100** converts the program to WAV at 44.1K. This takes less time, but it also allows changing the “[output channels](#).” The [Cart Chunk](#) data can only be retained and left unchanged or cleared.

**wav44100hq** also converts the MP2 format to WAV, but it takes longer due the calculations done during on the conversion. The “[output channels](#)” can be changed and the [Cart Chunk](#) data can only be retained and left unchanged or cleared.

**wav44100 Scot SS32** converts the MP2 program to a WAV format compatible with some Scott Studios® automation systems by inserting the Scott Chunk header. These Scott Studios® systems only take a 44.1K WAV formatted program, but the other WAV options, “[output channels](#),” “[normalize](#)” and “[pre-silence](#)” can be modified.

#### NOTE

The **[Cart Chunk](#)** options cannot be used to keep a program compatible with the Scott Chunk header format.

The Amb-OS User Interface takes the program name from the program’s default [Cart Chunk](#) information. The Amb-OS User Interface takes the air date in the MP2 program’s [Cart Chunk](#) for the Scott Chunk start date and the end date is set to “never end.”

The Scott Chunk cut number comes from the “[local pattern](#)” in the “[rename files](#)” settings. To insure a proper cut number, the [renamed](#) file should be SP####. The Amb-OS User Interface takes the “####” as the cut number. Any pattern without four digits causes the Amb-OS User Interface to use 9999 as the cut number.

The Amb-OS User Interface records the Scott Chunk information in the “[Status Messages](#)” window and to verify the Scott Chunk data.

### Output channels

Allows a WAV formatted program to be stereo, mono or left as the program’s native setting. The output channel options are disabled when the output format is MP2. Any [WAV conversion](#) enables the output channel options.

**Same as input** keeps program in its original format. (default)

**Always stereo (2ch)** converts a mono program to a dual mono format and leaves a stereo program unchanged.

**Always mono (1ch)** mixes a stereo program to one channel and leaves a mono program unchanged.

#### Output channels (wav only)

- ☒ Same as input
- ☐ Always mono (1ch)
- ☐ Always stereo (2ch)

#### Output channels (wav only)

- ☒ Same as input
- ☐ Always mono (1ch)
- ☐ Always stereo (2ch)

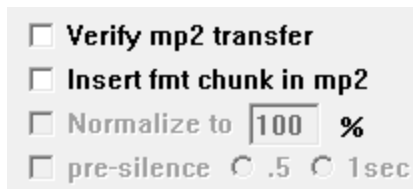

#### NOTE

Programs must be converted to WAV to have the output channels changed.

## Transfer Options

**Verify mp2 transfer** – If programs are not being received or played correctly, “Verify mp2 transfer” has the Amb-OS User Interface check program for errors while transferring it regardless of the “[output format](#)” selected. Clear it after the problem has been identified and repaired, because the verify takes longer to transfer a program.

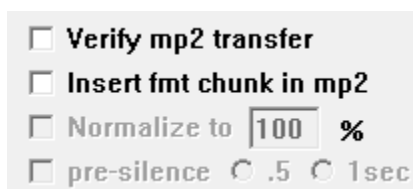

☐ Verify mp2 transfer  
☐ Insert fmt chunk in mp2  
☐ Normalize to  %  
☐ pre-silence ☒ .5 ☐ 1sec

The Amb-OS User Interface attempts to repair a program three times. After the third attempt fails, the program is still transferred to have a program with a glitch rather than no program at all.

### NOTE

**Normally, leave Verify mp2 transfer unchecked, because having this option checked takes more time to transfer for a program. If the transfer time is not an issue, the option can be left enabled.**

**Insert fmt chunk in mp2** – Can only be used with the MP2 format. This inserts the “bext,” “mext,” and “fmt” chunks in to the [Cart Chunk](#) data fields to create the [Broadcast Wave Format](#) (BWF). Some automation systems import this information instead of converting the file to WAV. The BWF format needs this option selected, the “[special file extension](#)” set as WAV and the [format](#) left as MP2.

☐ Verify mp2 transfer  
☐ Insert fmt chunk in mp2  
☐ Normalize to  %  
☐ pre-silence ☐ .5 ☐ 1sec

**Normalize to \_\_%** – If converting a program to any of the WAV formats, the overall volume can be increased or decreased from 10% of dBfs to 100% of dBfs. Only round numbers can be entered. If entering a non-integer number (90.5), only the whole number (90) is saved. [Amb-OS programs](#) have the volume normalized at -6 dBfs or 50% of full volume.

☐ Verify mp2 transfer  
☐ Insert fmt chunk in mp2  
☐ Normalize to  %  
☐ pre-silence ☒ .5 ☐ 1sec  
☒ pre-silence ☒ .5 ☐ 1sec

**Pre-Silence** – A pad of silence can be added to a program if it is converted to a WAV [format](#). To pad the silence to the beginning of the program, check the “pre-silence” box and select either the “.5” or “1” sec option.

## Special file extension

Leaving the “Special file” extension box blank puts the default extension of the program on the file (“*.MP2*” or “*.WAV*”).

Special file extension:  [blank for mp2 or wav]

However, the extension of all programs can be changed regardless of the selected [format option](#) (MP2 or WAV). If an automation system requires an extension like AFE, put AFE in extension box. All programs will have the extension “AFE” with the name specified in the [rename files](#) (*filename.AFE*).

Special file extension:  [blank for mp2 or wav]

Automation systems using the [Broadcast Wave Format](#) (BWF), need the WAV extension, but left as an MP2 format. Specify the special file extension as “WAV,” select the [Insert fmt chunk in MP2](#) ([format the Cart Chunk](#) as a WAV) and leave the program [format](#) as MP2.

Special file extension:  [blank for mp2 or wav]

## XDS Transfers

The Amb-OS User Interface can transfer files from the Moody Broadcasting XDS system. Check the “Enable XDS” and enter the IP address of the XDS receiver.

**XDS transfers**  
☒ Enable XDS  
IP 192.168.1.151

### NOTE

**To use the Moody Broadcasting XDS system, the XDS receiver needs to be registered with Moody Broadcasting. Contact Moody Broadcasting for complete details on using the XDS system.**

When using this option, programs listed with an “\*” in the “[Rename files](#)” window are the programs on the XDS system. The programs can be [renamed](#) with the Amb-OS [rename variables](#) and transferred [automatically](#) (by enabling “[Miscellaneous transfers](#)”), [timed](#) and [manually](#) just like the standard Amb-OS programs.

Ranger Bill*	RB
Stories Of Great Christians	SOGC
You may not have permission for all the XDS pgms shown	
<a href="#">XDS sign-up web page</a>	
<a href="#">Programs on XDS receiver</a>	

Some “[Tool](#)” options cannot be used with the XDS receiver.

- [Play any file](#)
- [Get baselist](#)
- [Manage file checker](#)
- [Manage status indicators](#)

## XDS Permission statement

“You may not have permission for all the XDS pgms shown” reports that, while all programs on the XDS system are displayed, only the programs with the proper permissions will transfer from the local XDS receiver.

## XDS Buttons

XDS Sign-up web page button links to the Moody Broadcasting program permission page. Contact Moody Broadcasting ([http://www.whereturn.org/micro\\_MainPage.aspx?id=64719](http://www.whereturn.org/micro_MainPage.aspx?id=64719)) for more information on getting permission for programs.

Programs on XDS receiver displays the programs on the local XDS receiver.

## Cart Chunk Options

This allows a program's Cart Chunk information to remain [unchanged](#), [cleared](#) or modified.

**Keep cartchunk** keeps or removes Cart Chunk data when transferring.

[wav44100](#) or [wav44100hq](#) format:

Checking the box keeps the Cart Chunk data and allows modifying it.

Clearing the box removes the Cart Chunk data.

[MP2](#) or [wav48k](#) format:

Automatically checks the box and allows modifying the data.

[wav44100 ScotSS32](#) format:

Disables the Cart Chunk options.

Options with the “#” are exclusive of the other options.

### NOTE

Clearing the “Cart chunk” box disables all other Cart Chunk options.

### WARNING

Using the [wav44100](#) or [wav44100hq](#) with the keep charchunk selected will enable on of the cutID options. Select the appropriate option to insure proper program transfers.

Cart chunk  
☒ keep cartchunk

Cart chunk  
☐ keep cartchunk

Cart chunk  
☐ keep cartchunk  
☒ cutID clear (for A.V.)  
☐ cutID from amb-os name  
☐ cutID is lcl filename  
☐ lcl filename is CAT+cutID  
☐ default cutID  
☐ 5-day min expire date  
☐ start date = xfer date

#**cutID clear (for A.V.)** clears the Cut ID field in the Cart Chunk data. Some older Audio Vault® systems need this option selected. The rest of the Cart Chunk data remains unchanged.

#**cutID from amb-os name** uses the first nine letters of [Amb-OS program name](#) as the cutID when transferred from [AMR-100](#). If the files has multiple parts the part number is added to the cutID as “\_xx” (\_01 for part one, \_02 for part two, etc). The “[Rename files](#)” windows displays the [Amb-OS program name](#). The program [names](#) are explained in the “[Appendix](#).”

#**cutID is lcl filename** uses the name entered in the “[Rename files](#)” section for the program's Cut ID field in the Cart Chunk data.

#**Lcl filename is CAT+cutID** uses the name entered in the “[Rename files](#)” section to fill the category and cutid fields. The first three letters of the name are put in the category field, and the rest is put in the cutid field. For example, using “PGM92132” puts “PGM” in the category field and “92132” in the cut id field. Selecting CAT+cutID option puts a [reminder](#) on the “[Renaming files](#).” Amb-OS recommends entering the program name in the “[Rename files](#)” page before selecting this option.

#**Default cutID** leaves the cutID field in the Cart Chunk unchanged.

**5-day min expire date** prevents files from being deleted until they are at least five days past their air date. The Amb-OS system normally deletes a file two days after the air date.

**Start date = xfer date** sets the Cart Chunk start date to the date the program transfers to your local disk. Some automation systems will not play a program before the date listed in the Cart Chunk data. This option allows those automation system to play the program early. This can happen with a program playing on Saturday with a Sunday date.

Cart chunk  
☒ keep cartchunk  
☒ cutID clear (for A.V.)  
☐ cutID from amb-os name  
☐ cutID is lcl filename  
☐ lcl filename is CAT+cutID  
☐ default cutID  
☐ 5-day min expire date  
☐ start date = xfer date

## Backup and Notifications Settings

**Do not backup to FTP** disables the Amb-OS User Interface from doing the weekly backup of file settings to the Amb-OS ftp site. Leave this option unchecked to protect the system from losing settings in the event of a system failure as long as the computer running the Amb-OS User Interface has an Internet connection.

- ☐ Do not backup to FTP
- ☐ Do not send email
- ☐ Email failed
- ☐ Daily dest dir cleanup

**Do not send email** prevents the Amb-OS User Interface from [sending emails](#) requested by Amb-OS technicians for troubleshooting purposes. Allowing [emails](#) to be sent helps Amb-OS technicians resolve issues faster. Leave this option unchecked unless the computer running the Amb-OS User Interface does not have an Internet connection.

**Email failed** gets checked automatically if the Amb-OS User Interface failed to [send emails](#). The Amb-OS User Interface will not attempt to send any more [emails](#) with this box checked. After correcting the problem, clear the box to allow the Amb-OS User Interface to resume [sending emails](#).

**Daily dest dir cleanup** removes programs from the [destination directory](#) if the program no longer exists on the [AMR-100](#). It helps prevent the destination directory from becoming filled, which can prevent programs from transferring. The [destination directory](#) can be cleaned manually by using the “[Cleanup dest folder](#)” in the “[Tools](#)” menu.

## Temp folder

When [converting](#) programs from MP2 to WAV, the Amb-OS User Interface needs a location for the temporary files used in the conversion process. This option directs the Amb-OS User Interface to a specific directory. If left empty, the Amb-OS User Interface uses the default Windows® temporary file location. Pick a location that has several gigabytes of space to insure there is enough room to do conversions. If the drive does not have the space, conversions will fail and programs may not be transferred.

Temp folder:

Select a directory by clicking on the “Browse” button to open dialog box. To create a new folder, use the “Make New Folder” button enter the name of the new directory.

## WARNING

**If you pick a network drive, be sure the destination computer is always on and the drive is always available to prevent conversions from failing.**

## Save/Cancel

Click on Save to keep the settings and Cancel to ignore any changes. Either option exits. Clicking on the close window “X” has the same effect as clicking on the Cancel button.

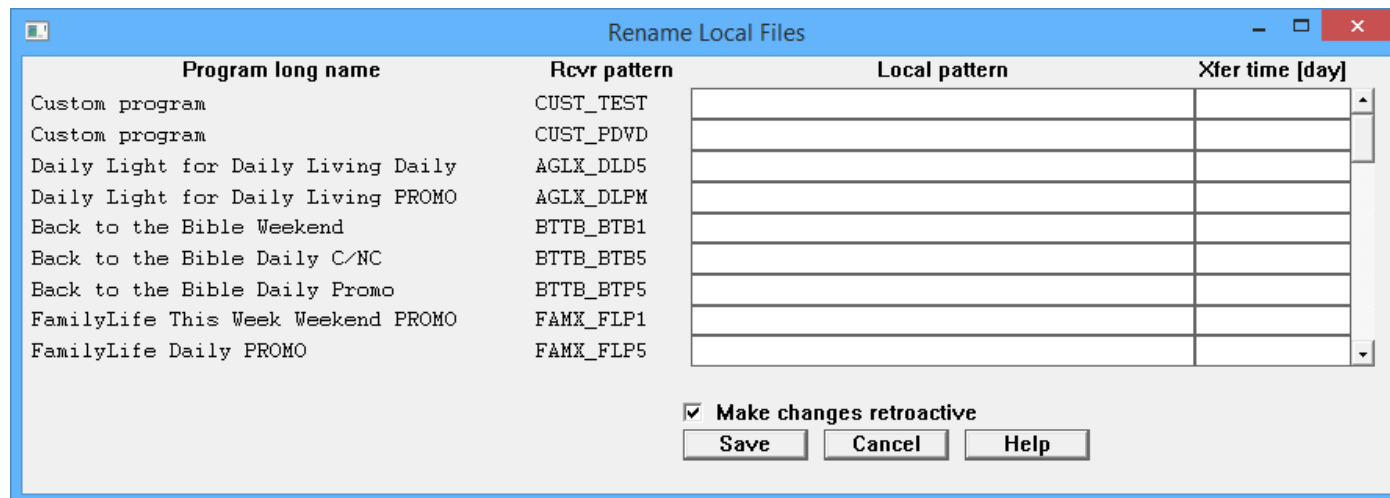

## WARNING

**Selecting “Cancel” discards changes and revert to the previous settings.**

## Top Menu Descriptions

### Rename Files

The programs on the [AMR-100](#) have [names](#) that include the date of the file. This utility programs to get custom names when transferred. Programs can also be scheduled to transfer at a specific time.

Program long name	Rcvr pattern	Local pattern	Xfer time [day]
Custom program	CUST_TEST		
Custom program	CUST_PDWD		
Daily Light for Daily Living Daily	AGLX_DLD5		
Daily Light for Daily Living PROMO	AGLX_DLPM		
Back to the Bible Weekend	BTBT_BTBI		
Back to the Bible Daily C/NC	BTBT_BTBI		
Back to the Bible Daily Promo	BTBT_BTPI		
FamilyLife This Week Weekend PROMO	FAMX_FLP1		
FamilyLife Daily PROMO	FAMX_FLP5		

☒ Make changes retroactive

Save Cancel Help

### Headings

**Program long name:** This is the name of the program used by the provider of the program.

**Rcvr pattern:** This is first nine characters of the [Amb-OS name](#) of the program on the [AMR-100](#) receiver.

The entire file name description is in the “[Program Naming Convention](#)” section in the [Appendix](#).

All the programs the [Program Listing](#) section in the [Appendix](#).

**Local pattern:** The name the program will have after transferring. Without a pattern, the program will transfer with the [Amb-OS system name](#).

**Xfer Time [day]:** Defines when a program is transferred; both by both the time and day relative to the air date of the program. Without a time in the “[Xfer time \[day\]](#),” the program needs to be transferred [manually](#), unless the “[Miscellaneous Transfer](#)” box is checked to transfer it [automatically](#).

**Make changes retroactive:** Checking this applies changes to programs in the [queue](#) (arrived, but not transferred). Without checking the box, any changes made will be applied to new programs arriving after the changes were made.

**Save/Cancel:** Saves the changes and “Cancel” reverts to the previous settings.

**Help:** Shows you the options for renaming and transferring.

### Filename is CAT+cutID Message

The message “First 3 letters of lcl pattern will be used cartchunk Category” when the [option](#) is checked in the “[System info.](#)”

Program long name	Rcvr pattern	Local pattern	Xfer time [day]
Back to the Bible Weekend	BTTE_BTBI		
Back to the Bible Daily C/NC	BTTE_BTBS	BTB1225	
Back to the Bible Daily Promo	BTTE_BTPI		

First 3 letters of lcl pattern will be used as cartchunk Category

☒ Make changes retroactive

Save Cancel Help

Thus in the local pattern line, BTB1225 would have “BTB” in the category field and “1225” in the cut ID field of the cart chunk data. The filename on the local computer would be BTTB1225.

### General information about local patterns and transfer times

If using the same name for a program everyday, timed transfers protects the current day’s program by controlling when the new program is transferred. [Timed transfers](#) can prevent the next day’s program overwriting the current day’s program if it arrives before current day’s program airs.

#### WARNING

Using the same name for a program everyday could result in the current day's program being overwritten by a new program if no transfer time is entered.

Programs are transferred after being completely being received so no partial programs get transferred. If a file arrives less than 24 hours after the scheduled transfer time, it will be transferred as soon as it arrives.

#### WARNING

If the [AMR-100](#) is not attached to the Internet and data packets are missed, the missing packets cannot be received from the uplink server and the file will not transfer. Contact Amb-OS (877-262-6728) to have it retransmitted.

## Local Pattern

To change the name of a program, click in the box next to the program to change and enter the name to use when transferring. To change the name of the “Bible Minute” to “BTB-Min,” enter “BTB-Min” in the local pattern.

### NOTE

Without a rename pattern, the program will keep the Amb-OS system name.

## Options

### Directory changes:

Programs can be put in different directories by putting a directory name in front of the program name in the “[Local pattern](#).” Without specifying a directory, the directory will be the [destination directory](#). A different directory, sub-directory, drive or computer can be used.

### Examples

#### Parameters

[destination directory](#) = “D:\ambos\files” (D: is the default drive)

BTTB = a directory, but it can be any directory name

Bible-Min = the local pattern, but it can be any pattern including [variables](#)

Local pattern	Result – program is put in:
Bible-Min	D:\ambos\files
BTTB\Bible-Min	D:\ambos\files\BTTB
D:\BTTB	D:\BTTB
\Bible-Min	D:\
E:\BTTB\Bible-Min	E:\BTTB
\\ambos\BTTB\Bible-Min	Computer named “ambos” in \BTTB

If the specified directory does not exist, the Amb-OS User Interface reports a [system error 03](#) (“The system cannot find the path specified”) in the “[Activity log](#).”

### WARNING

The directory specified in the local pattern must exist or the Amb-OS User Interface will not be able to transfer the file.

## Rename Variables:

The variables used in renaming files allow customized file names to correspond to days, dates or parts. The variables can go anywhere in the local pattern (before, after and in the middle). The options are listed below. Except for multiple part file options, the variables can be used with [FTP transfer local file name](#).

### WARNING

**Do not use a file extension in the local pattern box. If you do not want the default extension, change it in the “file output extension” option.**

[Amb-OS program name](#): FOFT\_ODY5\_02-18-14\_01-03.MP2

Variable	Meaning
x	Do not transfer the program
%m	The two digit month will be added to the file name: “02”
%d	The two digit day will be added to the file name: “18”
%y	The year of the air date in YY format will be added to the file name: “14”
%w	The day of the week in two letter format will be added to the file name: “Tu”
%3	The day of the week in three letter format would be added to the file name: “Tue”
%n	The numerical day of the week beginning with 1 (Sun. = 1, Mon. = 2... Sat. = 7) would be added to the file name
%z	The numerical day of the week beginning with 0 (Sun. = 0, Mon. = 1, Tue. = 2... Sat. = 6) would be added to the file name
%j	The Julian date or the number of the day of the year. An air date of 01-01-14: adds “001” to the file name An air date of 12-31-14: adds “365” to the file name An air date of 12-31-16: adds “366” to the file name (Leap Year)
<b>Multiple Part Programs</b> <b>(without either option, the program is transferred as one file)</b>	
%p	the part number of the program with two digits Part one has “01” added to the file name Part two has “02” added to the file name, etc. A single part file has nothing added to the file name
%1	The part number of the program with a single digit Part one has “1” added to the file name Part two has “2” added to the file name, etc. A single part file has nothing added to the file name

Multiple variables can be used for the same file and can have separators between them.

%m-%d\_%p would have 02-18\_01 in the name of the file.

The program will either have the normal format extension – WAV for wave files and MP2 for MP2 files. However, if a [custom extension](#) was specified, then the program will have that extension when it is transferred. The “[FTP transfer](#)” cannot change the MP3 extension regardless of the [custom extension](#).

## Examples

Program: FOTF_FOF5_05-06-14_01-01		
Pattern	Name	Comment
FOFD	FOFD.MP2	Program has the same name everyday and would overwrite previous programs.
FOFD%m%d	FOFD0506.MP2	The month and day are added to the program name.
FOFD%3	FOFDWED.MP2	The three letter name of the broadcast day are added to the program name.
Program: FOTF_ODY1_05-22-14_01-03		
Pattern	Name	Comment
ODY_W-%p	ODY_W-01	Part one has “-01,” part two has “-02” and part three has “-03” at the end of the program name.
ODY_W-%m-%d_%l	ODY_W-05-22_1	The month and date are added and the program part number is added with part as “-01,” part two as “-02” and part three as “-03” at the end of the program name.
ODY_W-%m-%d	ODY_W-05-22	The month and date are added and the program without a part number, because no part number variable was added.

If “[CutID is lcl filename](#)” is checked in the “[System info](#)” then the entered program name is used as the Cart Chunk cutID. If the option “[lcl filename is CAT+cutID](#)” is checked in the “[system info](#),” then the first three characters of the [filename pattern](#) is put into the Cart Chunk data as the category and the remaining characters are put in as the cut ID.

## Xfer Time [day]

### General Information

The “[Xfer time \[day\]](#)” dictates the program transfer time in 24 hour format (00:00 – 23:59) and, optionally, a [day offset](#) to determine the day the program will be transferred in relative to the air date. Leaving the “[Xfer time \[day\]](#)” field blank means programs have to be [transferred manually](#) unless the “[Enable misc transfers](#)” box is checked.

### Scheduling a program transfers

Transfer times protect programs from being overwritten if same program name is used in the “[rename pattern](#).” For example, if using “IFL-Daily” for all programs and the new program arrives at 8:00 am and the program airs at 9:00 am, that program could be replaced when the new program arrives. By putting in a [transfer time](#) after the program finishes airing (9:30 am or later) avoids this problem.

The Amb-OS User Interface automatically transfers a program if the program arrives less than 24 hours after the scheduled transfer time. A program arriving at 11:00 pm with a scheduled transfer at 8:00 pm will be automatically transferred. A program arriving later than 8:00 pm a day after the scheduled transfer would have to be [transferred manually](#).

## WARNING

**Scheduling transfers before programs are successfully received can result in unpredictable results.**

[Amb-OS program transmission times](#) listed in the “[Amb-OS Program Listing](#)” table in the “[Appendix](#)” are the queue times of the program. [Program transmission times](#) can be delayed from the queue times based on the number programs scheduled for transfer. Additionally the “[Amb-OS Program Listing](#)” table also lists the number of days in advance of the air date the Amb-OS system sends the program.

## Time Parameters

Time should be entered as HH:MM in 24 hour format without the seconds. Use 03:00 for 3:00 AM and 15:00 for 3:00 PM. Times range from 00:00 (the morning of the current day) to 23:59 (one minute before midnight). Entering 11:00 would transfer the file at 11 AM local PC time.

Time must be entered with only the hour and minutes. Entering seconds with the time will create an error.

### WARNING

**Entering the seconds (11:15:20) results in an error.**

Programs arriving less than 24 hours after the scheduled transfer time will be automatically transferred after the [AMR-100](#) has successfully received the program. Programs arriving more than 24 hours after the scheduled transfer time will have to be [transferred manually](#).

## Day Offset Parameters

The [day offset](#) is the number of days before (-1, -2) or after (+1 or 1, +2) the air date of the program to transfer. Without a [day offset](#) specified, the “[After 12P \(noon\) Rule](#)” applies to the transfer. Times before 12:00 PM (noon) transfers the program on its air date. Schedules on or after 12:00 PM (noon) transfers the next day’s program assuming the program was successfully received.

The [day offset](#) must be entered with a transfer time. “11:00 -1” would transfer the file at 11:00 AM local PC time one day before the air date.

### WARNING

**The day offset parameter must be entered with a transfer time.**

## Day offset description for transfers

[Day offset](#) description

- 2 = two days before the air date of the program
- 1 = the day before the air date of the program (prefeed)
- 0 = current day
- 1 or +1 = the day after the air date of the program
- 2 or +2 = 2 days after the air date of the program

### WARNING

**The day offset parameter should not be greater than the number of days in advance a program is sent from the Amb-OS satellite system to avoid missing a scheduled transfer by more than 24 hours.**

## Examples of [day offset](#)

Times with a [day offset](#) specified – nullifies the “[After 12 PM \(noon\) rule](#)”

06:00 -1 = Transfers a day before the air date

15:00 0 = Transfers the same day’s file at 3 pm even though the transfer is scheduled after noon.

Times with no [day offset](#) specified – the “[After 12 PM \(noon\) rule](#)” applies

06:00 = Transfers the same day’s program (same as using 0 as the [day offset](#))

15:00 = Transfers the next day’s program (same as using -1 as the [day offset](#))

## File transmission time vs. queue time

When considering a scheduled time, check the program’s queue time. Programs normally get sent at the queue time listed in the [program table](#); however, server traffic may delay the actual satellite transmission time. The [program table](#) lists queue times in Eastern Time. Avoid transfer errors by scheduling transfers an hour after the queue time.

### WARNING

**The queue time may not be the transmission time. The queue time is the scheduled transmission time. The actual transmission time will be later if a previously scheduled program has not finished transmitting at the queue time. The program will be sent immediately after the previous program(s) have completed transmitting.**

Because the Amb-OS satellite system sends programs sequentially, the next program in the queue cannot be sent until the previous program has finished transmitting. While the Amb-OS queue schedule has been designed to space programs to avoid delays in program transmission; however, programs can still be delayed. Check the actual arrival time of program in the [activity log file](#) to verify the actual transfer time.

Activity log → activity12Dec.txt

☒ Make changes retroactive

Save Cancel Help

This section assumes that the [output format](#) will be MP2 and not converted to a WAV file. With the [output format](#) selected as a WAV, everything will be the same but the files will a wav file and have the WAV extension when transferred unless a special [file extension](#) was used.

The screen shot above illustrates the following actions:

MM-DD-YY is the air date of the program.

CUST\_TEST and CUST\_PDVD will not be transferred, because of the “x” in the local pattern.

AGLX\_DLD5 will be transferred on its air date, because no [day offset](#) is entered, so it follows the “[After 12 PM \(noon\) rule](#).” It will be named “DLDL-15.MP2” if the air date is on the fifteenth of the month. It will also be put in the “\AMB-OS” directory on the root drive of the [destination directory](#).

AGLX\_DLPM will be transferred at midnight local time two days before the air date with the default [Amb-OS system file name](#) (AGLX\_DLPM\_MM-DD-YY\_01-01.MP2).

AIMG\_AKH5 will be transferred at 5:00 AM on the air date of the program with the default [Amb-OS system file name](#) (AIMG\_AKH5\_MM-DD-YY\_01-01.MP2).

BTTB\_BT1 will be transferred at 11:00 AM local time as “BTTB-Wkd.MP2” five days before the air date. If the program arrives only three days before the air date, the program will have to be [manually transferred](#), because it would arrive more than 24 hours after the scheduled transfer time.

BTTB\_BT5 will be transferred as “BTTB1225.MP2” at 3:00 PM Local PC time and it will transfer the same day’s program, because of the “-0” parameter bypassing the “[After 12 PM \(noon\) rule](#).”

BTTB\_TBM5 will be transferred at 3:00 AM local time as “BTB-Min-11.MP2” if the air date is the eleventh of the month.

## Multiple Part Files

A multi-part file has the number of parts after the “program long name.” Using %p or %1 in the [local pattern](#) puts the part number in the local name.

%p – *Program-Name-01, Program-Name-02, Program-Name-03*, etc.

%1 – *Program-Name-1, Program-Name, Program-Name-3*, etc.

The “-” has to put in the local pattern: *Program-Name-%p* or *Program-Name-%1*.

No designation – *Program-Name* combines all the parts and transfers it as a single program.

**Example** (Love worth Finding Comm -3 parts)

Program long name	Rcvr pattern	Local pattern	Xfer time [day]
Love Worth Finding Wkend 30min	LWFM_LW31		
Love Worth Finding NC	LWFM_LWF5		
Love Worth Finding COMM -3 PARTS	LWFM_LWF5%p	LWF-Daily-%p	02:00 -2

Local Pattern – LWF-Daily-%p

Xfer time [day] – 02:00 -2

It will be transferred at 2:00 AM local time, two days in advance and as three parts.

First part: LWF-Daily-01.MP2

Second part: LWF-Daily-02.MP2

Third part: LWF-Daily-03.MP2

Just having “LWF-Daily” in the [local pattern](#) (no %p or %1), it will be transferred as a single program.

LWF-Daily.MP2

## Making changes retroactive

Checking this box applies the [rename pattern](#) changes to any files currently on the [AMR-100](#), but have not been transferred. Leaving the box unchecked will only apply the new name to programs received later.

## Saving changes

After completing changes, click on “Save” to apply the changes.

**Save:** Saves the changes you have made.

**Cancel:** Ignores the changes you made and closes the window.

**Clicking** on the X in the upper left corner the window also cancels any changes.

## WARNING

**You must press Save after making any changes. Pressing Cancel or just closing the window discards any changes.**

## Playlist Editor

### General Description

This tool creates a playlist for the [AMR-100](#) receiver to play programs out of audio ports for on air or recording. Relay closures can be assigned to programs (see the AMR-100 Installation manual) for playback to communicate with an automation system.

Check the [queue time](#) for programs to make sure programs are not scheduled before being received. The [program table](#) at the end of this manual in the “[Appendix](#)” lists programs with their queue time. The most current table is online at <http://www.amb-os/programs>. Transmission times may be different than the queue time ([file transmission versus queue time](#)).

### WARNING

**The queue time may not be the transmission time. The queue time is the scheduled transmission time. The actual transmission time will be later if a previously scheduled program has not finished transmitting at the queue time. The program will be sent immediately after the previous program(s) have completed transmitting.**

### Triggers

At this time, triggers cannot be entered into the playlist by the Amb-OS User Interface. To use triggers, create a playlist with the Amb-OS User Interface playlist editor, [write the playlist](#) to a local drive and then edit the playlist with a plain text editor (Notepad®) or with the [Stand-alone Playlist Editor](#) (<http://www.amb-os.com/pdfs/playlisted-rev005.zip>). The User Interface (UI) Software Playlist Manual (available at <http://www.amb-os.com/support.html>) explains the playlist commands in greater detail.

The playlist editor uses the [receiver](#) specified in “[System Info](#)” section and automatically pulls in the playlist on the [AMR-100](#) for editing. The Amb-OS User Interface [saves](#) it back to the [AMR-100](#).

### WARNING

**After editing the playlist outside of the Amb-OS User Interface playlist editor, do not bring the playlist back into the Amb-OS User Interface, because it can make unwanted changes.**

## The buttons

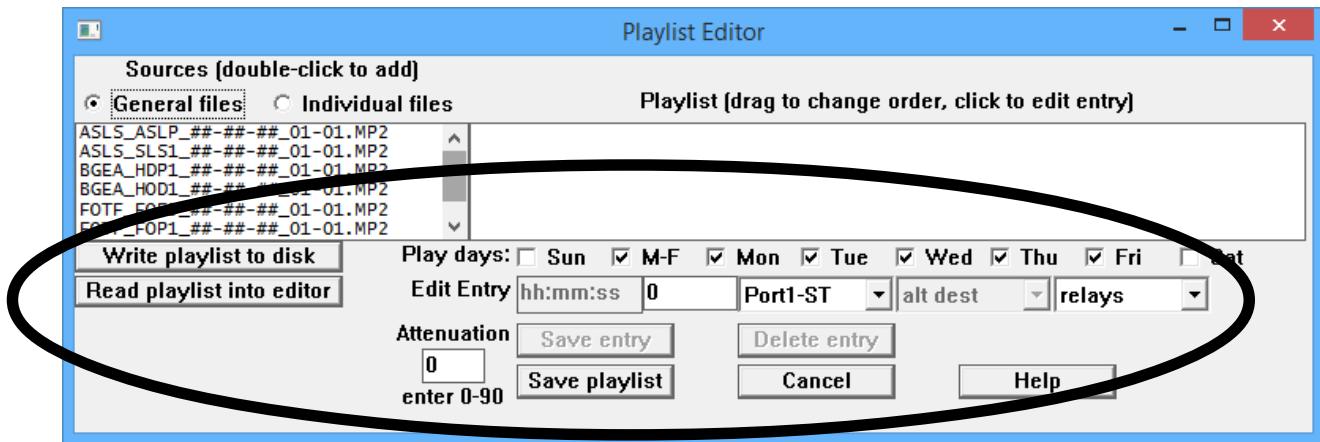

The first time the playlist editor opens no programs appear in the playlist window, but all available programs on the [AMR-100](#) are listed in left window. Programs are listed in the “wild card” format, which uses “##-##-##” in the filename in place of the air date as specified in the [Amb-OS system naming convention](#). The “wild card” files allows programs to be played back automatically on the air date of the program without having to change the playlist everyday. Optionally, you can specify a [single date](#). See the [Amb-OS system naming convention](#) section in the “[Appendix](#).”

**General files/List individual files:** All available programs can be listed or by the actual [Amb-OS System name](#) on the [AMR-100](#).

**General files** lists all available programs using the “wild card” (##-##-##) in place of the date.

**Individual files** lists only the programs on the [AMR-100](#) with with the air dates (05-27-14) in the program name

**[Write playlist to disk](#):** Saves the playlist to a file on a computer for archiving, backup or editing.

**[Read playlist into editor](#):** Loads a playlist into the editor from a computer for editing. It can then be saved to the [AMR-100](#), but it will overwrite the playlist on the [AMR-100](#).

**[Save entry](#):** Saves the entry to the [AMR-100](#). If this button is not clicked, the changes to the playlist will not be saved to the [AMR-100](#).

**[Delete entry](#):** Removes an entry. Highlight the desired program and click on “[Delete entry](#).”

**[Attenuation](#):** This reduces the audio level of programs as they are played. The affects all programs played from the [AMR-100](#) and not just the entry being edited.

**[Save Playlist](#):** Click this button to save the playlist to the receiver. The playlist can be saved to a local disk and not the [AMR-100](#).

**[Cancel](#):** Used to discard changes made to the playlist.

**[Help](#):** This brings up the help menu.

### NOTE

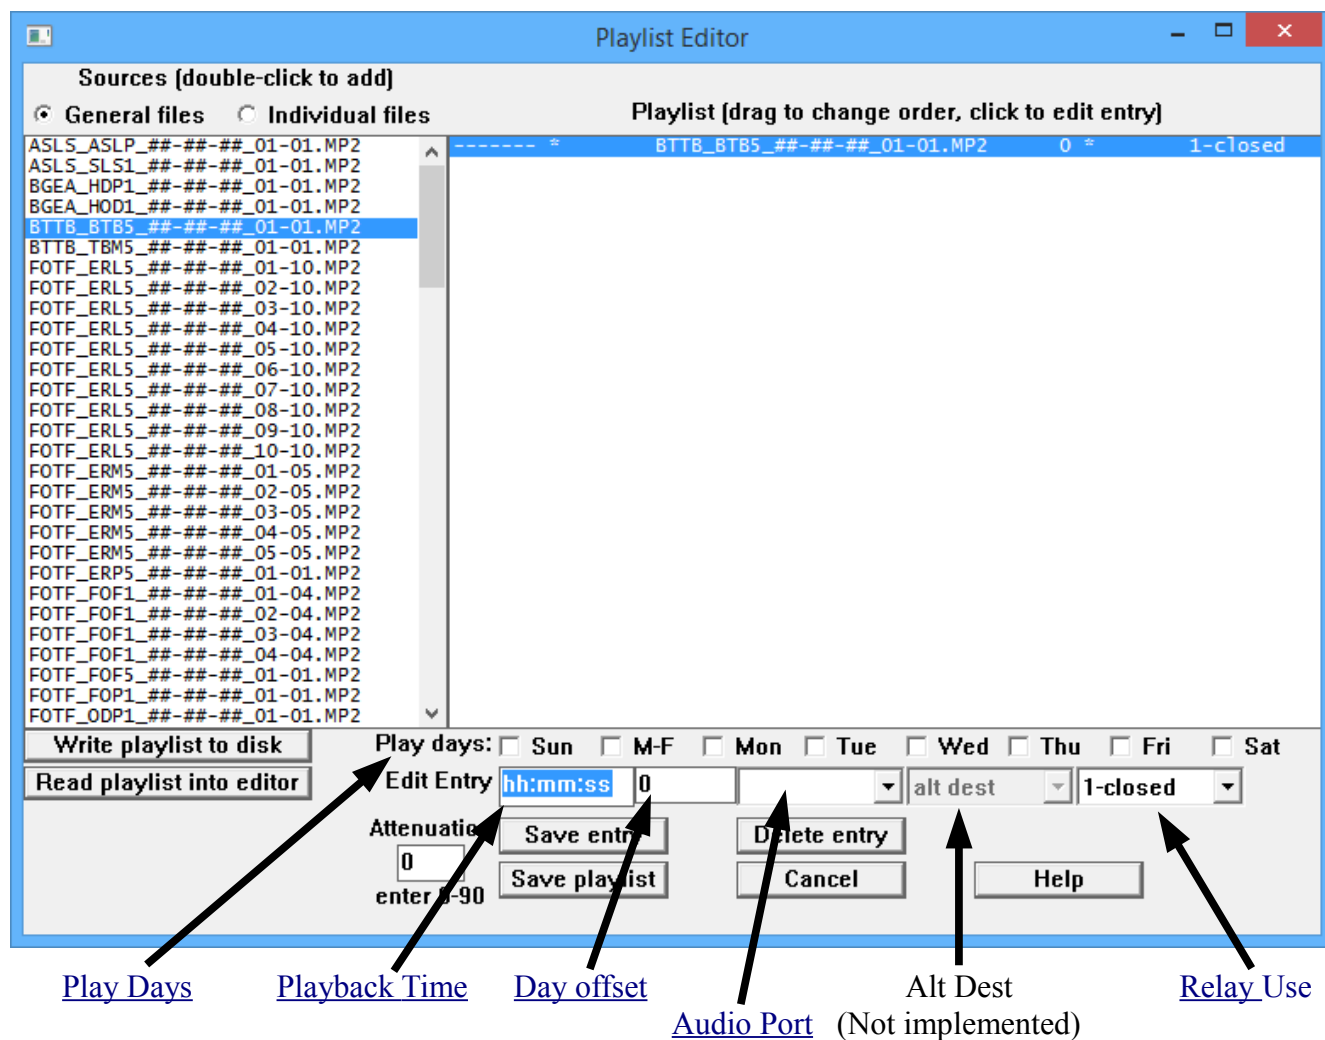

The attenuation settings affects all programs played from the [AMR-100](#)'s audio ports and not just the program being edited.

## Creating a playlist

The basic steps to create a playlist:

1. Double click on the program to play in the window on the left. This brings the program to the Playlist window on the right. “[Save entry](#),” “[Delete entry](#)” and “[Save playlist](#)” become active.
2. Click on the program in the Playlist window to edit the playback parameters. This is done at the bottom.
3. Change the playback parameters and click on “[Save entry](#)” to save the changes.
4. Repeat steps 1-3 to for each program to add to the playlist.
5. Click on “[Save playlist](#)” to save the playlist to the [AMR-100](#).

Play days: ☐ Sun ☒ M-F ☒ Mon ☒ Tue ☒ Wed ☒ Thu ☒ Fri ☐ Sat

**Play Days:** Check the days that the program will play. Selecting M-F checks the Mon, Tue, Wed, Thu and Fri boxes; however, each day can be deselected individually. Clearing the M-F box also clears the each weekday box. To play a program on Saturday and Sunday, each one of those must be selected.

After saving the entry, the playlist editor shows which days a program will play by putting the first letter of the day at the beginning of the entry.

“-mtwtf-” – Program airs weekdays:

“-m-w-f-” – Program airs Mon., Wed. and Fri.

“-----s” – Program airs Saturday

“s-----s” – Program airs Saturday and Sunday

“\*” – Program has no time as part of a multiple part program

```
-mtwtf- 05:30:00 BTTB_BTBS
s----- 09:00:00 FOTF_ODY1
s----- *      FOTF_ODY1
s----- *      FOTF_ODY1
----t-- 23:15:00 FRCA_WW1
```

**Playback Time:** This sets the playback time of the program. It must be entered in 24 hour format and can be down to the second. 05:00:00 airs at 5:00 A and 17:00:00 airs at 5:00 P. A time must be entered for each program. Only the first part of [multiple part](#) programs needs a time if all the parts are to play consecutively without a break. See “[Playing Multiple Part Files](#).” To play the same program multiple times, see “[Multiple Airings](#).”

Edit Entry

If a program does not have time, it will be treated as the next part of the previous program. Scheduling “Grace to You” at 11:30 and then putting in “Insight for Living” after that without a time, would play “Grace to You” at 11:30 and then “Insight for Living” immediately afterward without a break.

### WARNING

**Without a playback time for subsequent programs in the playlist, the first program plays at the specified time and following program(s) play right after each other without a break as a multiple part program.**

**Day offset:** Programs can be played before (“+”), on (“0”) or after (“-”) the air date.

Playlist [day offset](#)

Edit Entry

1 or +1 plays the program one day before the air date (a prefeed).

0 plays the program on the air date.

-1 plays the program 1 day after the air date (playing a file on Sunday that has a Saturday air date).

### WARNING

**The playlist day offset is opposite from the [renaming files day offset](#).**

(See the “[Playlist Day offset](#)” section in the “[Appendix](#).”)

### NOTE

**Playlists do not follow the “[After 12PM \(noon\) Rule](#).” Without a day offset, the [AMR-100](#) will play the current day’s program regardless of the scheduled time.**

**Audio Port:** This selects the audio port to use for playback. The [AMR-100](#) has two ports and can play back in either stereo or mono.

## WARNING

**Leaving the Port blank (the default when starting to edit an entry) puts in an erroneous port and no program will play.**

Port options:

Port1-ST: Plays out the left and right of Port 1 – a mono program plays out L and R

Port1-L: Plays out the left side of Port 1 only in mono – a stereo program is mixed

Port1-R: Plays out the right side of Port 1 only in mono – a stereo program is mixed

Port2-ST: Plays out the left and right of Port 2 – a mono program plays out L and R

Port2-L: Plays out the left side of Port 2 only in mono – a stereo program is mixed

Port2-R: Plays out the right side of Port 2 only in mono – a stereo program is mixed

Maximum number of programs that can be played:

2 programs: Port 1 in stereo and port 2 in stereo

3 programs: Port 1 in stereo and port 2 playing a mono feed on the left and the right channels

3 programs: Port 1 playing a mono feed on the left and the right channels and port 2 in stereo

4 programs: Both ports playing separate mono feeds on the left and right channels

For a full description of the audio ports and limitations see the AMR-100 Installation manual.

**Relays:** This assigns a relay and its action to a program. A relay can be closed for the entire length of the program or it can be pulsed (close for one second and then open) at either the beginning OR the end of a program. The Amb-OS User Interface playlist editor cannot put in multiple relay actions for the same entry. Use the [Stand-alone Playlist Editor](#) to put in multiple relay actions for a single program entry. Download the [Stand-alone Playlist Editor](#) (<http://www.amb-os.com/pdfs/playlisted-rev005.zip>) from <http://www.amb-os.com/support.html>.

The drop down menu allows choosing the relay and action. Remember, relays 5 and 6 are normally used for time sync and alarms. Unless you have disabled those on your [AMR-100](#) receiver, do NOT choose those relays. See the [AMR-100](#) User Manual available from <http://www.amb-os.com/support.html> to enable to disable relays 5 and 6 from their default function.

The relay options are (“X” = the relay number):

relay: No relay activity for that file

X-close: close the relay for the entire length of the program and open it at the end of the program

X-start: pulse the relay at the beginning of the program

X-end: pulse the relay at the end of the program

**Attenuation:** Sets the amount of attenuation (in dB) for all programs during playback. Enter “0” (full volume) to “90” (effectively silences the output) in integers. This only effects programs played out of the audio ports and it does not effect the transferred programs. No amplification can be made, because the gain on the receiver defaults to full volume.

Example: “6” drops the volume by 6 dB.

## NOTE

**Attenuation parameters changes all programs and it cannot be used for individual program playback.**

**Save Entry:** After completing changes for each program, click on “Save entry” or the changes will be lost.

## WARNING

Click on “Save entry” after every program or the changes will be lost.

**Delete Entry:** To remove a program from the playlist, highlight the entry to delete and press “Delete entry.” A deleted entry cannot be recovered. While, the “Cancel” button can be clicked and the playlist reloaded, that would also remove any previous changes.

## WARNING

“Delete entry” is immediate and no confirmation is asked.

## Multiple Airings

### Same day airings (different times)

Airing a program multiple times during the day, requires an entry for each time airing. Select the program for the first airing and modify the playback parameters and select [Save entry](#). Then double click on the same program to insert it into the playlist again and put in the new air time. The following illustration shows the program set to play at two different times.

### Different day airings (same times)

Prefeeds for daily programs may have to account for the weekend. Tuesday’s – Friday’s programs come on Monday – Thursday, but Monday’s program has to come on Friday or three days early. Even though the feeds play at the same time, the playlist needs two entries to account for the different [day offsets](#). Monday’s prefeed on Friday plays back three days early to skip Saturday and Sunday. The other prefeeds playback one day in advance. The same program has the same time, but two different [day offsets](#).

The following example shows the same program at the same time with different [day offsets](#).

Different days to play (M-Th & F only)

1 [day offset](#)

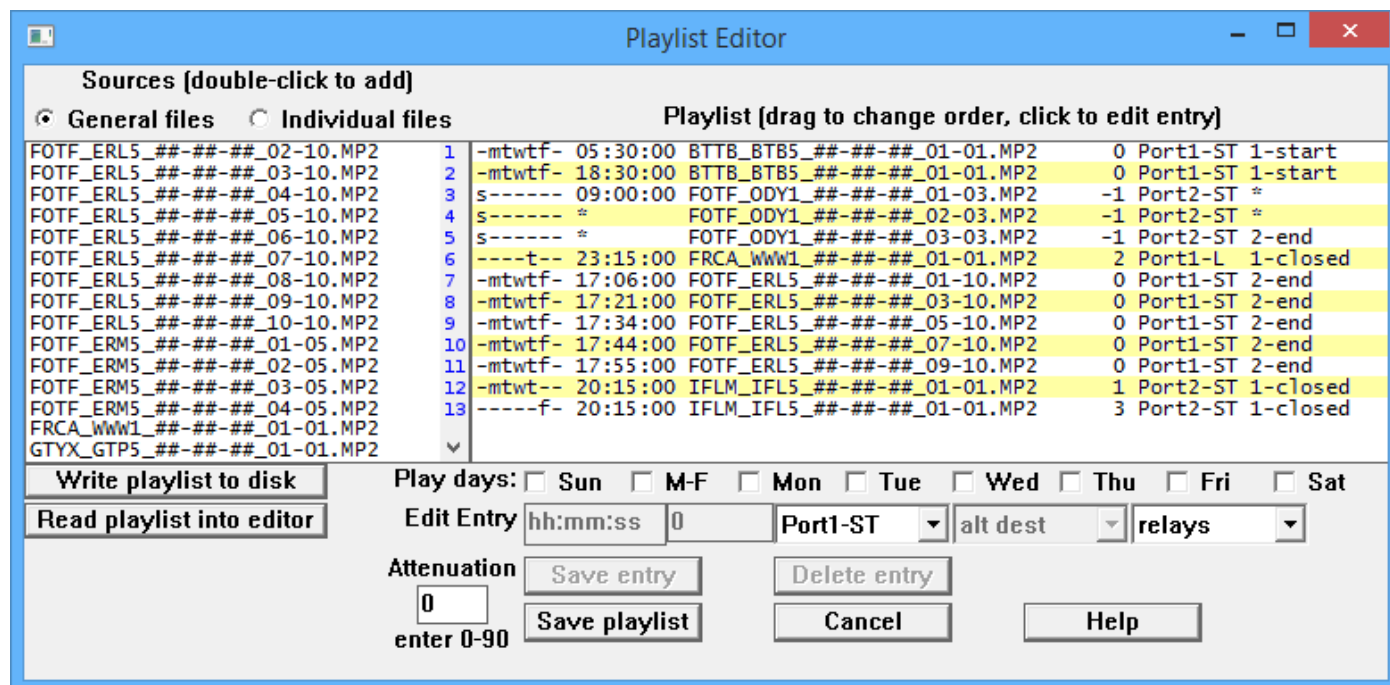

3 [day offset](#)

## WARNING

Not all programs feed enough days in advance to have a three [day offset](#). Check the feed days in the [Amb-OS program table](#) in the “Appendix.”

## Playlist Example

(Line numbers to the left and highlights are for illustrative purposes only)

Entry #1: Plays the current day's Back to the Bible every weekday at 05:30:00 in stereo and pulses relay #1 at the start of the program.

Entry #2: Replays the current day's Back to the Bible every weekday at 18:30:00 in stereo and pulses relay #1 at the start of the program.

Entries #3-5: Plays the [multiple parts](#) of Adventures in Odyssey beginning at 09:00:00 every Sunday in stereo out of port two and only part three pulses relay #2 when all three segments have finished playing. The [day offset](#) is "-1" for all segments, because the air date for the program is a Saturday and airing the program on Sunday means each one airs a day later.

Entry #6: Plays Washington Watch for recording two days early at 23:15:00 for recording in mono out of port 1-left channel. Relay #1 stays closes for the entire program playback.

Entries #7-11: Plays each segment of Everyday Relationships at a fixed time Monday through Friday and pulsing relay #2 at the end of each segment.

Segment 1 (part 1 of 10) plays at 17:06 and pulses relay #2 at the end of the program

Segment 2 (part 3 of 10) plays at 17:21 and pulses relay #2 at the end of the program

Segment 3 (part 5 of 10) plays at 17:34 and pulses relay #2 at the end of the program

Segment 4 (part 7 of 10) plays at 17:44 and pulses relay #2 at the end of the program

Segment 5 (part 9 of 10) plays at 17:55 and pulses relay #2 at the end of the program

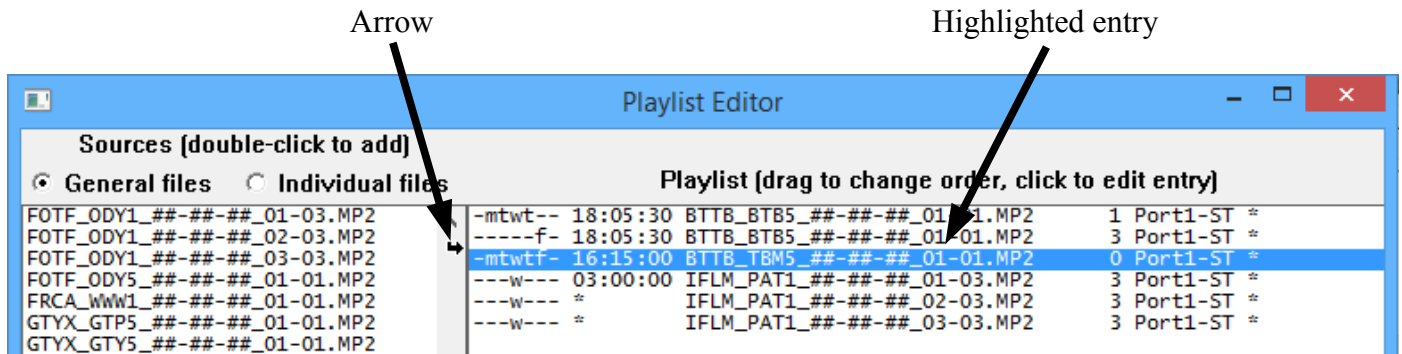

Entries #12, 13: Plays a prefeed of Insight for Living at 20:15:00 one day early on Monday through Thursday and three days early on Friday to account for the weekend. Each program pulses relay #1 at the end of the program.

### WARNING

**Day offsets in this example are used for illustrative purposes only. Verify the feed days in the Amb-OS program table in the "Appendix."**

## Rearranging Airings

For clarity or to move multiple part programs together, click on desired entry to move and then drag it to a new position. After highlighting the desired entry and starting to drag that entry, an arrow appears to the left of the playlist window showing where the entry will be placed after releasing the mouse button.

This allows entries to be organized by day (weekdays vs. weekends), by time or something else. By being able to rearrange entries, added events can be moved to keep them organized.

The order of the playback times does not matter, except for playing back [multiple part programs](#) in the correct order. Programs scheduled for 13:00:00 and 08:00:00 can be put in any order and they will still play at their scheduled times.

## Playing Multiple Part Files

To play a multiple part file as one file, put in the first part and give it a time then add the other parts without putting in times. The first part plays at specified time and the other parts will play in sequence after each part finishes. The playlist editor remembers the settings for previous entry ([day offset](#), [audio port](#) and [relay](#), but not the [time](#)) to help keep subsequent parts of a program consistent.

### WARNING

**The parts will play in the order they are listed. The first part, with the time, has to be first, the second part has to be second and the third part has to be third and so forth.**

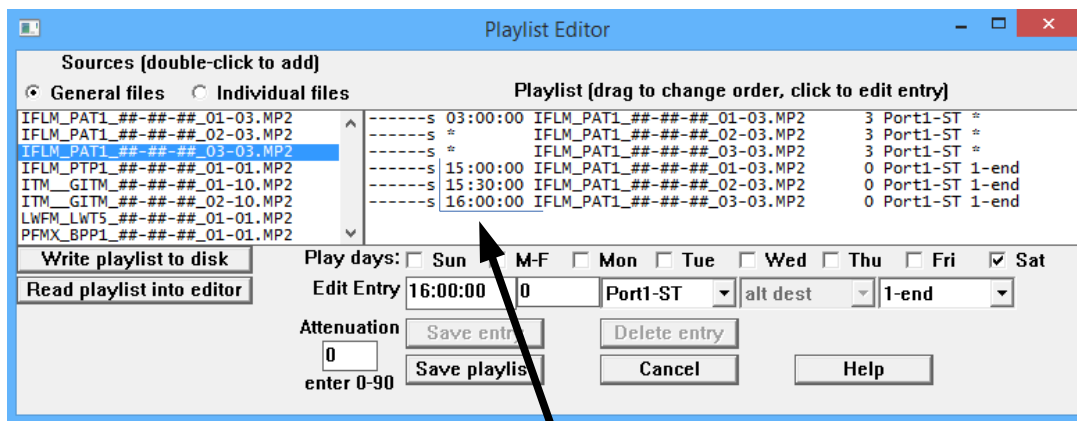

To close a relay at the end of the entire program, add the relay closure for the last segment and not for the previous segments.

### WARNING

**To make sure a relay closes on the last segment, be sure to not have a relay listed for the previous parts. Select “relays” to clear it.**

The process is:

1. Double click on the first segment.
2. Enter in a time for it to playback, [day offset](#) (defaults to 0) the port and, if wanted, a relay action
3. Click on “[Save Entry](#)”
4. Double click on the second segment.
5. Do not put in a time, verify the [day offset](#) (defaults to 0) the port and, if wanted, a relay action
6. Click on “[Save Entry](#)”
7. Double click on the third segment.
8. Do not put in a time, verify the [day offset](#) (defaults to 0) the port and, if wanted, a relay action
9. Click on “[Save Entry](#)”

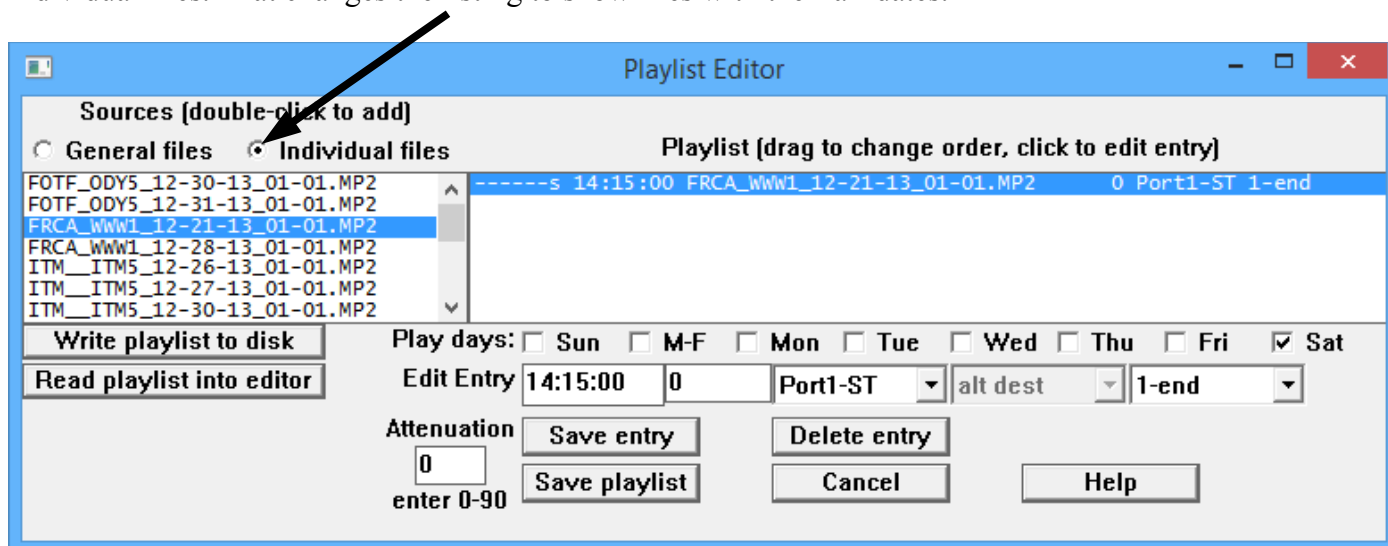

The second set of programs (IFLM\_PAT1) at 15:00, 15:30 and 16:00 (lines are for illustrative purposes only) shows recording multiple part programs as individual segments. Playing a multiple part program as individual segments from the [AMR-100](#) and inserting spots between the segments, can be problematic if the segments have different lengths each day. If the segments vary from day to day, the playlist would have to be changed each day the program airs. To avoid that frustration, record the segments at fixed times and have the automation system put in the spots between the segments.

## Creating a one time playback

To play a program once on a specific day, change the window to list actual files by clicking on List individual files. That changes the listing to show files with their air dates.

Use the same process as [creating a playlist](#) with the “wild card” dates. Double click on the program to air, then highlight it in the “Playlist” window and enter the [time and other information](#). Then click on “Save entry” and that file will only play once on the date of the file. A [day offset](#) of “+1” plays it on 12/22 and “-1” plays it on 12/20. This can be useful for one time holiday programs.

The entry will stay in the playlist until manually deleted. Of course, the program will never play again, because the date has passed and will never repeat.

## Saving the playlist

### Save Playlist

After finishing the playlist, click on “Save playlist” and the playlist will be saved to the [AMR-100](#) and it exit the playlist function.

This only saves the playlist to the [AMR-100](#) receiver and not to another computer. Use the “[Write playlist to disk](#)” to save a backup playlist.

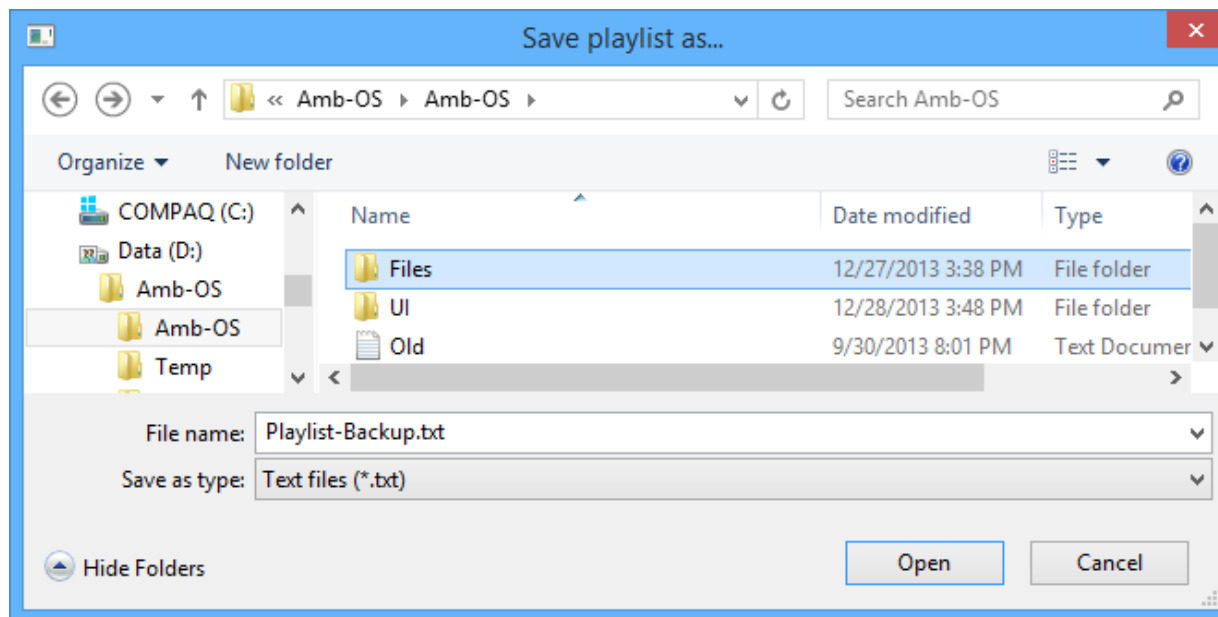

### Cancel

Pressing “Cancel” or the close window “X” in the upper right of the playlist editor window after making changes opens a confirmation window asking whether or not to save the playlist. Pressing “No” will discard the changes. Pressing “Yes” saves the changes to the [AMR-100](#), but not to another computer.

## Write playlist to disk

To save the playlist to a local computer, click on Write playlist to disk. Select a folder and specify a name of the playlist in the “Save playlist as...” dialog box.

The file is stored as a standard text file and can be edited using a text editor or the “Stand alone playlist editor.” The playlist manual and the “[Stand-alone Playlist Editor](http://www.amb-os.com/support.html)” are available at <http://www.amb-os.com/support.html>. The syntax and construction of a playlist can very involved, so always save a copy of the playlist that has not been modified.

Saving the playlist to a disk can be useful to work on a playlist and check it before saving it to the [AMR-100](#). If time does not permit making all the changes, saving the playlist to a disk and *not* saving it the [AMR-100](#), allows editing a playlist without changing the operation of the [AMR-100](#) until the playlist is complete. Click on [Cancel](#) after saving the playlist to a computer to exit without saving the playlist to the [AMR-100](#).

After finishing the changes, keep a copy of the playlist on a computer by clicking on “[Write playlist to disk](#)” and then pick a directory and file name. After that, click on [Save playlist](#) to save the playlist on the [AMR-100](#).

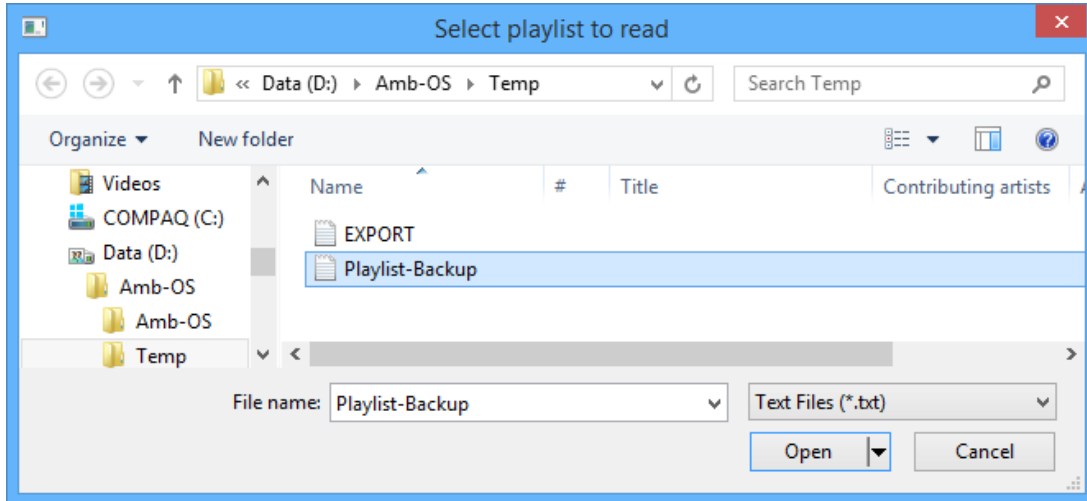

### WARNING

**Saving the playlist to a disk *does not* save it to the AMR-100. You must click on “Save playlist” to save the playlist to the AMR-100.**

### **Read playlist into editor**

After saving a playlist on another computer using the “[Write playlist to disk](#).” Click on “Read playlist into editor” and select the saved playlist and continue editing.

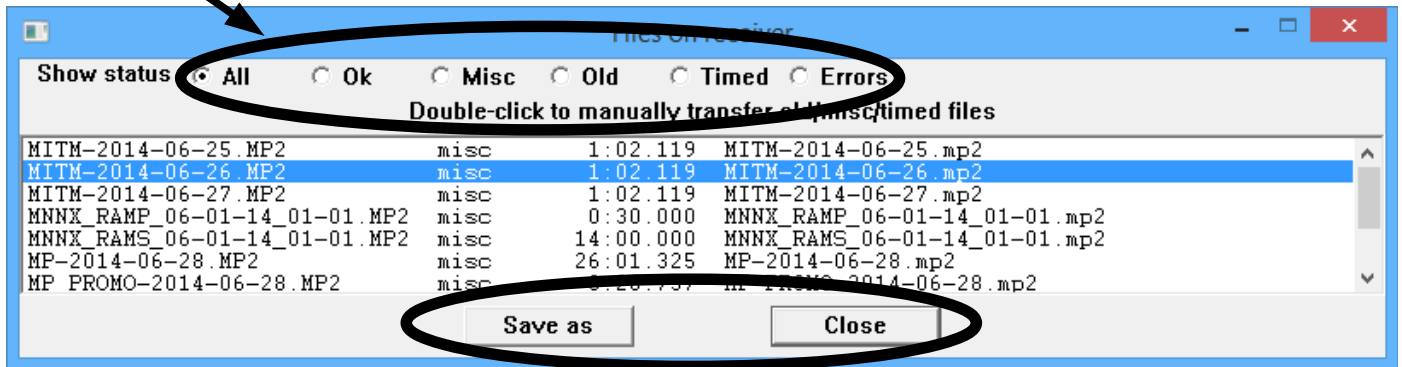

### **WARNING**

The “Read playlist” function does not have any syntax checking options. If a playlist has been modified and it is not constructed properly, it can produce unpredictable results.

## Files/Transfers

This window shows the transferred programs, programs to be transferred, the [local name](#) and type of transfer ([miscellaneous](#) or [timed](#)). Program lengths are shown in milliseconds. Programs can be [manually transferred](#) to the [destination directory](#) by double clicking on the desired program. The program list shows files on the [AMR-100](#) and the [XDS system](#).

[Status filter](#)

[Buttons](#)

## Show Status Options

The options filter the entries by different criteria.

**All:** Shows all the programs on the receiver, their status, type of transfer, [local name](#) and their [Amb-OS system name](#).

**Ok:** Shows only the programs that have been transferred without errors.

**Misc:** Shows only the programs that will be transferred when they are received and not on at a [specific time](#) if the "[Enable miscellaneous transfers](#)" box is checked.

**Old:** Shows only the programs that have missed their transfer times and may need to be [manually transferred](#), because they could overwrite an existing file. To [manually transfer](#) a file, double click on the program to be transferred.

**Timed:** Shows only the programs that are transferred at [specific times](#).

**Errors:** Shows only the programs that were either not transferred or had errors when they were transferred.

### NOTE

This window shows all files on the [AMR-100](#) and can be used to verify if a program has been received.

**Manually Transfer:** To transfer a program again, retry a transfer or to do a [manual transfer](#), double click on the desired program to begin the transfer. This works with the [XDS system](#) programs.

## Buttons

**Save as:** Any program can be saved directly from the [AMR-100](#) to a local drive. The program will not be converted regardless of the [output format](#) selected in the "System info." The name can be changed in the "Save dialog" window.

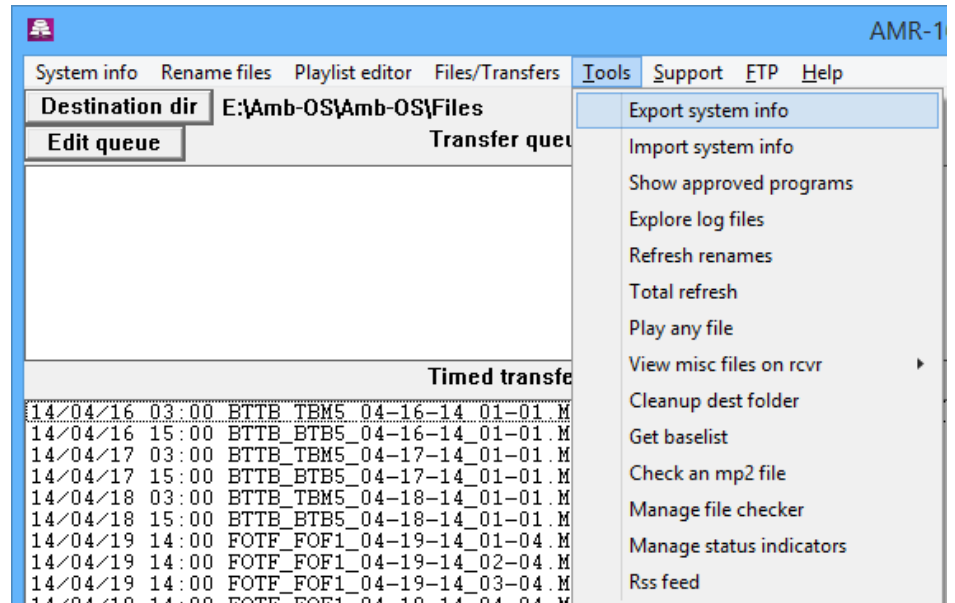

**Close:** Click to close the "[Files/Transfer](#)" window.

## Tools

### Tool Menu Items

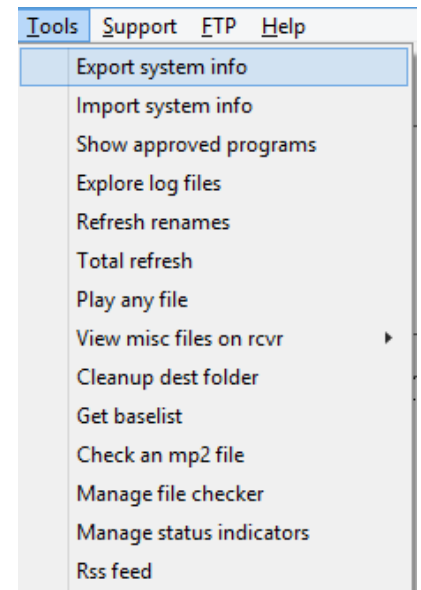

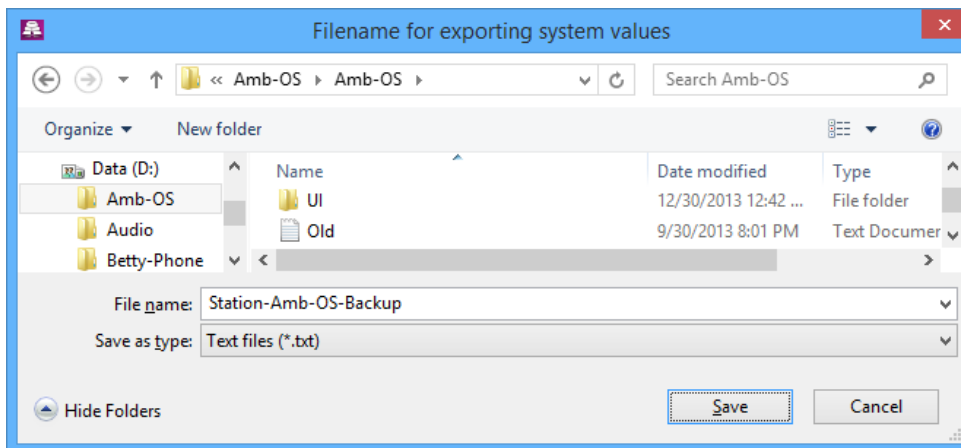

[Export system info](#)  
[Import system info](#)  
[Show approved files](#)  
[Explore log files](#)  
[Refresh renames](#)  
[Total refresh](#)  
[Play any file](#)  
[View misc files on rcvr](#)  
[Cleanup dest folder](#)  
[Get baselist](#)  
[Check an mp2 file](#)  
[Manage file checker](#)  
[Manage status indicators](#)  
[RSS Feed](#)

### Export system info

Saves the current settings of the Amb-OS User Interface to a file allowing the parameters to be imported when reinstalling the Amb-OS User Interface.

Click on Export system info to open the export file window.

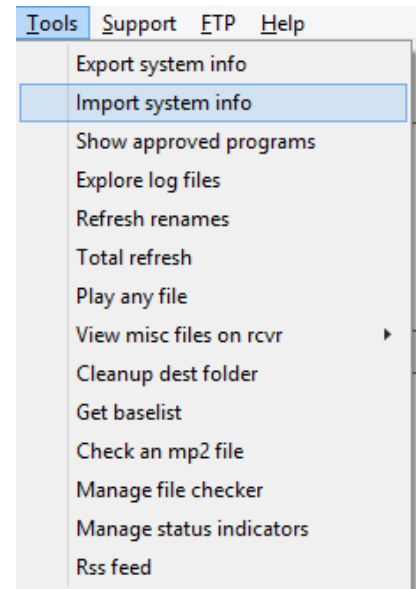

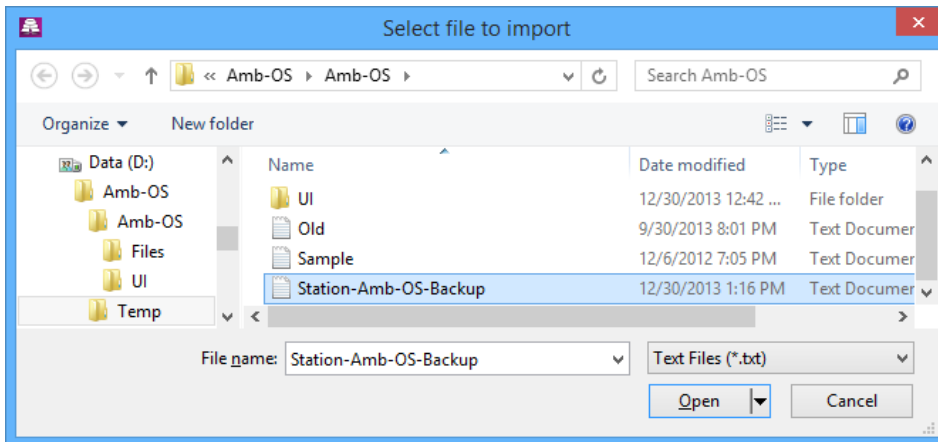

Select the directory and specify the file name of the backup then click on the Save button. This stores the Amb-OS User Interface settings as a text file. The example above uses “Station-Amb-OS-Backup” as the file name; however, any legal Windows® file name will work.

The Amb-OS User Interface automatically uploads the current settings to the Amb-OS FTP site and to the [AMR-100](#) receiver. If the Amb-OS User Interface does not have an Internet connection, be sure to check “[Do not backup to FTP](#)” in the “[System information](#)” settings.

## Import system info

Imports a saved parameters into the current installation of the Amb-OS User Interface. To import a file, click on the Import system info option and select the appropriate backup file to import.

Clicking on Import system info opens the import file window.

Select the file import and click on Open.

### NOTE

The IP address and serial number of the the **AMR-100** receiver are not imported and have to be entered in the **System info** parameters. If the IP address and serial have already been entered, the import leaves them intact.

This works to keep a backup Amb-OS User Interface in sync with the main system. After making changes on the main system, “[export the system information](#)” and import on the backup to keep the two systems identical. Be sure to review the limitation with using [two computers](#) to control one [AMR-100](#).

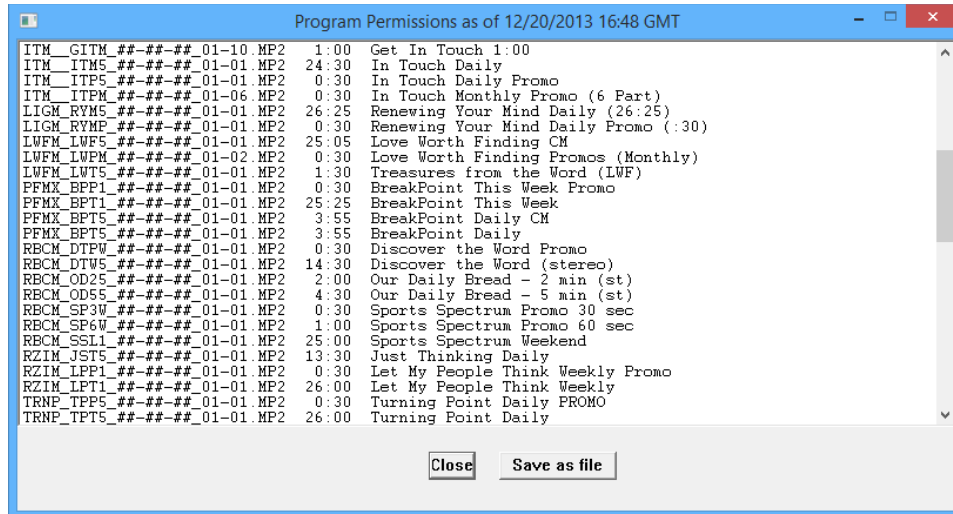

### WARNING

Importing system information into the backup computer will also make the **destination directories** the same. Be sure they do not point the same remote directory to avoid transfer errors.

## Show approved files

This displays the approved programs on the [AMR-100](#) receiver and their full program name.

Click on Show approved files to open the Program Permission window.

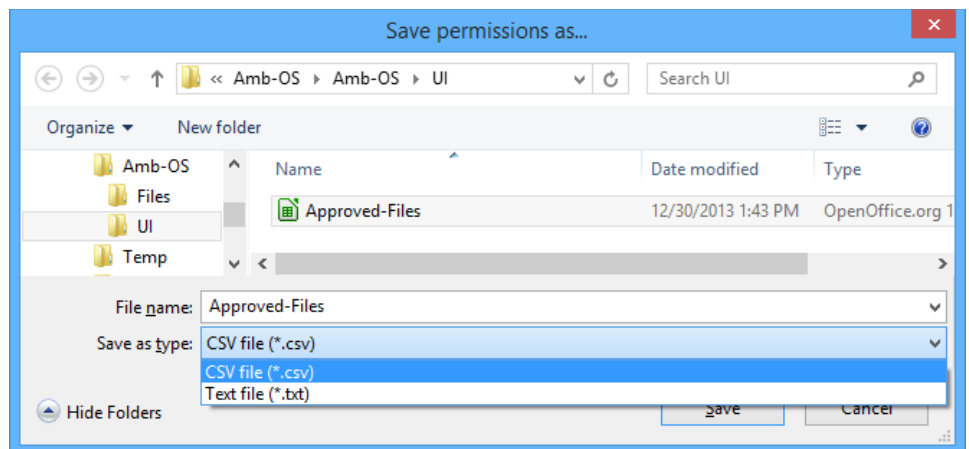

Scroll up and down to see the files

## Save as file

The program list can be saved as a file (csv or text) to be viewed separately or when asked to send it to an Amb-OS support technician. After clicking one the “Save as file” button, select the directory and specify a file name for the exported file.

Select the type of file by clicking on the right of “Save as type:” and select either the “CSV file” (\*.csv) or the “Text file” (\*.txt) for the desired file type.

When completed, click on “Save” to save the file. “Cancel” aborts the operation and does not save the file.

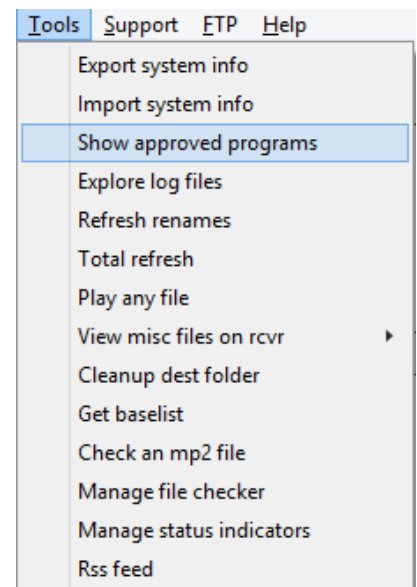

## NOTE

**The Program permission file cannot be imported. The [export system info](#) and [import system info](#) brings back the parameters.**

## Close

Click on “Close” to exit the screen.

## Explore Log Files

The Amb-OS User Interface automatically creates a [log file](#) (system and ftp) for each month. The Amb-OS User Interface displays the current activity log file above the [activity window](#).

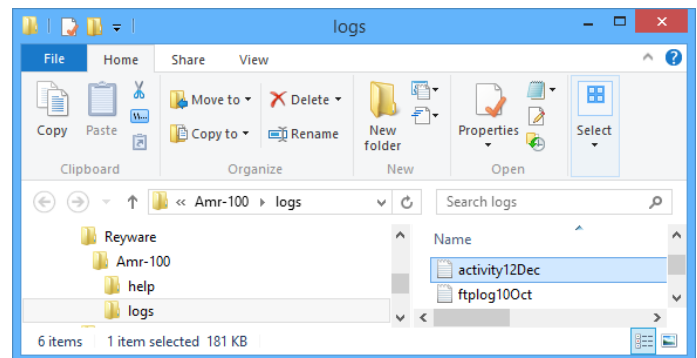

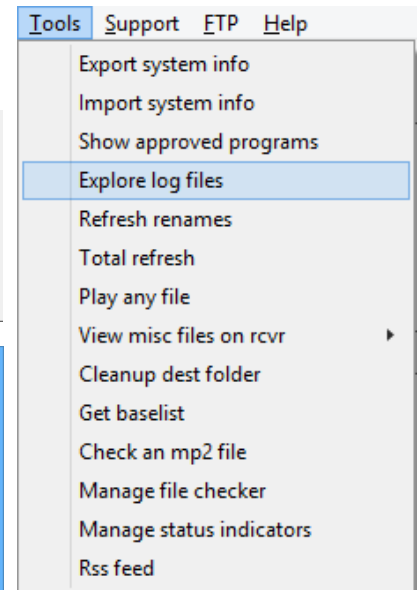

Click on “Explore log files” to open up the file open dialog window.

Double click on the desired log file or highlight it and press [Enter] to open the file.

The log files are text files and the Amb-OS User Interface opens the files with Windows Notepad® allowing the file saved in another location or to be copied and pasted into an email for Amb-OS support technicians.

The [log file messages](#) are listed in the “[Appendix](#).”

When restarting the Amb-OS User Interface, the current month’s log file gets appended rather than having a new log file created. This prevents erasing the previously captured log for the month.

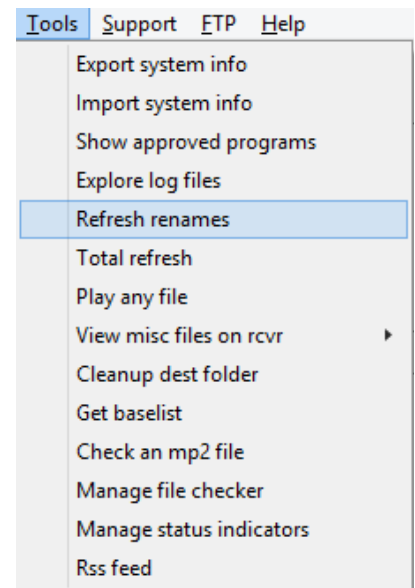

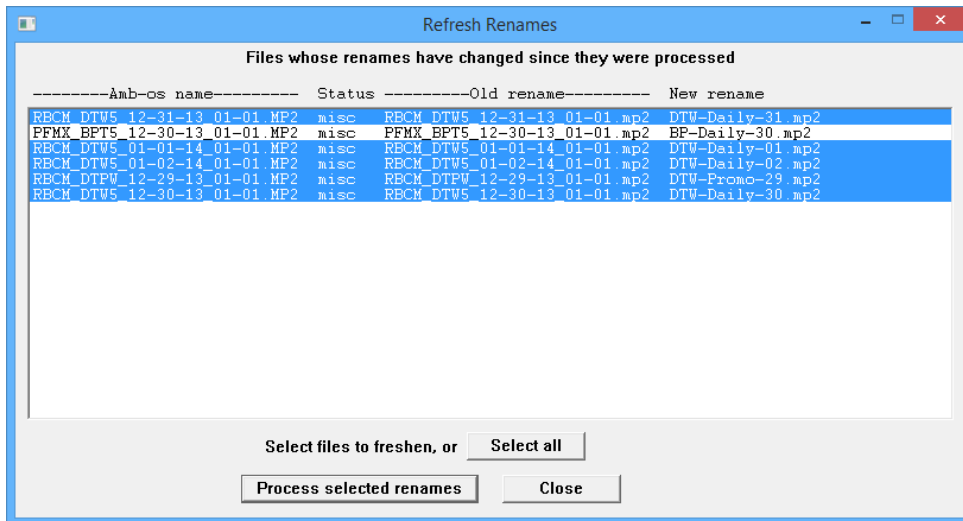

### NOTE

The “rcvg” (receiving a program) items are removed, because the activity log records “rcvd” (received program) making “rcvg” redundant.

## Refresh names

Clicking on the “Refresh names” opens the refresh window showing the [Amb-OS system name](#), the type of transfer, the previous [rename](#) and the updated [rename](#). If a program has been transferred and then the rename pattern is changed, this window shows that change. This becomes useful if a new naming convention is implemented and previously transferred programs need the new names.

## WARNING

If “[Make changes retroactive](#)” in the “[Rename files](#)” window is checked, the file names are changed immediately they cannot be selectively renamed with the “Refresh names.”

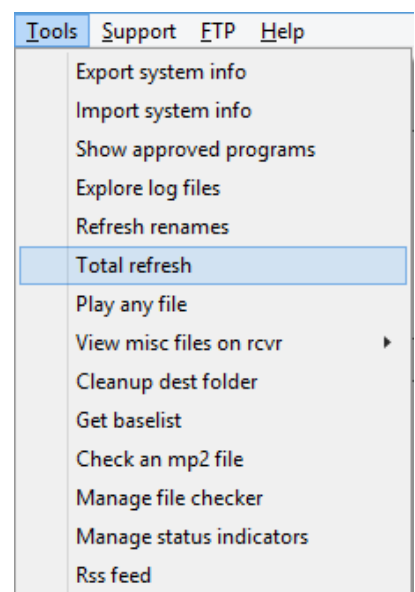

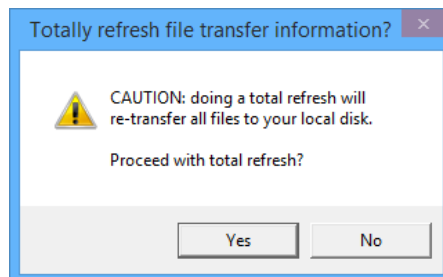

## Total Refresh

The Amb-OS User interface tracks programs and their status (transferred or not) in memory to prevent re-transferring programs.

“Total refresh” clears and rebuilds the transfer log. The Amb-OS User Interface opens a warning window indicating programs may be re-transferred. With a lot of programs, this can take some time to complete.

To cancel the refresh, click on the “No.”

To [transfer just one file](#), use the “[Files/Transfers](#)” window and double click on the desired program to transfer.

## Play any file

Opens a window to play a program on the [AMR-100](#) and from [FTP](#) files or the [XDS receiver](#). The program plays out of the selected audio port of the

### NOTE

The Amb-OS User Interface can only play programs that are on the [AMR-100](#) receiver and not files downloaded from [FTP](#) or from the [XDS receiver](#).

### [AMR-100](#).

The window displays the [Amb-OS system names](#) of the programs. Select program, the audio port and click on “Play.”

**Play** – plays the selected program.

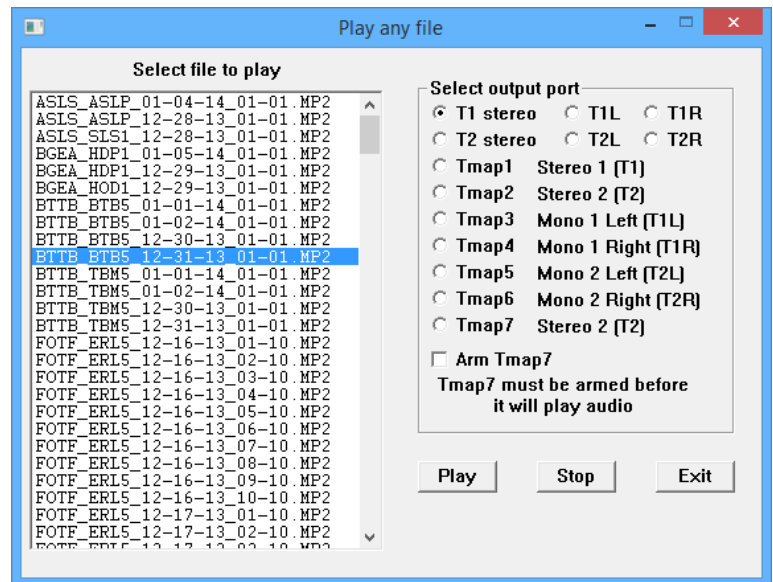

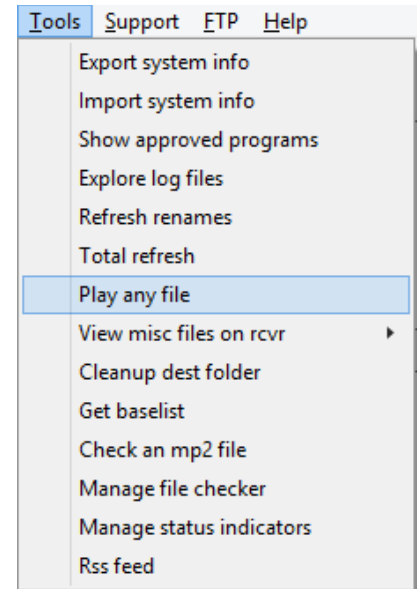

**Stop** – stops the program.

**Exit** – closes the window.

TMAP ports are assigned through the [AMR-100](#) front panel. The AMR-100 Installation manual explains the TMAP ports and how to assign them. Download the manual from <http://www.amb-os.com/support.html>.

### WARNING

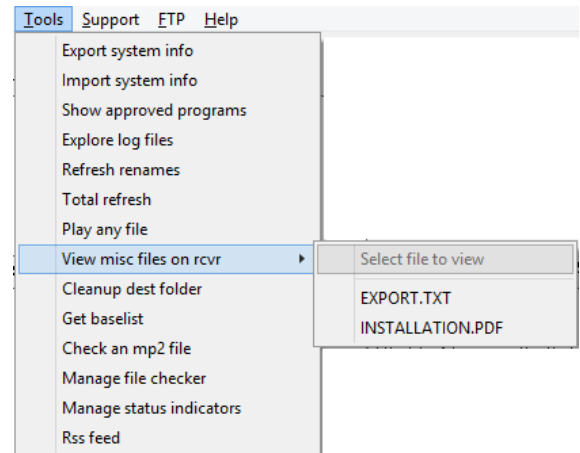

This function can interrupt a program currently playing on the [AMR-100](#). Verify whether the selected port is open before clicking on play.

## View misc files on rcvr

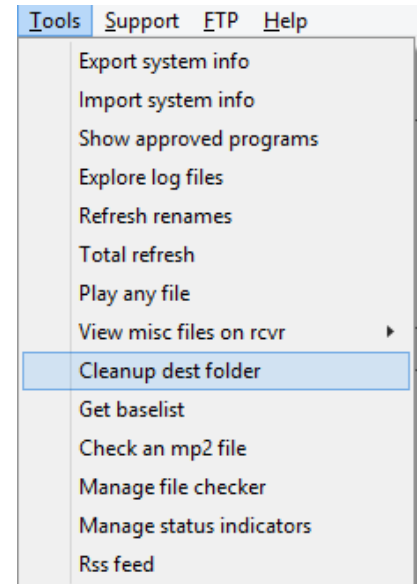

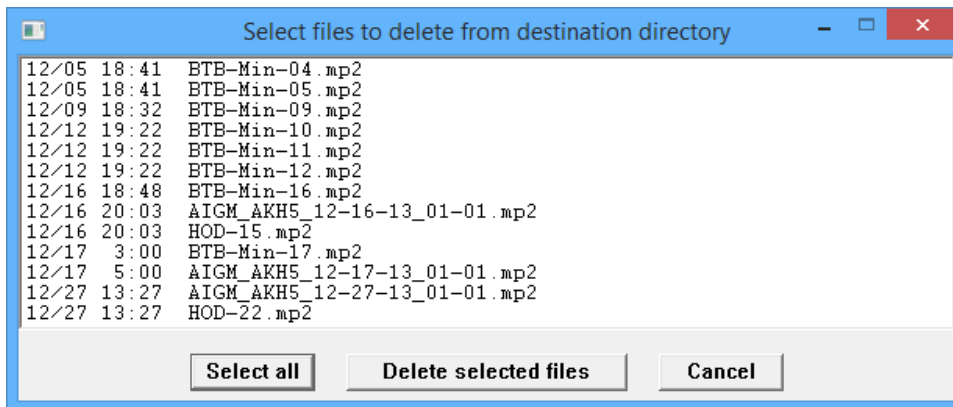

The Amb-OS User Interface mainly transfers audio programs, but the [AMR-100](#) receiver has the installation manual and the Amb-OS User interface export file. This option views other files sent to the [AMR-100](#) receiver.

**NOTE**  
**To view PDF files, Adobe Acrobat Reader® must be installed on the computer.**

## Cleanup dest folder

This checks the programs in the destination folder and compares it the programs on the [AMR-100](#) receiver. Programs not on the [AMR-100](#) receiver, but in the destination folder are displayed and the programs can be deleted. The window lists the program's rename pattern to help identify programs to be deleted or saved.

Use the normal Windows® selection keys.

- Mouse Click – selects individual file and deselects any previously selected file.
- <Shift>Mouse Click – selects the files between the first file and the second selected file.
- <Ctrl>Mouse Click – selects the current file and leaves the previously selected file.

**Select all** selects all the files.

**Delete selected files** deletes the highlighted programs.

**WARNING**  
**Deleted programs cannot be recovered.**

**Cancel** closes the window.

## Get baselist

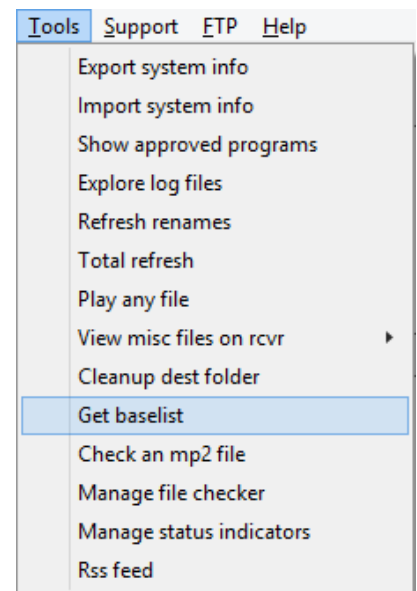

The Amb-OS system sends a file to each [AMR-100](#) containing the complete list of approved programs for the [AMR-100](#). This prevents unnecessary programs from filling up the [AMR-100's](#) hard drive. The Amb-OS User Interface automatically requests a baselist when needed, this manually requests the Amb-OS system to send a baselist for the [AMR-100](#).

Use this to verify requested programs are being sent to the [AMR-100](#).

Depending on programs being transmitted by the Amb-OS system, it could take as long as five minutes for the satellite [AMR-100](#) receiver and up to 25 minutes for the Internet [AMR-100I](#) receiver.

### NOTE

**XDS Limitation: The Amb-OS system does not send program permissions to the XDS receiver; therefore, no baselist exists to be retrieved by Amb-OS system.**

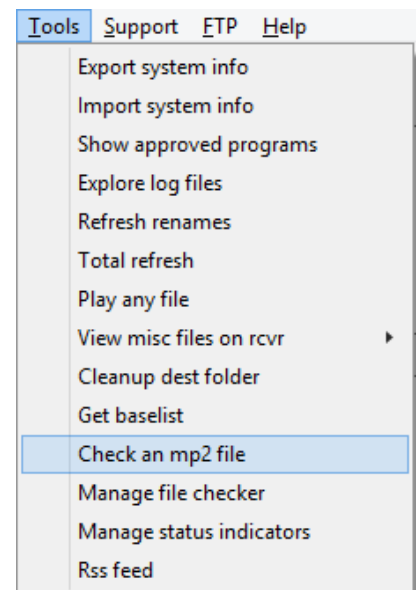

## Check an mp2 file

If a problem prevents a program from transferring, the Amb-OS User Interface can check the MP2 file on the [AMR-100](#). This checks the integrity of a program on the [AMR-100](#) receiver and it also displays the [Cart Chunk](#) information for the program.

The window displays programs by the [Amb-OS system name](#). The Amb-OS User Interface checks each frame of the MP2 file on the [AMR-100](#) for any errors. The information is displayed in the “[Status Message](#)” Window at the bottom of the main Amb-OS User Interface screen.

Highlight the program to be checked and click on Check file. Only one program can be checked at a time.

### NOTE

**Use the scroll bar in the [Status Message](#)” window to view the MP2 file information.**

Sample [Cart Chunk](#) information:

```
verifying AGLX_DLD5_12-13-13_01-01.MP2
sizes 1416852 and 1416860 diff 8
cartchunk id   : '0100'

```

Key Definitions:

Title – Program name

Artist – Host or ministry name

Cutid – [Amb-OS program](#) identifier

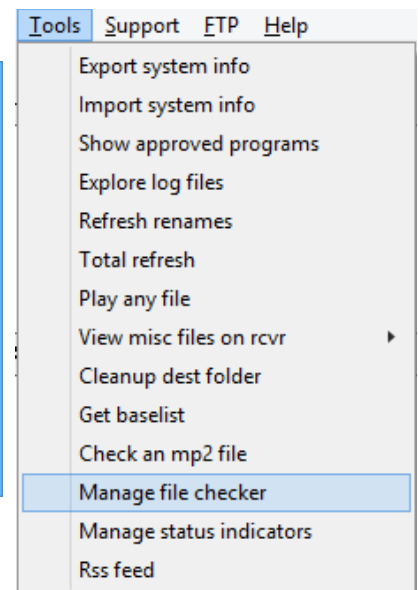

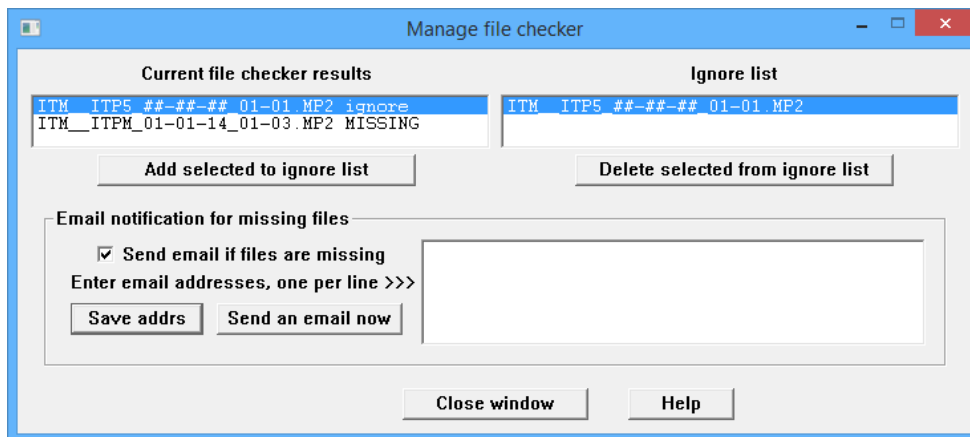

Startdate/Time – When a program is available for transfer or playback (no time = midnight)

Enddate/Time – When a program will be deleted by the Amb-OS system (no time = midnight)

Samplerate – All [Amb-OS programs](#) are 48K

Mode (8 or 16 bit) – 8 bit = mono and 16 bit = stereo

## Manage file checker

The Amb-OS User Interface file checker compares programs on the [AMR-100](#) with the [baselist](#) at 1 am local time for missing programs. The “Manage file checker” ignores programs with an ‘x’ in the [program renames](#).

Other programs can be ignored by adding them to the ignore list. Highlight the program to be ignored and click on the Add selected to ignore list button.

To remove the program from the ignore list, highlight the program in the ignore list and click on the Delete selected from the ignore list button.

**Email Notification for missing files** – To receive email notifications when programs are missing, check the “Send email if files are missing” box. After selecting the box, the buttons “Save addr” and “Send email now” become active. Enter the emails addresses of those who should receive the mails. Put in one address per line and then click on “Save addr” button.

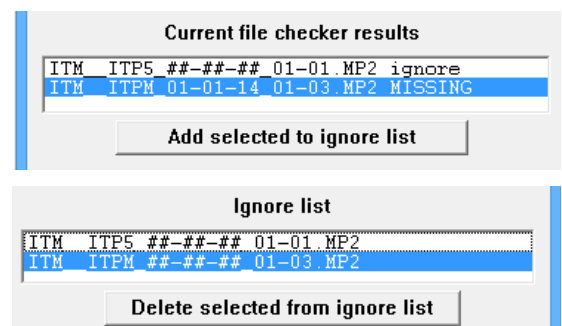

**Save addr:** Saves the addresses entered in the email.

**Send an email now:** Sends an email to the addresses in list as a test.

**Close window:** Closes the window

**Help:** Opens the local help window

**XDS Limitation:** Because program permissions are not managed through the Amb-OS system, the Amb-OS User Interface cannot identify which files should be on the [XDS Receiver](#).

## Manage status indicators

The [status indicators](#) in the main Amb-OS User Interface window can be customized for warnings and notifications.

### EbNo

Alerts are sent to the members in the [email notification](#) list when the EbNo drops to or below the notification settings.

EbNo, a relative indication of signal strength, should not vary significantly under normal circumstances. If the EbNo drops significantly, a problem could exist in the RF chain and the local support personnel can be notified through [email](#) when the signal strength drops below the desired level.

**AMR-100I Limitation:** Because the [AMR-100I](#) does not use RF, this setting will not have any effect on the Amb-OS User Interface notifications.

**XDS Limitation:** The Amb-OS User Interface cannot access the XDS receiver statistics, therefore the notifications do not reflect the RF on the [XDS](#) receiver.

The [AMR-100](#) has a strong RF section and can receive programs even with very low EbNo readings; however, other receivers using the same signal may not be able to function. If the EbNo drops significantly, the [AMR-100](#) may still receive programs; however, it can indicate an issue with the RF chain.

**Red if below:** The EbNo status indicator changes to red if the EbNo reported by the AMR-100 receiver drops below the assigned number. Use this number as the lowest useable EbNo RF number.

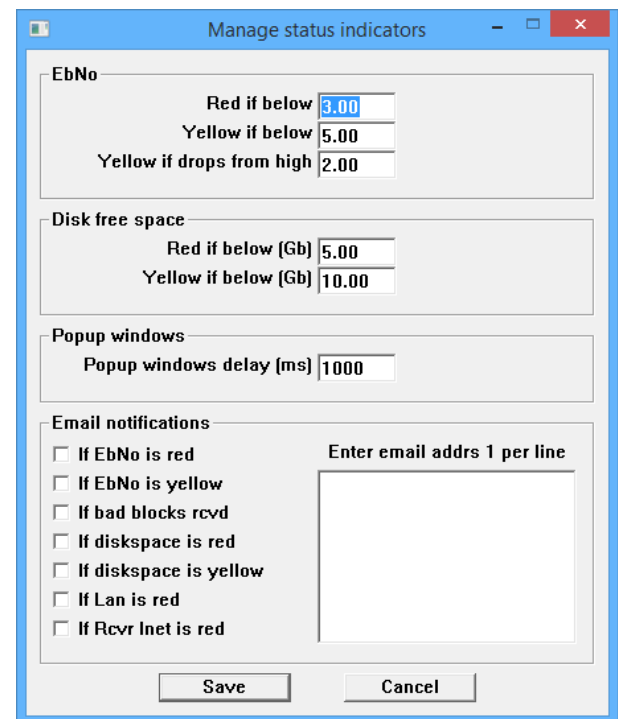

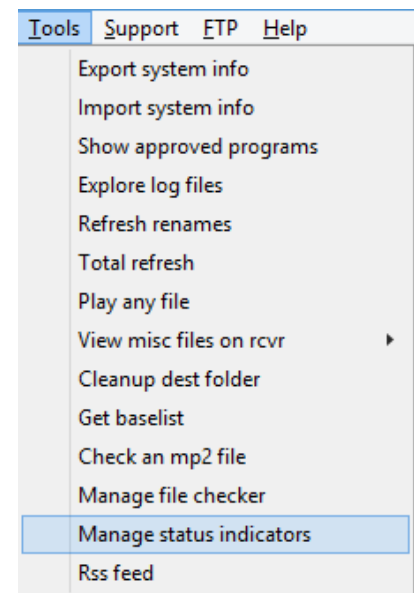

Set the number low enough to prevent false notifications, but high enough to generate an alert for a failure or a situation that needs attention. The Amb-OS User Interface sets the default to 3 dB.

**Yellow if below:** The EbNo status indicator changes to yellow if the EbNo reported by the AMR-100 receiver drops below the assigned number. Use this number as a warning that the RF signal is degrading, but still useable.

Set the number low enough to prevent false notifications, but high enough to generate notifications of degrading signals. The Amb-OS User Interface sets the default to 5.

**Yellow if drops from high:** The EbNo status indicator changes to yellow if the EbNo drops from the normal high reading.

Set the number to account for normal fluctuations of RF levels. If the EbNo normally runs around 10 dB  $\pm$  2 dB (8-12), then set the number at 3 so it sets the indicator when the EbNo drops below 8 or above 12. The Amb-OS User Interface sets the default at 2.

## Disk Free Space

Alerts are sent to the members in the “[email email notification](#)” list when disk space becomes critical based on the settings. With size too small, programs may not be transferred. Normally, the defaults of 5 Gb for critical (red) and 10 Gb for warning (yellow) suffice.

Disk free space	
Red if below [Gb]	5.00
Yellow if below [Gb]	10.00

The amount of space necessary for each situation varies with the number of programs transferred and whether the programs are [converted](#) to a WAV file. As a rule of thumb, Amb-OS MP2 programs take roughly 1 Mb a minute. WAV files take about 10 Mb a minute. A 30 minute MP2 program uses approximately 30 Mb of space and a WAV file uses approximately 300 Mb. With more than 33 programs stored on the [destination directory](#), the critical space may need to be increased over the default of 10 Gb.

Archiving programs for a long period requires a larger [destination drive](#). If space gets low, programs may not transfer. If an error occurs stating a program could be written, check the available disk space on the [destination directory](#). Consider cleaning up the [destination directory function](#) in the [tools menu](#). This deletes programs no longer on the [AMR-100](#). Programs get automatically deleted from the [AMR-100](#).

### NOTE

**If the drive space indicator in the [Status Indicator](#) area consistently becomes red or yellow, more drive space may needed or unnecessary files may need to be deleted to free up space.**

## Popup Windows

When hovering the mouse over the [status indicators](#) section, a window opens while the mouse is over an [indicator](#). This option specifies the amount of time that will elapse before the window opens. The longer the time, the longer the delay to open the window. A “0” setting opens the window open immediately. 1000 milliseconds means leaving the mouse of the indicator for a second before the window opens.

Popup windows	
Popup windows delay (ms)	1000

Regardless of what [indicator](#) is under the mouse, once the time delay has been met, moving the mouse over another indicator without leaving the indicator section, the next pop up window comes up immediately. After moving the mouse to any other area, the delay resets.

## Email Notifications

Station personnel can be notified when any of the [status indicators](#) become yellow or red (fall below the limits set in the [manage indicators](#)). An email can also be sent when the [AMR-100](#) receives bad blocks that could indicate a faulty RF signal.

Select the items that will generate emails by checking them. Add email addresses in the email address box. Enter in an address and press [ENTER] then enter in another address and press [ENTER] until all the addresses have been successfully entered.

If the computer running the Amb-OS User Interface loses the Internet connection, emails can be suspended until the connection has been repaired. Change the [email settings](#) in the [system information](#) settings.

Email notifications	
<input type="checkbox"/> If EbNo is red	Enter email addr's 1 per line person1@domain.com contact2@domain2.com manager@station.com
<input type="checkbox"/> If EbNo is yellow	
<input type="checkbox"/> If bad blocks rcvd	
<input type="checkbox"/> If disk space is red	
<input type="checkbox"/> If disk space is yellow	
<input type="checkbox"/> If Lan is red	
<input type="checkbox"/> If Rcvr lnet is red	

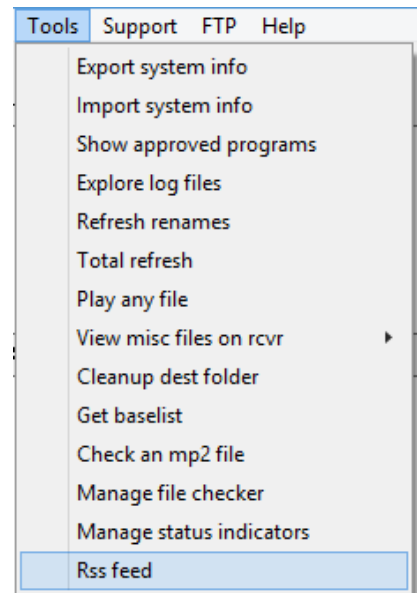

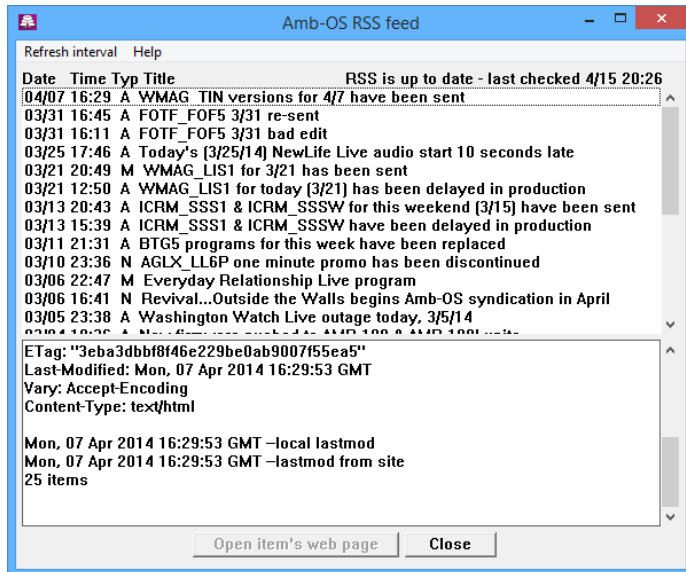

## Save/Cancel

Press the “Save” button to save the settings and “Cancel” to ignore the changes and leave the settings at the previous value.

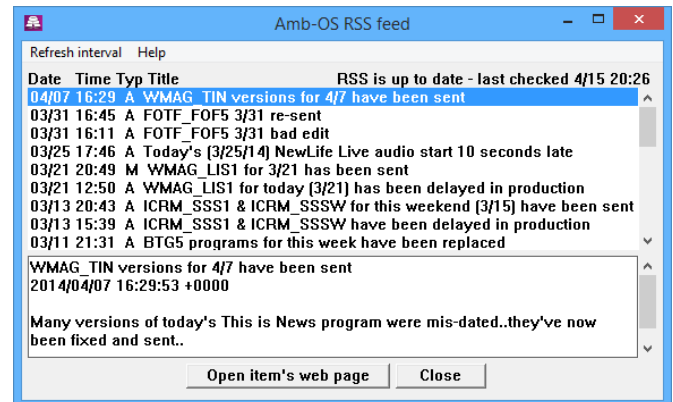

## RSS

The Amb-OS system uses RSS feeds to notify stations of changes or issues with programs. While the information can be received by subscribing the feeds (<http://www.amb-os.com/rss.html>), the Amb-OS User Interface has an option to read the RSS feeds.

Clicking on the “RSS feed” option in the “Tools Menu” opens the feed window.

The message pane at the bottom of the window, shows the status of the RSS system. Clicking on a message in the upper pane displays the RSS message in the lower pane.

**Open item’s web page:** Opens the RSS feed site with that feed’s message. Older messages may not be available, because they get deleted from the web page.

**Close:** Closes the RSS feed window.

## Support

An Internet connection is required for all [email functions](#) and the [update](#) of the Amb-OS User Interface. Except for “[Updating the UI](#),” Amb-OS technicians use these to troubleshoot systems errors and failures.

### [An Internet connection is required](#)

Upload activity to rcvr

Upload debug to rcvr

Upload export to rcvr

Upload ftpexport to rcvr

Email activity to support

Email debug to support

Email export to support

Email files db to support

Email ftpexport to support

Email ftplog to support

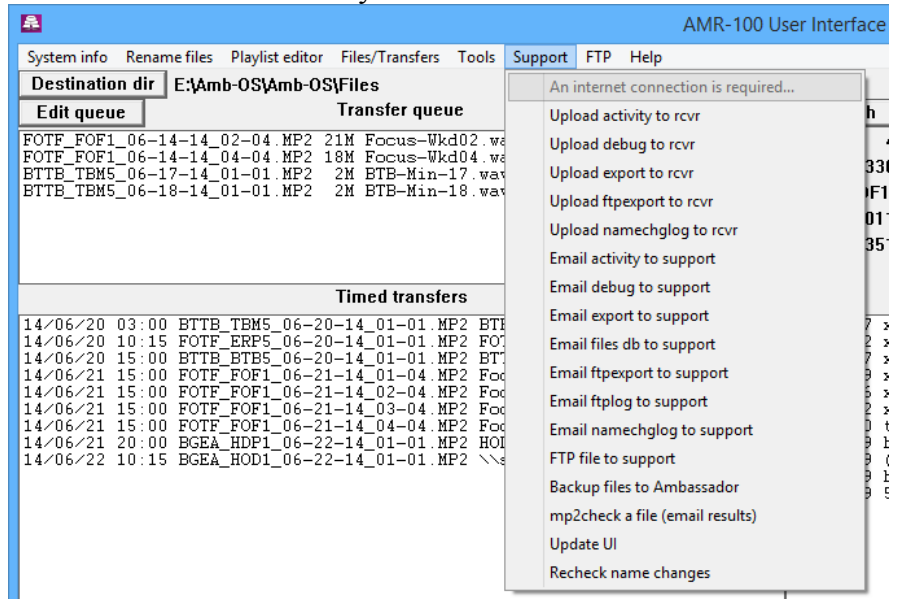

FTP file to support

[Backup files to Ambassador](#)

mp2check a file (email results)

[Update UI](#)

[Recheck name changes](#)

### ***Sending Logs to the [AMR-100](#) Receiver or to Amb-OS support email***

The upload options, email options and FTP option send log files to either the [AMR-100](#) receiver or the Amb-OS support email. The “[activity log](#),” “[debug file](#),” “[export file](#),” “[FTP export log](#)” and a potentially [corrupted audio programs](#) can be uploaded or emailed. Only use these options when instructed by Amb-OS support personnel. Uploading files to the [AMR-100](#) receiver goes hand-in-hand with emailing files to the Amb-OS support personnel.

## WARNING

**If the computer running the Amb-OS User Interface does not have an Internet connection, be sure to check the [Do not send email](#) option in the [System Information](#) settings.**

The mp2check a file (email results) checks a specific program emails the results to Amb-OS support. An Amb-OS support personnel may ask to have the program emailed to check it for errors. If there is a suspected file, contact the Amb-OS support personnel by sending a support request to [support@amb-os.com](mailto:support@amb-os.com) or call the 24-hour support desk at 877AMBOS2U or (877) 262-6728.

To examine an MP2 program on the [AMR-100](#), use the [check an mp2 file](#) in the [tools menu](#).

## WARNING

**Sending the check MP2 file information without being directed by an Amb-OS support technician creates unneeded emails to Amb-OS support.**

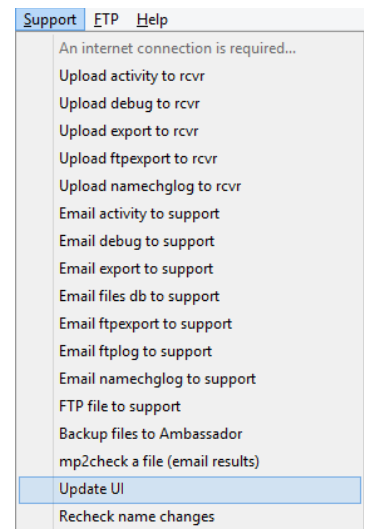

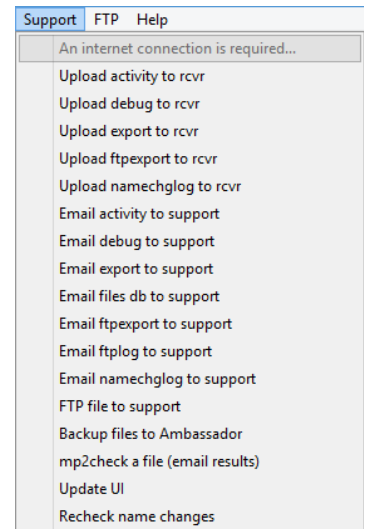

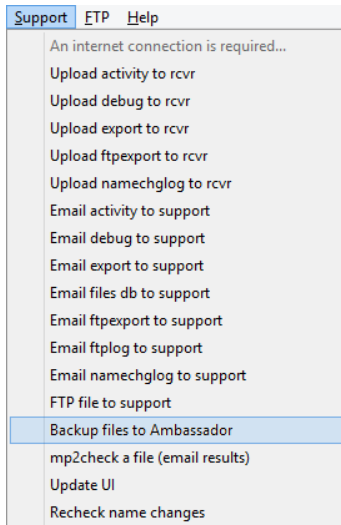

## An Internet connection is required

When email notifications are enabled in the System Settings or the system notifications, the computer needs Internet connection. If no connection exists, the “An Internet connection is required” option becomes enabled.

## Backup Files to Ambassador

FTP file to support allows Amb-OS support personnel to examine a corrupted file to isolate problems. Like the Upload and Email options, this should only be done when directed by Amb-OS support personnel. The options are:

- Upload activity to rcvr
- Upload debug to rcvr
- Upload export to rcvr
- Email activity to support
- Email debug to support
- Email export to support
- FTP file to support

## Update UI

Download and update the Amb-OS User Interface to the latest version or to different version of the software. It preserves all settings from the current version. Selecting a version older than the current version will roll back the Amb-OS User Interface to that version.

Clicking on the “Update UI” option opens a window listing the current version and all available versions of the Amb-OS User Interface.

- Click on the desired version to use.
- Click on “This will update your UI immediately”

A window opens with the message the version is being downloaded. After the version has been downloaded, the queue will be stopped and the version installed. The message will show a countdown and then display the “Update successful” message.

The Amb-OS User Interface has been changed to that version (upgraded if newer and downgraded if older) and the settings have been preserved.

The update windows automatically closes after the successful version change.

**Cancel** aborts the operation.

## Recheck name changes

When ministries change the name of their program, the Amb-OS User Interface can automatically change the [Amb-OS program name](#) to the new name for programs that have not been sent to or transferred from the [AMR-100](#). When starting the Amb-OS User Interface, a window opens listing the programs that have pending name changes and the names can be [changed immediately or delayed](#). However, the [rename pattern](#) remains unchanged and has to be done manually.

Program name changes can be applied to programs that have been transferred with the old [Amb-OS program name](#). If the local [rename pattern](#) was not changed with the new program name, this can be ignored. If the [rename pattern](#) was changed to reflect the new [Amb-OS program name](#), this options allows programs to be refreshed with the new [rename pattern](#).

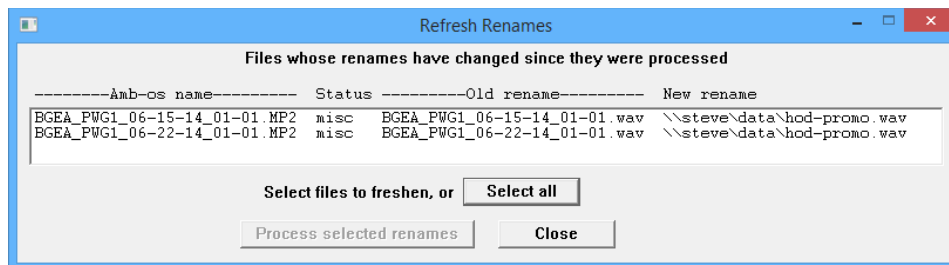

The windows displays:

The new [Amb-OS name](#) – This is the new Amb-OS system name of the program.

The transfer method – This is normally “[misc](#)” ([miscellaneous transfer](#)) so the the program does not get transferred with the new name before the automation system can be changed to reflect the name.

The old rename of the program – This identifies the old [rename pattern](#) to help in finding the old program in the [rename pattern](#) window.

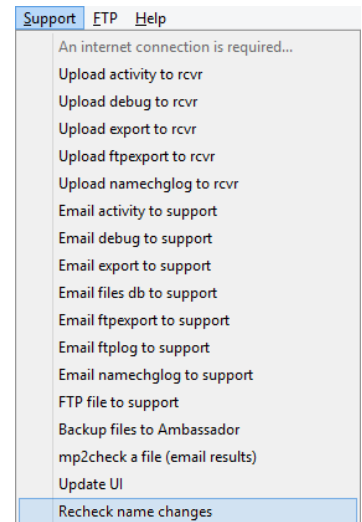

The new rename of the program – This shows the new program name selected.

Click on the programs to change or click on “Select all” to select all of the programs. After selecting the desired programs, click on “Process selected renames.” To not change any of the programs, click on “Close.”

### NOTE

Programs can have any [rename pattern](#) so the old [rename pattern](#) can be left unchanged. This may create confusion when trying to isolate a problem with a program, but the name does not have to be changed.

## FTP

The Am-b-OS User Interface downloads programs with the FTP option and processes them like transferring programs from the [AMR-100](#) receiver. Most of the same [rename options](#) used in transferring programs from the AMR-100 can be used. The MP2 programs can also have their [file extension](#) changed and the [Cart Chunk](#) information can be added, preserved or modified as specified in the [System Info](#).

- WAV programs can have the extension changed and renamed, but they cannot be converted to another format.
- MP3 programs cannot be [converted](#) or have the [file extension](#) changed, but they can be [renamed](#).

### WARNING

**The Amb-OS User Interface FTP transfer cannot convert MP3 files and are transferred without any conversion and retain the MP3 extension.**

[Manage sites](#)  
[Status](#)

### Manage Sites

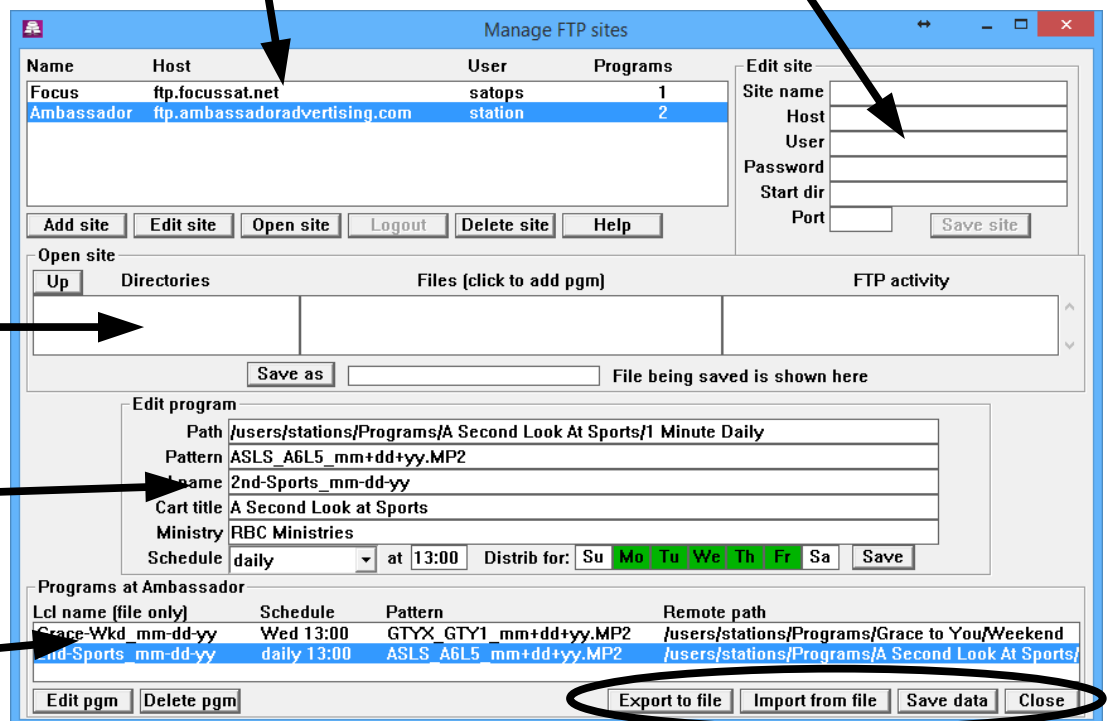

[Site Maintenance Pane](#)

[Edit Site Pane](#)

[Status/Navigation Pane](#)

[Edit Program Pane](#)

[Programs \(Status\) Pane](#)

The screenshot shows the 'Manage FTP sites' window. At the top, there's a menu bar with 'Tools', 'Support', 'FTP', and 'Help'. Below it, a dropdown menu is open showing 'Manage sites' and 'Status'. The main area is divided into several panes. The 'Site Maintenance Pane' at the top left contains a table with columns 'Name', 'Host', 'User', and 'Programs'. It lists two sites: 'Focus' (ftp.focussat.net, satops, 1) and 'Ambassador' (ftp.ambassadoradvertising.com, station, 2). Below this table are buttons: 'Add site', 'Edit site', 'Open site', 'Logout', 'Delete site', and 'Help'. The 'Edit Site Pane' on the right contains fields for 'Site name', 'Host', 'User', 'Password', 'Start dir', and 'Port', with a 'Save site' button. The 'Status/Navigation Pane' on the left has an 'Up' button and a 'Directories' section. The 'Edit Program Pane' in the center has fields for 'Path', 'Pattern', 'Name', 'Cart title', 'Ministry', and 'Schedule', with a 'Save' button. The 'Programs (Status) Pane' at the bottom shows a table with columns 'Lcl name (file only)', 'Schedule', 'Pattern', and 'Remote path'. It lists two programs: 'Grace-Wkd mm-dd-yy' (Wed 13:00, GTYX GTY1 mm+dd+yy.MP2) and '2nd-Sports mm-dd-yy' (daily 13:00, ASLS A6L5 mm+dd+yy.MP2). At the bottom right, there are four buttons: 'Export to file', 'Import from file', 'Save data', and 'Close', which are circled and labeled 'Global Buttons'.

[Global Buttons](#)

## Site Maintenance Pane

The options are: [Add site](#), [Edit site](#), [Open site](#), [Logout](#) (close a site), [Delete site](#) and [Help](#).

### NOTE

**When connected to a site, none of the site settings can be changed. Logout of the site to enable editing or deleting sites.**

### Add site

Enables the “[Edit site pane](#)” to allow entering login information. Without any saved sites only the “Add site” and “[Help](#)” buttons are active. After adding a site, only the “[Logout](#)” button is inactive until opening a site.

Name	Host	User	Programs
<div><a href="#">Add site</a> <a href="#">Edit site</a> <a href="#">Open site</a> <a href="#">Logout</a> <a href="#">Delete site</a> <a href="#">Help</a></div>			
Name	Host	User	Programs
Focus	ftp.focussat.net	anonymous	0
Missions	ftp.sabremissions.org	anonymous	0
<div><a href="#">Add site</a> <a href="#">Edit site</a> <a href="#">Open site</a> <a href="#">Logout</a> <a href="#">Delete site</a> <a href="#">Help</a></div>			

### Edit site

Click on a site and then on “Edit site” to populate the “[Edit site pane](#)” with the settings for that site to allow for changing the settings.

Name	Host	User	Programs
Focus	ftp.focussat.net	anonymous	0
Missions	ftp.sabremissions.org	anonymous	0

[Add site](#) [Edit site](#) [Open site](#) [Logout](#) [Delete site](#) [Help](#)

Edit site

Site name

Focus

Host

ftp.focussat.net

User

anonymous

Password

\*\*\*\*\*

Start dir

Port

21

Save site

### Open site

Logs into a site. After successfully connecting to the site, only the “[Logout](#)” and “[Help](#)” buttons become active. If the login failed, the buttons do not change and an error is displayed in the “[FTP activity window](#)” in the “[Status/Navigation pane](#).”

### Logout

Disconnects from the site and enables the other buttons and allows [editing of site information](#). Closing the “[FTP Manage site window](#)” automatically logs out of a site.

Name	Host	User	Programs
Focus	ftp.focussat.net	anonymous	0
Missions	ftp.sabremissions.org	anonymous	0

[Add site](#) [Edit site](#) [Open site](#) [Logout](#) [Delete site](#) [Help](#)

Name	Host	User	Programs
Focus	ftp.focussat.net	anonymous	0
Missions	ftp.sabremissions.org	anonymous	1

[Add site](#) [Edit site](#) [Open site](#) [Logout](#) [Delete site](#) [Help](#)

## Delete site

Highlight the site to be deleted and click on “Delete site” to remove the site. This also removes the programs from that site that are listed in the “[program list](#)” preventing the Amb-OS User Interface from trying to download a program without a login to the site.

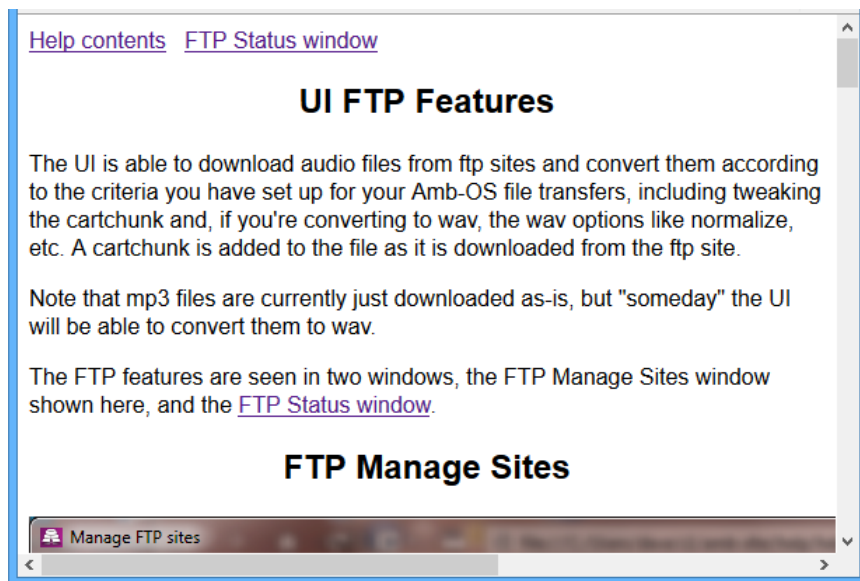

A window opens to confirm the site deletion. “Yes” deletes the site and file settings for that site and “No” leaves the site and the files.

Name	Host	User	Programs
Focus	ftp.focussat.net	anonymous	0
Missions	ftp.sabremissions.org	anonymous	1
<div><button>Add site</button><button>Edit site</button><button>Open site</button><button>Logout</button><button>Delete site</button><button>Help</button></div>			

## Help

Opens the help file for the “[FTP site manager](#).”

## Edit Site Pane

This pane and the “[Save site](#)” button is inactive until after the “[Add site](#)” or “[Edit site](#)” buttons are clicked. While data may be entered without clicking on the “[Add site](#)” or “[Edit site](#),” the data cannot be saved.

### WARNING

**The data in the “Edit site” window cannot be saved unless “Add site” or “Edit site” activated the pane.**

After clicking on “[Add site](#),” the “[Save site](#)” window becomes active and the “[port](#)” automatically gets populated with the default port of 21.

**Site name:** Any name can be entered to easily identify the site. A site name is required to save the site’s login information.

**Host:** Enter the URL of the site. While most FTP sites begin with “ftp,” some may begin with “www” so verify the correct URL name.

### WARNING

**Do not use the protocol parameter (ftp://) or the site will not work.**

**User:** Enter the user name for the site. Some sites allow an anonymous login. If so, enter “anonymous” as the name. Many sites require a specific user name and some sites have case sensitive user names. Contact the ministry to obtain a user name.

**Password:** Enter the password of the site, which is usually case sensitive. If the user name is “anonymous,” sometimes this can be blank. If that fails, enter an email address or just some text with “@” in it (for example, get@in). If a site requires a specific password, contact the ministry to obtain a password.

**Start dir:** Most sites automatically start in a directory that has the downloads visible and this can be left blank. However, some sites hide directories or have several layers of directories and the start directory can be used to go directly to the desired location. If so, put in the path of the directory with the programs; for example, “/radiostation/complete.”

After selecting a directory with the desired programs, the Amb-OS User Interface will not need to be directed to that program directory and there is no need to wade through a directory tree to find programs.

**Port:** The default FTP transfer port is 21. Unless a ministry specifies a different port, leave this setting unchanged.

**Save site:** After entering the parameters, click on “Save site” to store the settings. The new site will be listed

The screenshot shows the 'Edit site' window with the following fields: Site name, Host, User, Password, Start dir, and Port. The Port field is set to 21. A 'Save site' button is at the bottom right.

The screenshot shows the 'Edit site' window with the following fields: User (station), Password (\*\*\*), Start dir, and Port (21). A 'Save site' button is at the bottom right.

The screenshot shows the 'Edit site' window with the following fields: Site name, Host, User, Password, Start dir, and Port (21). A 'Save site' button is at the bottom right.

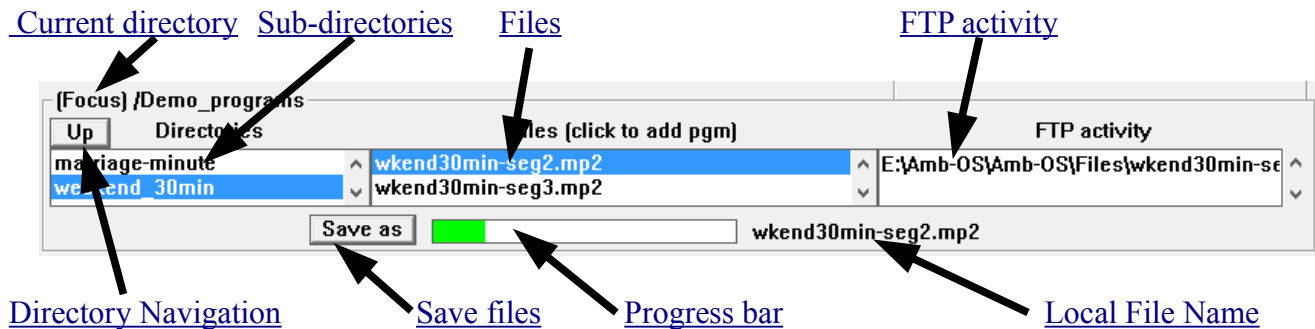

The screenshot shows the 'Edit site' window with the following fields: Site name (Ambassador), Host (ambassadoradvertising.com), User (station), Password (\*\*\*), Start dir, and Port (21). A 'Save site' button is at the bottom right.

### WARNING

**Clicking on “[Add site](#)” before “[Save site](#)” clears the settings without saving them and they will have to be entered again.**

## Status/Navigation Pane

Navigates through FTP sites, allows selecting of programs and displays the “[FTP Activity.](#)”

**Current Directory:** Shows name of the FTP site and the currently selected directory. “/” is the root directory of the users FTP access to a site.

Before opening a site, the current directory has “[Open site](#)” displayed.

**Up:** Moves up the directory tree after going into [sub-directories](#).

**Save as:** Allows a highlighted program to be saved immediately. 

Any file in the directory can be saved. The format of the original file does not matter. A normal save dialog box opens to select the directory and the name of the saved file.

**NOTE**  
Programs saved with the “Save as” button will not be converted.

Programs saved with “Save as” will not have any of the parameters in the [FTP pattern](#) applied and it will not do any format conversions. Any name can be used in the “File name” option in the “Save as” dialog box. Select one file at time, but a new program can be saved before the previous program completes downloading.

With no program selected, Save as is inactive. 

**Progress bar:** Displays the progress of the [saved program](#).

**Local File Name:** The name of the local program.

**Sub-Directories:** Click once on the desired directory to open the directory. If no files appear in the “[Files window](#),” then only sub-directories exist. If the directories do not change when a sub-directory is selected, then no sub-directories exist.

Use the up and down arrow keys, on right of the window, to navigate through the directory list.

**Files:** This shows the content of the selected [directory](#). Any of the programs or files can be selected for saving and for automated downloads in the “[Edit program pane](#).”

Use the up and down arrow keys, on right of the window, to navigate through the program list. Click once on a program or file to add it to the “[Edit program pane](#).”

**FTP activity:** This shows the current status of the site and if any errors were encountered. After [logging out](#) of or [closing](#) a site, the “[FTP activity log](#)” keeps the log for that site until a different site is [opened](#). Then the activity log is cleared and the log for the current site is displayed. However, the “[Message window](#)” in the main Amb-OS User Interface also logs all activity and the messages from the previous site remain in that window. Because the “[main activity log](#)” window records all Amb-OS User Interface [activity](#), the messages from the FTP activity get intermixed with other messages and may be harder to find.

Use the up and down arrow keys, on right of the window, to navigate through the file list.

### NOTE

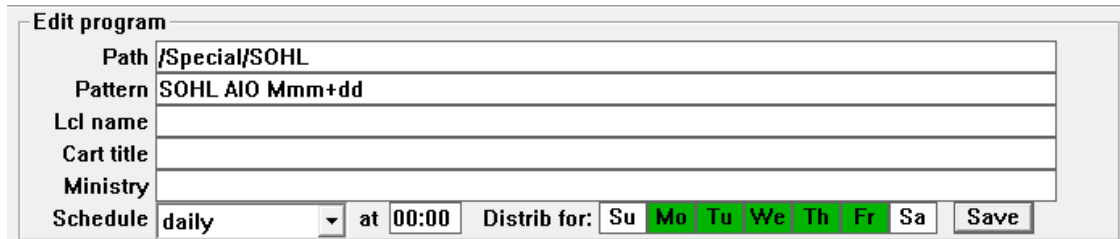

The FTP activity window is cleared when a different site is opened.

### NOTE

New programs can be added only when logged into a site.

## Edit Program Pane

After selecting a program in the “[Status/Navigation pane](#),” the program comes in the “Edit program pane” for customizing the name. To have multiple programs from the site, select one program at time, edit the settings and save each program before selecting the next one.

Edit program	
Path	/Special/SOHL
Pattern	SOHL AIO Mmm+dd
Lcl name	
Cart title	
Ministry	
Schedule	daily at 00:00 Distrib for: Su Mo Tu We Th Fr Sa Save

## Path

The selected program in the [Status/Navigation pane](#) automatically gets the path field filled. The Amb-OS User Interface saves this in order to be able to get to the same directory whenever it is scheduled to transfer. This can be manually edited for changes; however, unless the ministry changes directories regularly that do not reflect a standard month/day/year, this should not have to be changed. Variables can be used to automatically change directories if they are based on dates.

## WARNING

**Deleting the path information will prevent a program from transferring.**

Directory Naming Convention	Substitute Variable
For directories with just a year (...program/ <b>2014</b> )	Substitute yyyy for <b>2014</b>
For directories with just a two digit month (...program/ <b>02</b> )	Substitute mm for <b>02</b>
For directories with a three letter month (...program/ <b>Feb</b> )	Substitute Mmm for <b>Feb</b>
For directories with the full month name (...program/ <b>February</b> )	Substitute Mmmm for <b>February</b>
For directories with the quarter (...program/ <b>1st</b> )	Substitute Qqq for <b>1st</b>
For directories with the Spanish three letter month (...program/ <b>Feb</b> )	Substitute Eee for <b>Feb</b>
For directories with the Spanish full month name (...program/ <b>Febrero</b> )	Substitute Eeee for <b>Febrero</b>
Example	
ministry/program/2014/Feb	Substitute .../program/yyyy/Mmm
ministry/program/02February	Substitute .../mmMmmm

If the path seems unclear, contact the ministry for an explanation on how they name directories.

## Pattern

This allows using substitute variables in the source name enabling the Amb-OS User Interface to find programs that change names or to ignore unpredictable elements. This can automatically find a program with a date in the name without daily intervention.

If left blank or the entered pattern does not match anything, a window pops up with the option to contact Dave ([support@amb-os.com](mailto:support@amb-os.com)) to add a pattern.

If the name seems unclear, contact the ministry for an explanation on naming convention.

Pattern Options	
FTP Program Name with...	Substitute Pattern
A four digit year, two digit month and day Program Name: prgm-20140210	Substitute: prgm-yyyymmdd
A two digit month, day and year Program Name: prgm-021014	Substitute: pgrm-mmddyy
A four digit year, two digit month and day with a separator between segments Program Name: prgm-2014-02-10, prgm-2014_02_10 or pgrm-2014 02 10	Substitute: pgrmyyyy+mm+dd
A four digit year, two digit month and day and a separator between segments Program Name: prgm-2014-0210, prgm-2014_2010 or prgm-2014 0210	Substitute: pgrm-yyyy+mmdd
A four digit year and two digit month and a separator between the segments Program Name: prgm-2014-02, prgm-2014_20 or prgm-2014 02	Substitute: pgrm-yyyy+mm
A two digit month, day and year Program Name: prgm-021014	Substitute: pgrm-mmddyy
A two a digit month and day, four digit year and a separator between the segments Program Name: prgm-02-10-14, prgm-02_10_14 or prgm-02 10 14	Substitute: pgrm-mm+dd+yyyy
A two digit month and day Program Name: prgm-0210	Substitute: pgrm-mmdd
A two digit month and day and a separator between the segments Program Name: prgm-02-10, prgm-02_10 or prgm-02 10	Substitute: pgrm-mm+dd
A three letter month, a two digit day and a separator between the segments Program Name: prgm-Feb-10, prgm-Feb_10 or prgm-Feb 10	Substitute: pgrm-Mmm+dd
A three letter month, two digit day, a four digit year and a separator between the segments Program Name: prgm-Feb-10-2014, prgm-Feb_10_2014 or prgm-Feb 10 2014	Substitute: pgrm-Mmm+dd+yyyy
The full month name, two digit day, a four digit year and a separator between the segments Program Name: prgm-February-10-2014, prgm-February_10_2014 or prgm-February 10 2014	Substitute: pgrm-Mmmm+dd+yyyy
The full month name, two digit day, a “,” after the day, a four digit year and a separator between the segments Program Name: prgm-February-10,-2014, prgm-February_10,_2014 or prgm-February 10, 2014 (more common)	Substitute: pgrm-Mmmm+dd,+yyyy
A three letter month, two digit day and two digit year Program Name: prgm-Feb102014	Substitute: pgrm-Mmmddyy
A four digit year, three letter month and two digit day Program Name: prgm-2014Feb10	Substitute: pgrm-yyyyMmmdd
A variable length month and day and checks for a separator between the month and day. Program Name: prgm-2-10-14 for February 10, 2014 or prgm-11-1-13 for November 1, 2014	Substitute: pgrm-M+D+yy
An unpredictable variable in a program name. If the program name has the program number, but they are not in order, then the program number would be ignored. Program Name: prgm-IFL137_02-10-13	Substiute “*” for the 137 prgm-IFL*_mm+dd+yy

**WARNING**  
**Only one “\*” or substitution can used in any one pattern.**

## Examples

Program Name	Substitute Pattern
RTWL138-02-10-14.mp3	RTWL*-mm+dd+yy.mp3
PI140124-GimmeShelter.mp2	PIyyddmm-*.mp2
WW_Daily_01_31.mp2	WW_Daily_mm+dd.mp2

Illegal use of "*" or substitution	
Program Name	Substitute Pattern
PRGM-New-ABC_02-10-14.MP2	PRGM-*-*_mm+dd+yy.MP2

### Lcl name (required)

Input the values wanted for the name of the file when it is transferred. The same options used in the "[File Renames](#)" can be used in the FTP transfer.

The field cannot be left blank. Without a local name, the AMB-OS User Interface opens an error window.

**WARNING**  
The local pattern must have an entry to give the program a name when transferred.

**NOTE**  
Multiple part programs on FTP sites cannot be combined into one program with FTP transfer.

### Cart title (optional)

While the Amb-OS User Interface maintains the [Cart Chunk information](#) or adds it as specified in the "[System Info](#)," a title can be added to the title field in the Cart Chunk data. Any name can be used, keep in mind the need of the automation system.

If left blank, no title is put in the title field of the Cart Chunk data.

### Ministry (optional)

Enter the name of the ministry. This field helps in organizing and identifying programs. If left blank, programs may not be easily identified when troubleshooting a missed transfer.

## Schedule

Schedule	daily	at	00:00	Distrib for:	Su	Mo	Tu	We	Th	Fr	Sa	Save
----------	-------	----	-------	--------------	----	----	----	----	----	----	----	------

**Frequency:** Determines how often the Amb-OS User Interface should transfer a program.

The drop-down menu options are:

**Same day** – Log in on the day of the air date.

**Daily+2** – Log in every day and search for programs two days before air date (ignores weekends – searches for Monday’s program on Thursday and Tuesday’s program on Friday).

**Daily+1** – Log in every day and search for programs one day before air date (ignores weekends – searches for Monday’s program on Friday).

**Daily** – Log in every day (ignores weekends).

**Sundays thru Saturdays** – Log in once a week on the day selected to download the program.

Selecting a daily check for a weekend program will open a warning window stating a daily check should not be used for a weekend program.

Schedule	daily
	same day
	daily+2
	daily+1
	daily
	Sundays
	Mondays
	Tuesdays
	Wednesdays
	Thursdays
	Fridays
	Saturdays

at	00:00
----	-------

**Time:** Specifies the time (in 24 hour format) when the Amb-OS User Interface will transfer a program. While different times can be used for every program on a site, using the same time for all programs on the site eliminates unnecessary traffic on the host site.

### WARNING

**If the time to transfer is scheduled before a program is available, the program will be missed and have to be transferred manually.**

The Amb-OS User Interface follows the “[After 12 PM \(noon\) Rule](#).” Scheduled times before 12 PM (noon) transfers the same day’s program and times after 12 PM (noon) transfers the next day’s program.

A missed program will have to be [transferred manually](#).

**Distribution:** Select the days the program airs and will be available on the FTP site. If a weekend program comes on a Wednesday, make sure only “W” is green. If more days are selected for a one day a week program, the FTP will log in more than necessary.

Distrib for:	Su	Mo	Tu	We	Th	Fr	Sa
--------------	----	----	----	----	----	----	----

Distrib for:	Su	Mo	Tu	We	Th	Fr	Sa
--------------	----	----	----	----	----	----	----

If a program does not get posted until after the selected day, the program will have to be [transferred manually](#). For example, selecting Tuesday to transfer a program posted on Wednesday.

If a program has a daily date, the “Mo,” “Tu,” “We,” “Th” and “Fr” boxes are automatically highlighted. Clicking on one of the days will clear the individual box. Double clicking on any of the weekdays will clear the boxes if they were highlighted and select them if they were clear.

**Save:** After setting all file settings and transfer times, click on “Save.”

Save
------

### WARNING

**If the Manage sites window is closed or another program is selected before clicking on “Save,” all edits and changes will be lost.**

Programs (Status) Pane

This shows the name of the FTP site and the programs associated with that site. The title of the pane shows the name of the FTP site as listed in the “[Site Maintenance pane](#).” Clicking on a site in the “[Site Maintenance pane](#)” shows the programs associated with that site. Program information from the site can also be edited without logging into the associated FTP site.

Status

Double-clicking on a program populates the “[Edit program pane](#)” and enables modifying the settings.

Programs at Ambassador			
Lcl name (file only)	Schedule	Pattern	Remote path
Grace-Wkd_mm-dd-yy	Wed 13:00	GTyX GTy1_mm+dd+yy.MP2	/users/stations/Programs/Grace to You/Weekend
2nd-Sports_mm-dd-yy	daily 13:00	ASLS_A6L5_mm+dd+yy.MP2	/users/stations/Programs/A Second Look At Sports/
<div>Edit pgmDelete pgm</div>		<div>Export to fileImport from fileSave dataClose</div>	

Program line

**[Lcl name \(file only\)](#):** Displays the name of the program with the name it has when transferred.

**[Schedule](#):** Displays the frequency of transfer and the time (24 hour) of the transfer.

**[Pattern](#):** Displays the pattern used to check for programs on the FTP site.

**[Remote Path](#):** Displays the [directory tree](#) for the program to be downloaded.

Edit Pgm

Allows the program information to be edited in the “[Edit programs pane](#).” Double clicking on a program in the window will also puts the program in the “[Edit programs pane](#).”

The editing mode can be done while logged into a site, but a site cannot be opened when editing program

WARNING

Editing the Remote path will cause a program to not transfer if the modified path does not exactly match the path on the FTP site.

Delete pgm

Deletes the highlighted program.

Grace-Wkd_mm-dd-yy
<div>Edit pgmDelete pgm</div>

WARNING

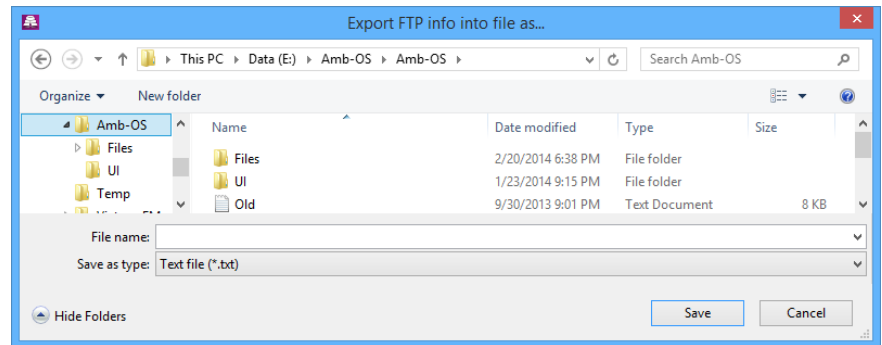

Deleted programs are deleted immediately and cannot be undone and have to be entered again.

## Global Buttons

### Export to File

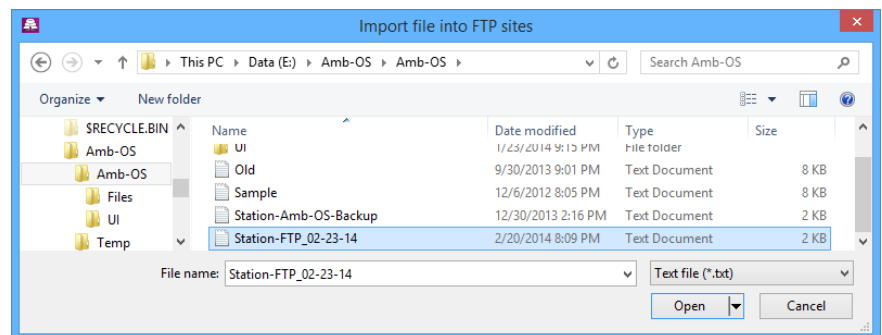

Exports the settings for the FTP transfers. Clicking on “Export to file” opens a save dialog box to select the file name and the directory. Input the desired file name and click on “Save.” This allows retrieving the program list to restore previous settings or when installing new Amb-OS User Interface to the computer.

### Import from File

Imports the saved settings. Click on “Import from file” to import a save settings file. The open file dialog box. Select the directory and the file that was saved and click on “Open.”

If sites have already been setup, a warning box opens with the reminder that the current settings will be overwritten.

### Save Data

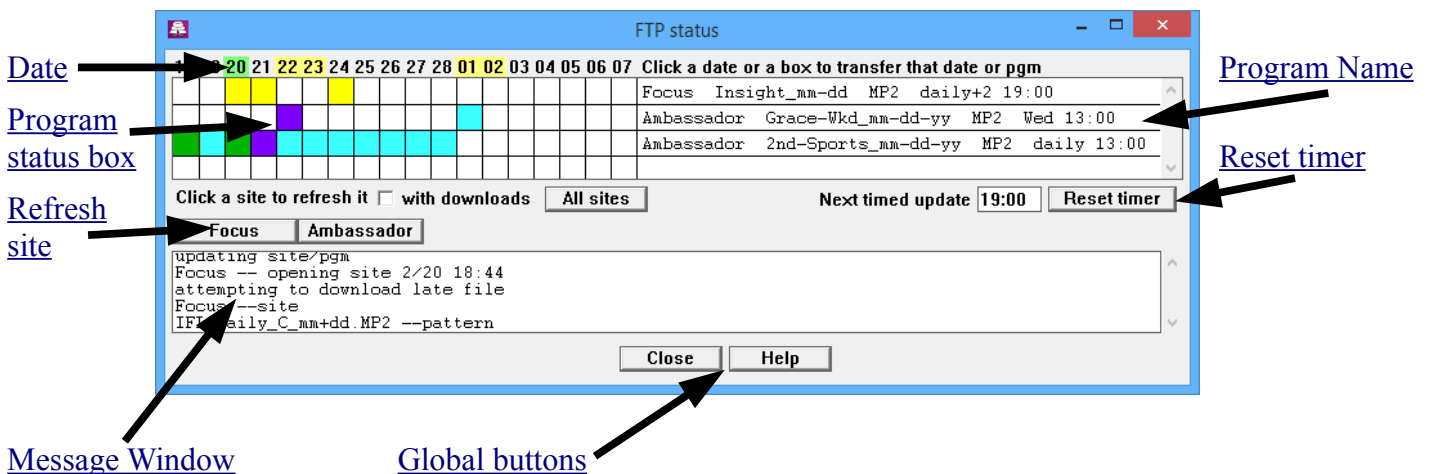

Changes made to a program enables the “Save data” button and allows adding or editing another program. Clicking on the button saves the changes. However, closing “Manage sites,” clicking on “Close” or the Windows® red “X” (upper right) also saves the data.

### Close

Closes the [“Manage Sites window.”](#)

## FTP Status

## Date

Shows an eighteen day schedule starting two days before the current date to verify programs have been transferred. Up to twenty programs can be listed.

**Green:** The current date

**Yellow:** Weekend date

Clicking on a date will download the available programs for that date, but programs that have already been downloaded will be ignored.

## Program status box

Shows the status of the program with different colors.

Color	Status Indication
<b>White</b>	No program available for that date
<b>Light Blue</b>	Program is available on the FTP site
<b>Green</b>	Program has been successfully transferred
<b>Purple</b>	Program has been queued for transfer
<b>Red</b>	Transfer of the program encountered an error
<b>Yellow</b>	Program has missed the scheduled transfer time

To transfer a program, click on a box that has a program for the day and that day's program will be downloaded even if the program has already been successfully downloaded. Here are the actions the Amb-OS User Interface will take when clicking on the boxes (based on the color of the box).

-  Light blue: Program available, but has not yet downloaded – will download
-  Yellow: Program missed – will be downloaded
-  Green: Program available and has already downloaded – will download again
-  Purple: Program queued for transfer – no affect
-  White: No program available – will not download
-  Red: Program transfer error – another attempt will be made to download

## Program Name

Displays the site, name, type of file on the site, and schedule of the transfer.

**Site Name:** The name of the FTP site as specified in the “[Site Maintenance Pane.](#)”

**Name:** The local name of the file (extension is assigned by the “[System Information](#)” setting).

**Type:** The type of file on the FTP site and not the type of file saved in the transfer.

**Schedule:** The frequency of the transfer (daily, once a week) and the [scheduled time](#) of the transfer.

## Refresh site

Used to update site content, to verify if programs exist and if they need downloading. Individual sites can be refreshed by clicking on the name of the site. Click on “All sites” to check every site.

Check the box next to “with downloads” and refresh one site or all sites. Programs meeting or have missed their scheduled transfer time will be queued for transfer when the site is refreshed.

## Reset Timer

Recalculates the next transfer event.

The timer checks for the next program based on the air date(s) selected in “[Edit Programs pane.](#)” A Saturday program schedule for a Wednesday transfer, is checked on Wednesday.

## Message Window

Displays the activity of FTP actions – [opening](#) or [closing](#) a site, transferring a program, etc. Closing the “[FTP status](#)” window erases the log. The Amb-OS User Interface [activity window](#) also records the messages, but they are mixed in with other messages and are not as organized and may be harder to find individual messages.

```

Ambassador -- closing site
```

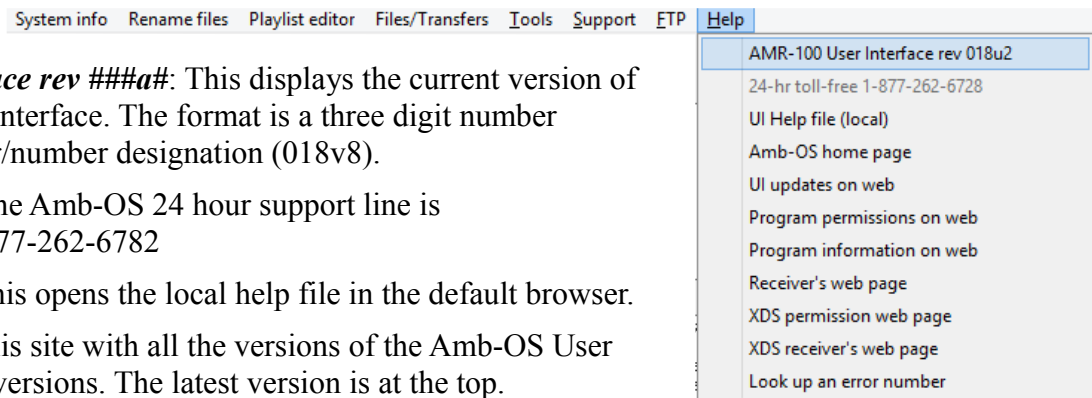

## Global Buttons

**Close:** Closes the FTP status window (no confirmation).

**Help:** Opens the help file.

## Help

**AMR-100 User Interface rev ####**: This displays the current version of the Amb-OS User Interface. The format is a three digit number followed by a letter/number designation (018v8).

**Amb-OS Help Line**: The Amb-OS 24 hour support line is 877-Ambos2u or 877-262-6782

**UI Help file (local)**: This opens the local help file in the default browser.

**UI updates on web**: This site with all the versions of the Amb-OS User Interface software versions. The latest version is at the top.  
Address: <http://www.focussat.net/ambos/ui.html>.

**Program permissions on web**: This opens the program permission page to request and remove programs. Enter the [serial number](#) of the receiver and the password. The site opens a window showing the address used to send the password and an option to add an alternate user.  
Address: <http://www.focussat.net/cgi-bin/ambos/permissions>

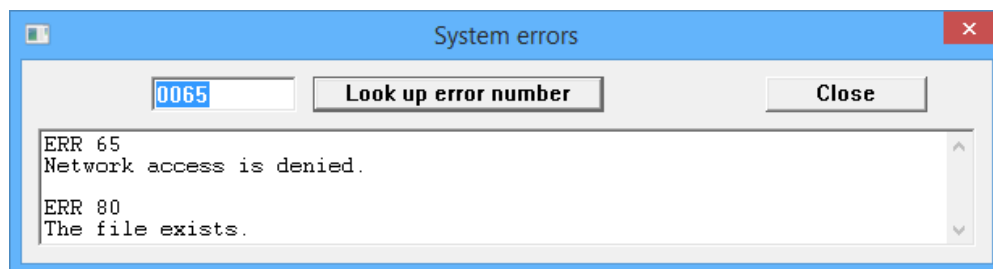

**Program information on web**: This opens the program information page, which lists all the programs on the Amb-OS system, the [Amb-OS system name](#) and the queue times.  
Address: <http://www.focussat.net/ambos/programs.html>.

**Receiver's web page**: This opens the [AMR-100](#)'s built-in web page with access to various settings and logs on the receiver. The AMR-100 Installation manual has a full description on receiver's web page.

**XDS Permission web page**: This opens the [XDS](#) permission page to request programs from Moody Radio for the XDS receiver.  
Address: <http://www.whereturn.org/storeandforward>

**XDS receiver's web page**: This opens the [XDS](#) receiver's default web page.

**Look up an error number**: This provides explanations for Error numbers in the Amb-OS User Interface activity window. Simply enter the error number for an explanation.

## Menu Buttons

### Destination dir

This opens a dialog box to select a the destination folder of the transferred programs. Select the desired folder and press “OK” to save the directory. A folder can be on a different computer as long as it is connected to the same network. This is particularly useful when transferring programs to automation system. However, if the network fails, the program will not be transferred and an error will be generated indicating it cannot find the specified directory.

#### WARNING

**If a destination directory is on a different computer and the network fails or the destination computer fails, the program will not transfer.**

If the Browse For Folder dialog opened after [importing](#) a settings file, the “[System info](#)” box opened to enter the [AMR-100](#)’s [IP address and serial number](#).

#### NOTE

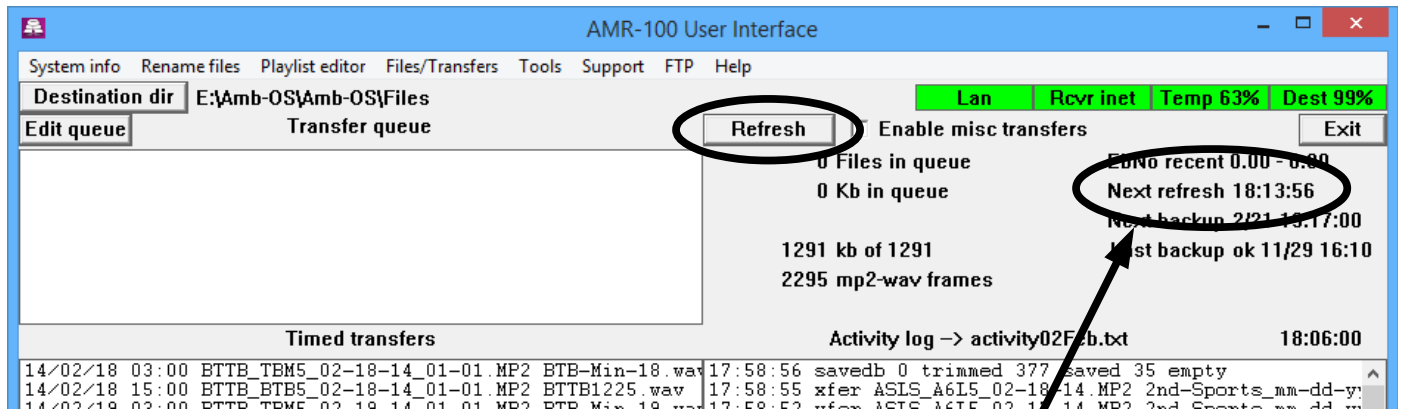

**When [installing the Amb-OS User Interface](#) the first time, the program will ask for a destination folder for the audio files.**

#### WARNING

**The destination directory needs to be on a drive with several gigabytes free or the drive will need to have old files removed. The Amb-OS User Interface will be unable to transfer programs if there is not enough space on the destination drive.**

## Refresh

After making changes to the timed transfers or to make sure the latest programs have been transferred from the receiver, use the “Refresh” button. This immediately rereads the programs on the [AMR-100](#) and updates any timed transfer changes, but it does not transfer programs.

Next Refresh

A [total refresh](#) in the “Tools” menu rereads the programs on the [AMR-100](#) and also transfers programs.

Newly arrived programs update automatically and the system refreshes every 10 minutes. The next refresh time is shown in under the “next refresh” message.

## Enable Miscellaneous Transfers

This option turns on and off the automatic transfer of programs that do not have a [timed transfer](#) in the “File rename” box. Checking the “Enable misc transfers” box causes programs to automatically transfer to the [destination directory](#). If this box is not checked, then the programs without a [timed transfer](#) will not be transferred. All programs listed in the “[Transfer Queue](#)” window, do not have a transfer time. Without checking this box, programs will have to be [transferred manually](#).

## Exit

“Exit” terminates the program. Terminating the Amb-OS User Interface prevents programs from transferring so a confirmation window opens when clicking on “Exit.” Press “Yes” to confirm exiting or “No” to return to the Amb-OS User Interface. To finish background processes and clear the [transfer queue](#), the Amb-OS User Interface delays the shutdown for three seconds.

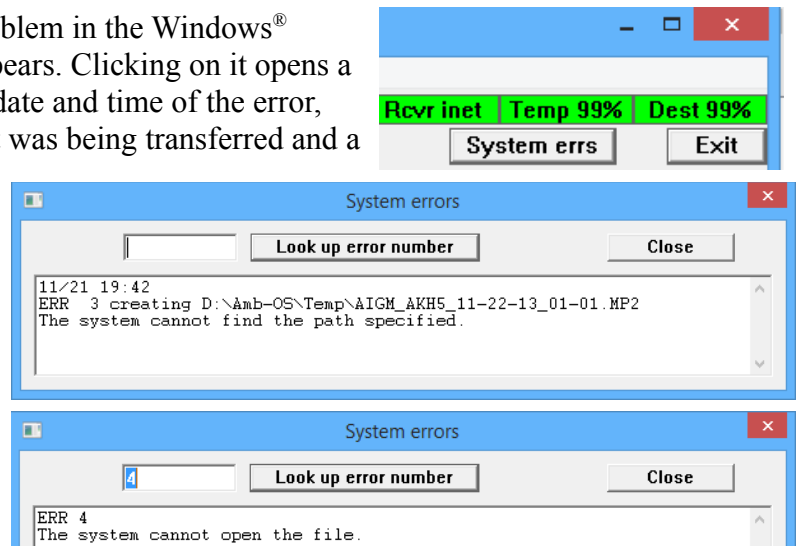

## System Errors

If the Amb-OS User Interface encounters a problem in the Windows® operating system, the “System errs” button appears. Clicking on it opens a window showing the error. Each error has the date and time of the error, the error number, the name of the program that was being transferred and a description of the file. Additionally, any number can be put in the “[Look up error number](#)” box to give a verbose description of an error number.

After displaying the “System error” window, the “System errs” button disappears until another system error occurs.

If the problem continues, Windows® may shut down the Amb-OS User Interface.

## Amb-OS User Interface Windows

Several windows display information about what the Amb-OS User Interface is doing. The “[Transfer Queue](#)” shows programs being transferred immediately after arriving. The “[Timed transfers](#)” shows the programs transferred only at the time listed. programs with a [timed transfer](#) are not listed in the “[Transfer Queue](#)” and programs without a [timed transfer](#) are not listed in the “[Timed transfer](#)” window. Between the two windows, all the programs are shown that will be transferred. In order to have programs without a [timed transfer](#) get automatically transferred, select the “[Enable misc transfers](#)” box.

### WARNING

Files that have not arrived are not listed in either window. Only those files that have been successfully received are shown.

[Edit Queue](#)

[Transfer Queue](#)

[Program Transfer Messages](#)

The screenshot shows the AMR-100 User Interface with several windows and controls. At the top, there's a menu bar with options like System info, Rename files, Playlist editor, Files/Transfers, Tools, Support, FTP, and Help. Below the menu bar, there's a status bar showing 'Lan', 'Rcvr inet', 'Temp 63%', and 'Dest 99%'. The main area is divided into several sections:

- Edit queue:** A list of files being transferred, including ASLS\_SLS1\_02-15-14\_01-01.MP2, BGEA\_HOD1\_02-16-14\_01-01.MP2, and FOTF\_ERL5\_02-07-14\_02-10.MP2.
- Transfer queue:** A list of files being transferred, including ASLS\_SLS1\_02-15-14\_01-01.MP2, BGEA\_HOD1\_02-16-14\_01-01.MP2, and FOTF\_ERL5\_02-07-14\_02-10.MP2.
- Timed transfers:** A list of files being transferred at a specific time, including 14/02/18 03:00 BTTB\_TBM5\_02-18-14\_01-01.MP2, 14/02/18 15:00 BTTB\_TBM5\_02-18-14\_01-01.MP2, and 14/02/19 03:00 BTTB\_TBM5\_02-19-14\_01-01.MP2.
- Refresh:** A button to refresh the transfer queue.
- Enable misc transfers:** A checkbox to enable miscellaneous transfers.
- Exit:** A button to exit the interface.
- 323 Files in queue:** A summary of the files in the queue.
- 3365636 Kb in queue:** A summary of the total size of the files in the queue.
- ASLS\_SLS1\_02-15-14\_01-01.MP2:** A summary of the file being transferred.
- 5887 kb of 39365:** A summary of the file size.
- 1250 mp2-wav frames:** A summary of the number of frames.
- Activity log -> activity02Feb.txt:** A log of the activity, including 18:29:19 xfer ASLS\_ASIP\_02-22-14\_01-01.MP2, 18:29:17 xfer ASLS\_ASIP\_02-15-14\_01-01.MP2, and 18:27:37 rcvd PFMX\_BPT5\_02-13-14\_01-01.MP2.
- 18:29:00:** A timestamp for the activity log.
- Message Window:** A window showing the progress of the transfer, including 'converting to 44100 hi precision', 'ASLS\_SLS1\_02-15-14\_01-01.MP2 -> SLS-15.wav', 'soc=968 for ASLS\_SLS1\_02-15-14\_01-01.MP2', 'UPLOAD ASLS\_SLS1\_02-15-14\_01-01.MP2', 'DATE: 2/3/2014 19:44:00', and 'CONTENT-LENGTH: 40309532'.

[Message Window](#)

[Timed Transfers](#)

[Activity Log](#)

## Transfer Queue

This shows programs that will be transferred as soon as they arrive if the “[Enable misc transfers](#)” box is checked. The Amb-OS User Interface transfers the program from the [AMR-100](#) to the directory selected in the [destination directory](#) option. The window displays the [program renames](#), selected in the “[File Rename](#)” window.

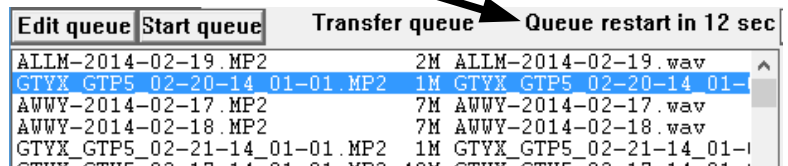

Clearing the “[Enable misc transfers](#)” box disables the automatic transfer and removes programs from the “[Transfer Queue](#)” window. This also means programs without a [timed transfer](#) will have to be [manually transferred](#) with the “[Files/transfers](#)” window.

Edit queue	Transfer queue

FOTF_ERM5_02-20-14_03-05.MP2	2M FOTF_ERM5_02-20-14_03-05.MP2

## Edit Queue

This pauses the transfer of programs for thirty seconds and allows programs to be reordered. To move a file to the top of the list, double click on the desired program. If no transfers are in progress, the selected program moves to the top of the list. Programs in the process of being transferred or converted will not be aborted so the selected program will be put after the transferring program and be the next program transferred. The queue automatically restarts in thirty seconds to prevent the queue from being permanently disabled and stopping programs from being transferred. The countdown timer to restart the queue appears on the screen.

The restart timer cannot be reset by clicking on “Edit Queue.” The queue has to be [restarted](#) and then click on “Edit Queue” to pause the queue for another thirty seconds. As soon as the “[Start queue](#)” is clicked, the current transfer resumes or the next program begins transferring.

The screenshot shows a window titled "Queue" with a tab labeled "Edit queue" selected. The window contains a list of programs being transferred. At the top right, a status bar indicates "Queue restart in 12 sec". An arrow points from the text in the paragraph above to this status bar.

Edit queue	Start queue	Transfer queue	Queue restart in 12 sec

GTXY_GTP5_02-21-14_01-01 .MP2		1M GTXY_GTP5_02-21-14_01-01 .wav	

## Start Queue

This button appears each time when clicking on the “[Edit queue](#)” button. This allows the queue to be restarted before the thirty second pause finishes. If the “Start queue” button is not pressed, the queue automatically restarts in thirty seconds to prevent the queue from being permanently disabled.

## Timed Transfers

This shows the programs with their specific [transfer times](#) entered in the [Rename files](#) window. Programs are listed in chronological order starting with the earliest transfer. The “[Transfer queue](#)” window shows unscheduled transfers if the “[Enable misc transfers](#)” box is checked.

Timed transfers					
14/02/18	03:00	BTB_TB5_02-18-14_01-01 .MP2	BTB-Min-18..

14/02/22	14:00	FOTF_FOF1_02-22-14_01-04 .MP2	Focus-Wkd01		

## Missed transfer times

If the Amb-OS User Interface was not running at the time of a scheduled transfer or a program arrived after the scheduled transfer time, the program will be transferred when the Amb-OS User Interface is restarted or when the file is available. If a program arrives or the Amb-OS User interface is started more than 24 hours after its scheduled transfer time, the program will have to be [transferred manually](#).

### WARNING

**Programs more than 24 hours later than their scheduled transfer time have to be transferred manually.**

The “[Refresh](#)” button updates the window and shows all the programs that have arrived and any pending transfers. The updated list inserts programs in their appropriate time slots. The Amb-OS User Interface will not transfer any program more than 24 hours after its scheduled transfer time so a late program does not overwrite the current day’s program. However, should program need to be transferred, go the “[Files/transfer](#)” window in “[Tools](#)” and [manually transfer](#) it.

## Activity Log Window

The screenshot shows the AMR-100 User Interface with the following sections:

- System info:** Destination dir: E:\Amb-OS\Amb-OS\Files, Lan, Rcvr inet, Temp 62%, Dest 97%.
- Transfer queue:** Lists files being transferred, including BR\_PROMO-2014-02-15.MP2, RBCM\_SSL1\_02-15-14\_01-01.MP2, etc.
- Timed transfers:** Lists scheduled transfers with timestamps and file names.
- Activity log:** Shows a list of activities with timestamps and descriptions, such as "19:03:57 rcvd AID-2014-02-19.MP2 misc".
- System errs:** Displays error messages, including "EbNo recent 0.00 - 0.00".

The Activity window shows the Amb-OS User Interface program activity. A complete [list of messages](#) is listed in the [Appendix](#).

## Activity Log File

The Amb-OS User Interface automatically creates the “Activity Log File” once a month. The Amb-OS User Interface just uses the month for the log’s file name. That means log files are only kept for one year. The log file for January 2014 (activity01Jan.txt) will be overwritten with the log file for January 2015 (activity01Jan.txt).

File names for the logs:

The activity log files are “activity##MMM.txt”

The FTP log files are “ftplog##MMM.txt”

(## = month number – 01, 02)

(MMM = month name – Jan, Feb)

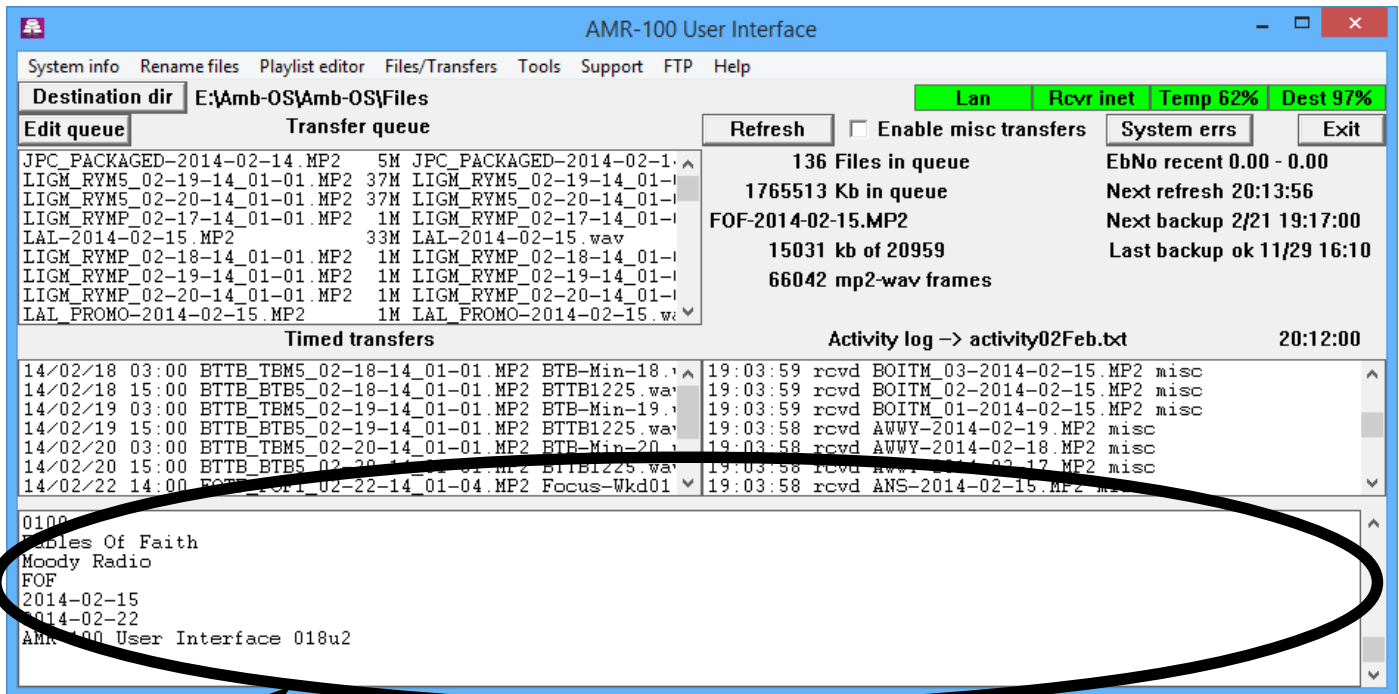

The “Activity Log file” can be used to check the actual [transfer time](#) of programs to verify if programs were transferred at the appropriate time and to see the actual [transmission time](#). Remember, programs will not be transferred until they have been successfully received.

The Activity Log File can be viewed by using the [“Explore log files”](#) under the [“Tools”](#) menu.

Activity log → activity02Feb.txt 20:03:00

AMR-100 User Interface 018u2

The status message window reports the activity between the [AMR-100](#) and the Amb-OS User Interface. This only serves as a troubleshooting aid for Amb-OS support personnel.

## Status Indicators

### Receiver Status

The status boxes report the status of the [AMR-100](#). This section merely summarizes the status messages. The [AMR-100](#) Manual gives a full explanation of the parameters listed. The manual can be downloaded at <http://www.amb-OS/support.html> or viewed on the [AMR-100](#) receiver's web page by entering the receiver's IP address in a web browser.

- EbNo: The number displays the strength of the signal on the [AMR-100](#).  
EbNo is not displayed on the [AMR-100I](#), because there is no RF signal).
- Lan: Shows whether the [AMR-100](#) is attached to a local area network.
- Rcvr inet: Shows whether the [AMR-100](#) can communicate with the Amb-OS servers.
- Temp XX%: Shows the amount of unused space on the temporary directory.
- Dest XX%: Shows the amount of unused space on the destination directory.

A horizontal status bar with five green boxes. The first box contains 'EbNo 12.84', the second 'Lan', the third 'Rcvr inet', the fourth 'Temp 99%', and the fifth 'Dest 99%'.

A horizontal status bar with four green boxes. The first box contains 'Lan', the second 'Rcvr inet', the third 'Temp 99%', and the fourth 'Dest 99%'.

When a problem exists the boxes become yellow as a warning and red to indicate a failure or critical condition. The warnings can be set with the [Manage status indicators](#).

A horizontal status bar with five boxes. The first box is yellow and contains 'EbNo 9.30'. The second box is green and contains 'Lan'. The third box is green and contains 'Rcvr inet'. The fourth box is red and contains 'Temp 1%'. The fifth box is red and contains 'Dest 09%'.

### Pop-up Status Indicators

When moving the mouse pointer over a status indicator, a message window appears below the indicator showing the status of that indicator. The indicator messages can come immediately or after letting the pointer stay on the status messages for a fixed period of time. Set the delay for the pop up indicator messages with the “[Manage Status indicators](#)” in the “[Tools](#)” menu. The message stays open as long as the pointer stays on the message box. When the pointer is moved off the indicator, the message window closes.

A yellow rectangular box containing the following text:  
past 6 hours:  
13.31 max ebno  
12.01 min ebno  
0 bad blocks  
0 lost locks  
3.00, 5.00 thresholds

EbNo

A yellow rectangular box containing the following text:  
233 server logins since 02/12/14 04:50  
0 connect errors  
49 inet downloads  
0 satellite downloads  
0 backfill requests  
0 backfilled pgms

Rcvr inet

A yellow rectangular box containing the following text:  
Temp drive:  
47104 Mb free  
76316 Mb total  
C:\Users\STEVE\_~1\AppData\Local\Temp\

Temporary Drive

A yellow rectangular box containing the text: UI is connected to the receiver

Lan

A yellow rectangular box containing the following text:  
Dest drive:  
464301 Mb free  
476936 Mb total  
E:\Amb-OS\Amb-OS\Files

Destination Drive

**Pop-up Status Error Messages:** The Amb-OS User Interface checks the status of the [AMR-100](#) at periodic intervals so the Pop-up status indicators can be blank or show an error at startup.

A yellow rectangular box containing the text: Unavailable - no contact with receiver

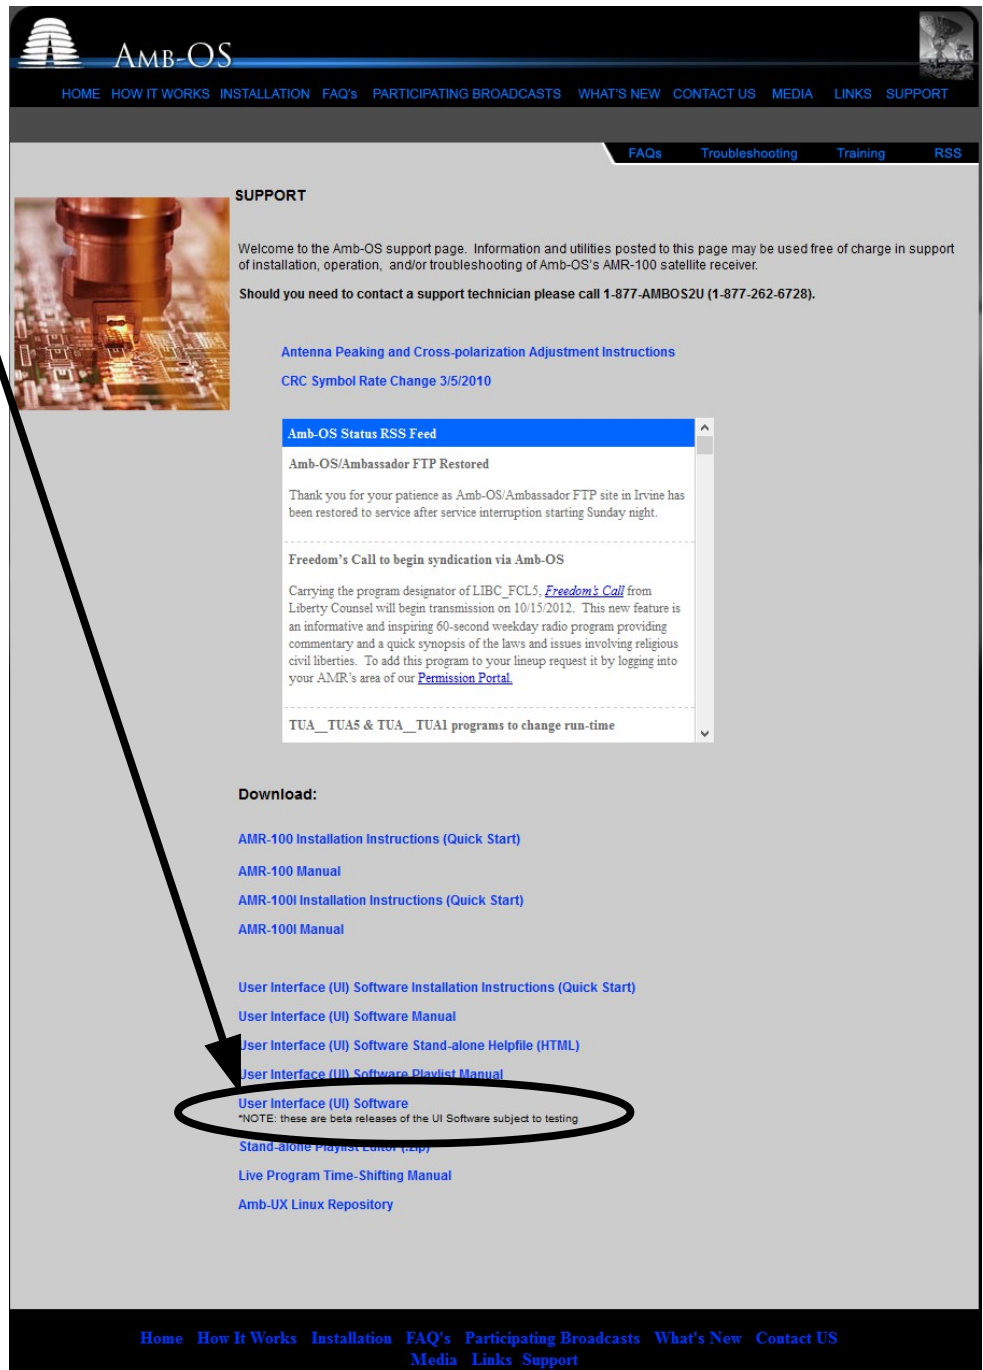

# Amb-OS Appendix

## Installation Details

### Downloading the Amb-OS User Interface

The version of the Amb-OS User Interface installation package does not change the downloading process.

Download the Amb-OS User Interface from <http://www.Amb-OS.com/support.html>. Scroll down and click on the link for “[User Interface \(UI\) Software](#)” to save the file to your computer.

The screenshot shows the Amb-OS website's support page. At the top is the Amb-OS logo and a navigation menu with links: HOME, HOW IT WORKS, INSTALLATION, FAQ's, PARTICIPATING BROADCASTS, WHAT'S NEW, CONTACT US, MEDIA, LINKS, SUPPORT. Below this is a secondary menu with links: FAQs, Troubleshooting, Training, RSS. The main content area is titled 'SUPPORT' and includes a welcome message, contact information (1-877-AMBOS2U), and links to 'Antenna Peaking and Cross-polarization Adjustment Instructions' and 'CRC Symbol Rate Change 3/5/2010'. There is an 'Amb-OS Status RSS Feed' section with updates about the FTP site restoration and a new syndication program. Below this is a 'Download:' section with links to various manuals and software. The link 'User Interface (UI) Software' is circled in black, and a large black arrow points from the text in the preceding paragraph to this link. Other links in the download section include 'AMR-100 Installation Instructions (Quick Start)', 'AMR-100 Manual', 'AMR-100I Installation Instructions (Quick Start)', 'AMR-100I Manual', 'User Interface (UI) Software Installation Instructions (Quick Start)', 'User Interface (UI) Software Manual', 'User Interface (UI) Software Stand-alone Helpfile (HTML)', 'User Interface (UI) Software Playlist Manual', 'Stand-alone Playlist Editor (.zip)', 'Live Program Time-Shifting Manual', and 'Amb-UX Linux Repository'. The footer contains a repeat of the navigation menu.

The first entry in the chart has the latest version. After clicking on the link for the desired version, a dialog box opens asking to open (with Internet Explorer®) or save the file.

Select Save File and, if the browser is set to prompt for a location, the save location dialog box opens. Otherwise, the file will be saved to the default download location.

### AMR-100 user interface downloads

(use with proper regard to EULA, etc, blah, blah, you know...)

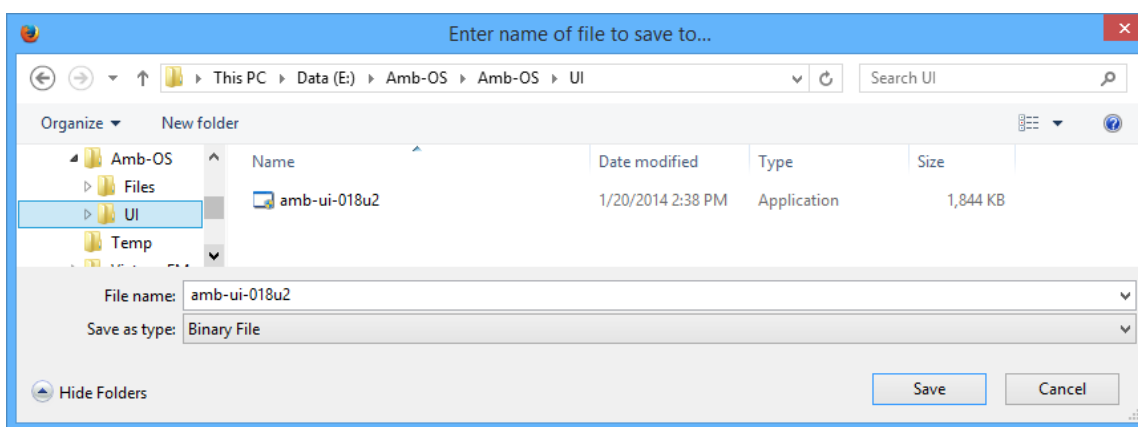

Each rev includes the changes in all previous revs.

#### How to use these files

- exit your UI (user interface) program
- download the revision by clicking its link
- choose Open with CompressedFolders, or save it and unzip it yourself
- double-click on amb-installer.exe

[Latest UI help file](#) (4/25/2013 for rev 018r7) | [Amb-OS for Linux \(amb-ux\)](#)

[rev 019](#)  
6/23/2014 New features since 018: (for bugs fixed, read below)

Select the location for the Amb-OS User Interface installation file and save the file. Once the file has been saved, open Windows Explorer® and navigate to the location of the saved file. With most browsers, the downloaded file is listed in the download file list to just click on the file name. Many browsers use <ctl><j> to open the downloaded file list.

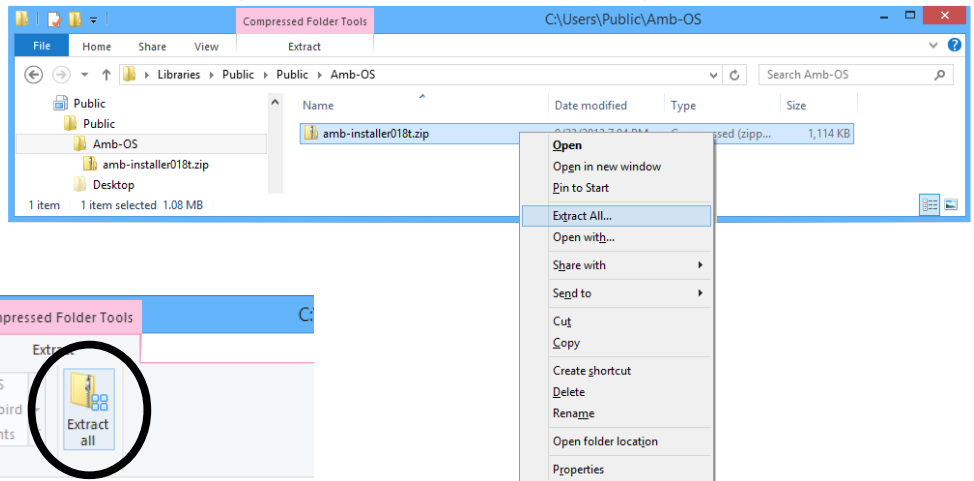

Versions 018u and before come as a zip file. Use the instructions in [Extracting the Amb-OS User Interface File](#) and then run the extracted executable file.

Versions 018u2 and after come as an installer program. Use the instructions in [Program Installation](#).

## Extracting the Amb-OS User Interface File (Version 018u and earlier)

Extracting the installation file can be done two ways.

1. Right click on the Amb-OS User Interface ZIP file and select “Extract All...” to extract the Amb-OS User Interface.

2. Double click on the file to open the Amb-OS User Interface ZIP package. Click on the “Extract all” box to extract the Amb-OS User Interface program.

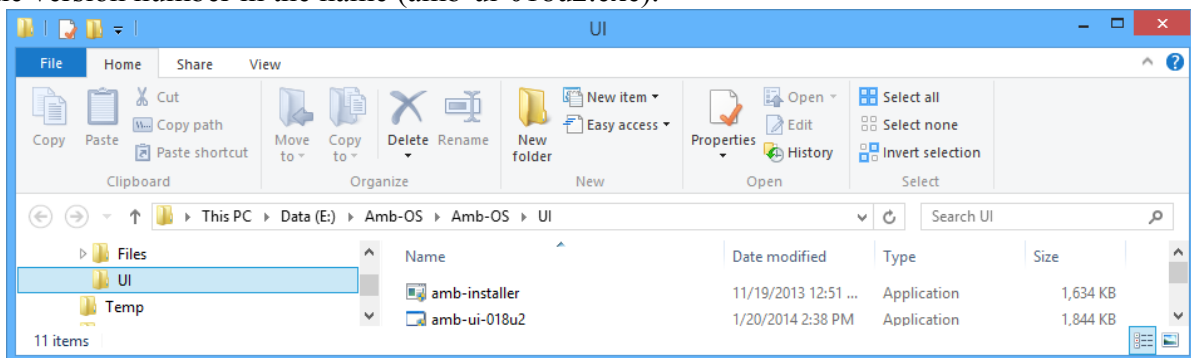

The extraction dialog box opens in order to select the destination of the Amb-OS User Interface installation program. The extraction dialog box allows the folder location to be changed. It defaults to a directory with the same name as the Amb-OS User Interface ZIP file in the same directory where the ZIP file is.

By leaving the “Show extracted files when complete” checked, a new Windows Explorer® window will open with the uncompressed Amb-OS User Interface installation file. Double-click on “amb-installer” to install the Amb-OS User Interface.

## Program Installation

Using Windows Explorer®, open the location of the Amb-OS User Interface executable installation program. Double click on the file to begin the installation process.

Versions 018u and earlier will have a generic name (amb-installer.exe) and versions [018u2](#) and later will have the version number in the name (amb-ui-018u2.exe).

## Amb-installer

When the install programs runs, it brings up the installation window.

**Install:** installs the program

**Exit:** terminates the installation process

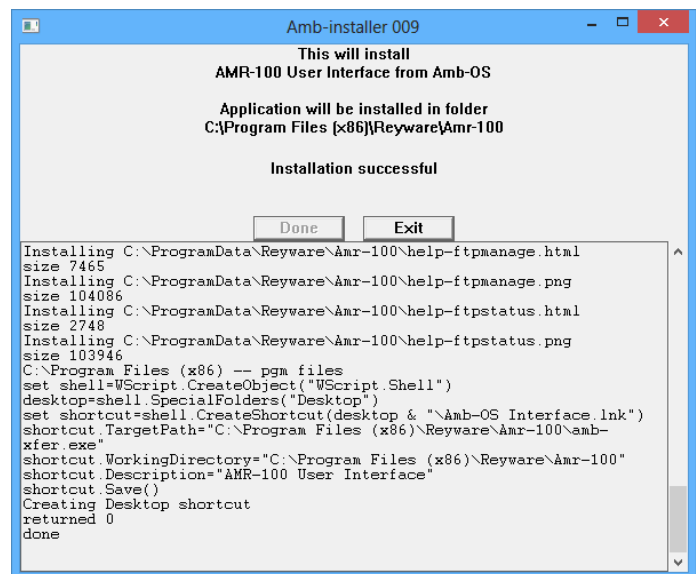

### WARNING

Clicking on “Exit” before clicking on “Install” aborts the Amb-OS User Interface installation. The Amb-OS User Interface will not be installed and that will prevent transferring audio programs from the AMR-100 receiver and creating playlists.

During the installation process, the window displays the progress of the installation. The install button will change to Done and “grey” out to show you that the installation is complete. Press Exit to complete the installation.

### WARNING

Wait until Done appears at the bottom of the window before pressing Exit or you will not finish the installation.

After the Amb-OS User Interface installs, some versions of Microsoft Windows® may give open a window with the following warning: “[This program might not have installed correctly.](#)” If so, simply click on “[This program installed correctly.](#)”

Click on Exit to terminate the Amb-installer program.

As part of the installation process, the Amb-OS User Interface puts a shortcut icon the desktop after successfully installing.

Double click on the icon to start the Amb-OS User Interface.

## Amb-Install 004

When the install programs runs, it will bring up the installation window with several options.

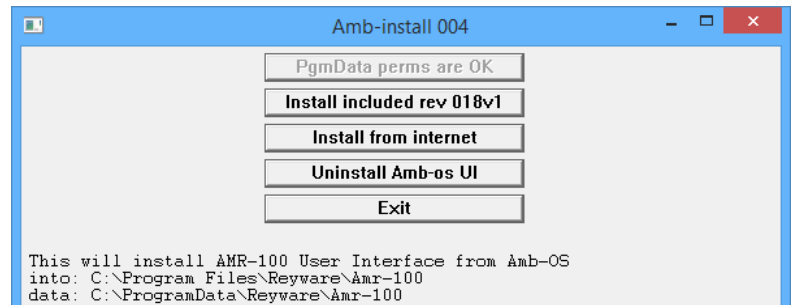

[Fix permissions](#)

[Install included rev 018v1](#)

[Install from internet](#) (not implemented)

[Uninstall Amb-os UI](#)

[Exit](#)

### WARNING

Clicking on “Exit” before clicking on “Install” aborts the Amb-OS User Interface installation and the Amb-OS User Interface will not be installed preventing the transfer of audio programs from the AMR-100 receiver and creating playlists.

## Fix Permissions

Due to potential conflicts with Microsoft Windows® versions 7 and 8, some program permissions in earlier versions of the Amb-OS User Interface need correcting. If access denied errors happen, this option often corrects those errors if they are caused by improper file or folder permissions.

Click on [Exit](#) after the repairs have been done.

### NOTE

The latest version of the Amb-OS User Interface does not need to be installed to use this option.

## Install Included Rev

The install button displays the version downloaded (018v1 or current version). During the installation process, the message “UI is not running” disappears and the window displays the progress of the installation.

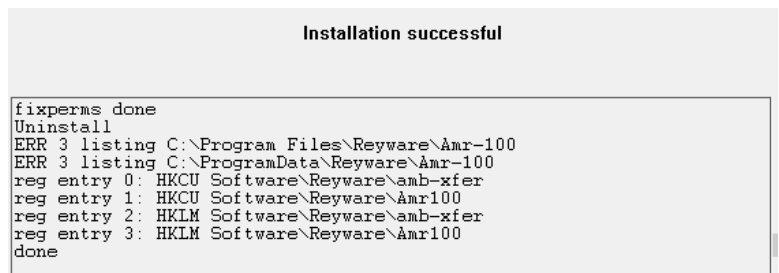

Windows® version 8 may open a [warning notice about protecting the PC](#). Click on “More information” and then click on “Run away” in the next window (see [Windows® version 8](#) installation warnings).

When the Amb-OS User Interface has been installed, a message says, “Installation successful.”

### WARNING

Wait until “Installation successful” appears at the bottom of the window before pressing “Exit” or you will not finish the installation.

As part of the installation, the Amb-OS User Interface puts a shortcut icon the desktop after successfully installing.

Double click on the icon to start the Amb-OS User Interface.

Click on [Exit](#) to complete the installation.

## Install from Internet

This has not been implemented in install version 004. Use “[Update UI](#)” in the “[support menu](#)” to install a version from the Internet.

## Uninstall Amb-OS UI

### Amb-Install - Revision 004 and later

Run the [Amb-OS User Interface install program](#) located in the directory selected when the program was downloaded. Click on the “Uninstall the Amb-OS UI” button. The program opens a confirmation window to allow canceling the uninstall process and preserving files. It uninstalls all versions of the Amb-OS User Interface.

If the Amb-OS User Interface is running, an error window opens stating the Amb-OS User Interface program must be stopped before proceeding.

After the Amb-OS User Interface program has been uninstalled, the installation window indicates the directories have been removed and displays the message: “Installation successful.”

## NOTE

The latest version of the Amb-OS User Interface will uninstall all versions.

## Manually Uninstall Revision 018u1 and earlier

If you need to uninstall the Amb-OS User Interface, you need to delete the “*Reyware*” directory in the “*Programs*” directory on the C: or boot drive.

Open *Windows Explorer*® and select the C: drive. It may display a message that these files are hidden. Click on the option to show the files.

Double click on the “*Program Files*” directory in a 32 bit operating system or “*Program Files (x86)*” with a 64 bit operating system.

Scroll down until you see “*Reyware*,” right click on that directory and select “*Delete*” and confirm that you want to delete the directory.

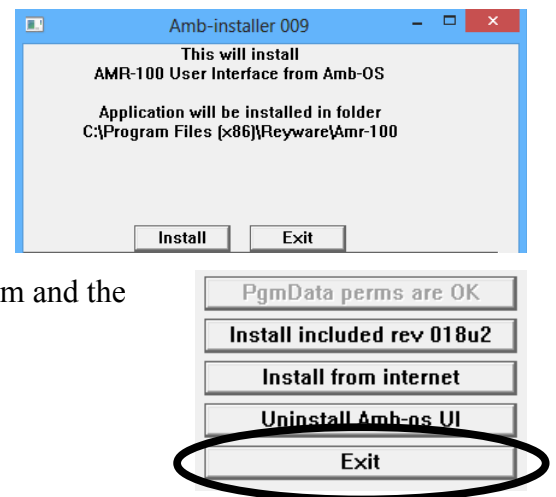

Under the “*Program Files*” or “*Program Files (x86)*,” scroll down to the “*ProgramData*” directory and open it. Delete the “*Reyware*” directory. Right click on that directory and select “*Delete*” and confirm that you want to delete the directory.

Right click on the desktop icon and click on “*Delete*” to remove the icon.

## Exit

Amb-installer (version 009 and earlier): Clicking on “Exit” before clicking on “Install” will not install the Amb-OS User Interface and terminate the Amb-installer program.

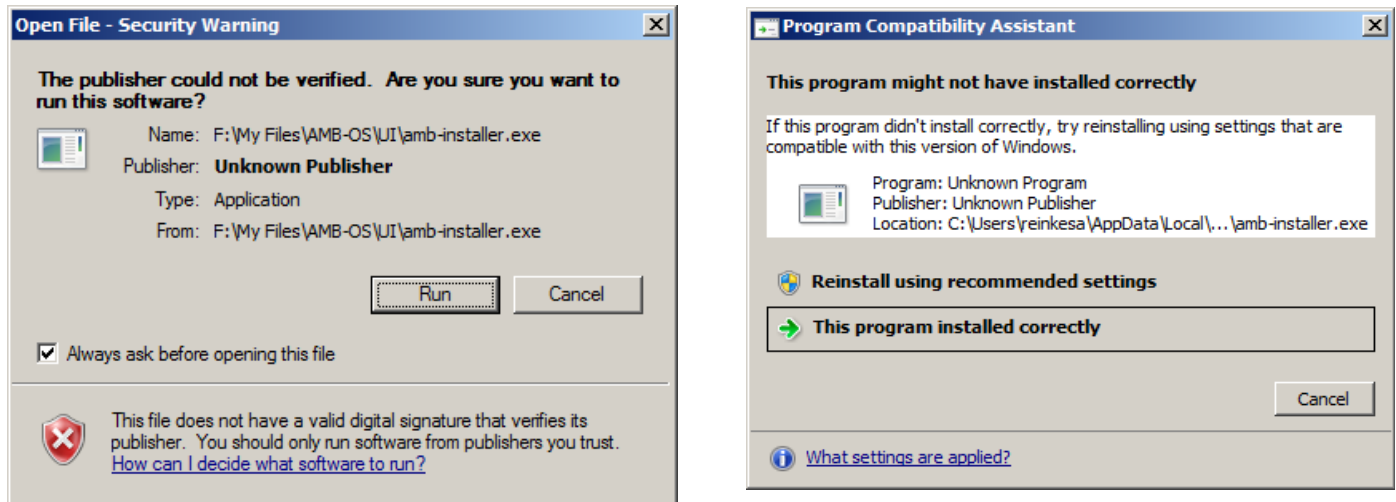

Amb-install (version 004 and later): After completing the desired action in the installer program, click on “Exit” to end the program. Clicking on “Exit” before doing any action ends the installer program and the Amb-OS User Interface is not installed or changed.

## Install Warnings

### Windows® version 7 or earlier with Amb-Installer (Version 018u1 and earlier)

When starting the Amb-OS User Interface installation program, a “Security Warning” window may open. Click on “Run” to install the program.

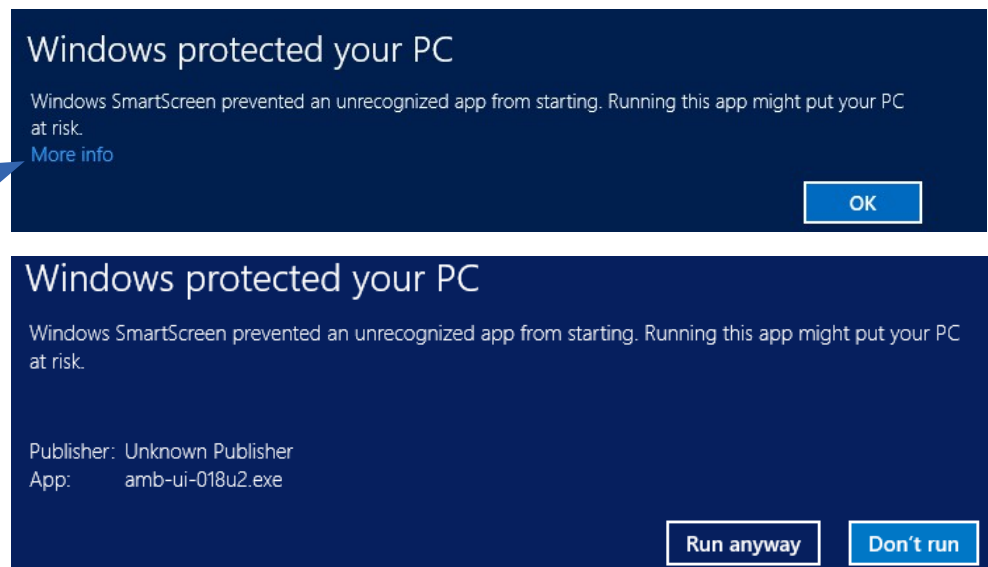

Some versions of Microsoft Windows® using the “[amb-installer](#)” may give you the following warning after the Amb-OS User Interface installs: “This program might not have installed correctly.”

If so, simply click on “This program installed correctly” to complete the installation.

### Windows® version 8

A security warning may pop up with the message stating the program may put the computer at risk. Click on “More info” to expand the window.

Click on “Run Anyway” to install the Amb-OS User Interface.

## Initial Settings

When installing the Amb-OS User Interface for the first time, the “Amb-OS UI initial startup” window opens automatically to set the Amb-OS User Interface parameters.

The options to set the Amb-OS User Interface parameters:

[Browse for an export file on my disk](#)

[Look for an export file on my receiver](#)

[Look for an export file on Ambassador backup site](#)

[Manually enter information](#)

The general options:

Help: Opens the Amb-OS User Interface installation section in the help manual.

Cancel: This terminates the installation program. The Amb-OS user Interface cannot transfer files until the initial settings have been entered.

### NOTE

For a new installation of the **AMR-100** receiver and a new installation of the **Amb-OS User Interface**, all settings will have to be manually entered.

### WARNING

Canceling the “Initial startup” prevents the Amb-OS User Interface from running and programs cannot be transferred or played.

Canceling the startup process may produce an error that the Amb-OS User Interface has stopped working. Click on “Close Program” to close the installation program.

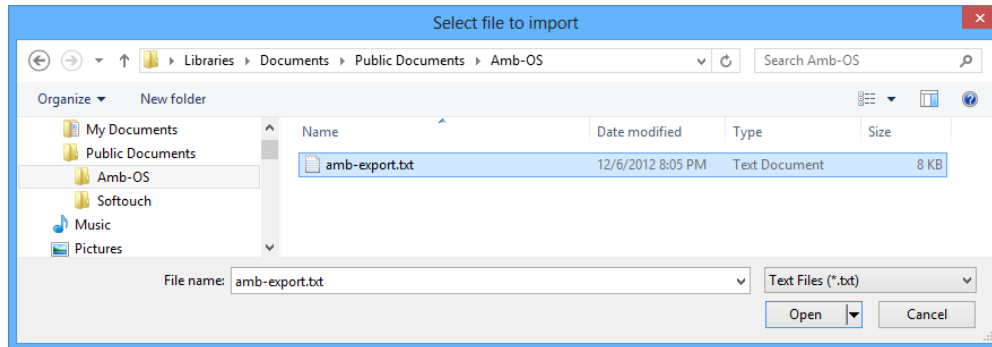

## Browse for an export file on my disk

If this is a first time installation for the Amb-OS User Interface and the [AMR100](#), a back up file will not exist on the [AMR100](#). If an [export](#) was done with a previous receiver, a file may exist on a computer to import. A backup file is created by using the [Export system info](#) under the [Tools](#) menu.

Clicking on “Browse for an export file on my disk” opens a dialog box to the users Documents folder. If the computer has new installation, the export file may be on another computer on the network. If no export file exists on the computer or the network, a backup file may exist on the [receiver](#) or the [Amb-OS FTP site](#). If not, the settings will have to be set [manually](#).

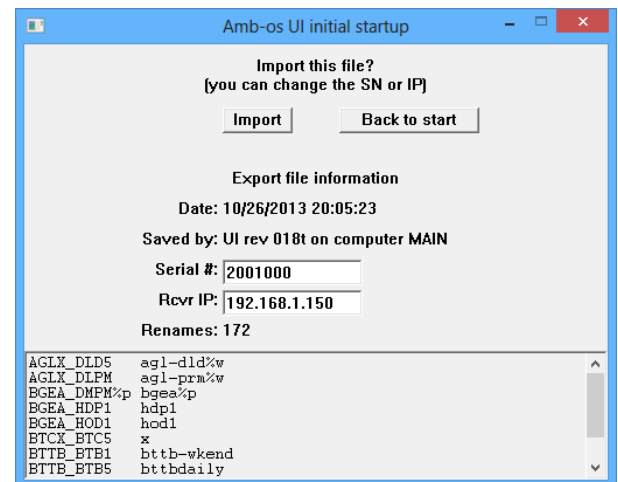

Navigate to the directory with the backup file, select the desired backup file and click on Open.

After opening the backup file, the [file rename](#) patterns will be shown. After verifying the data in the file, click on “Import,” otherwise click on Back to start to select a different file.

If no [destination directory](#) was specified in the imported settings, a local directory will open to allow the selection of the [destination directory](#). The dialog at startup is the same as the directory selection at installation.

Select the [destination directory](#) then click on “Import” to start the Amb-OS User Interface.

## Look for an export file on my receiver

The Amb-OS User Interface automatically creates a backup file on the [AMR-100](#) so, unless this is a first time installation for both the Amb-OS User Interface and the [AMR-100](#), a backup file should exist on the [AMR-100](#).

Click on the “Look for an export file on my receiver” to open a dialog box to enter the [AMR-100](#)’s [serial number](#) and [IP address](#).

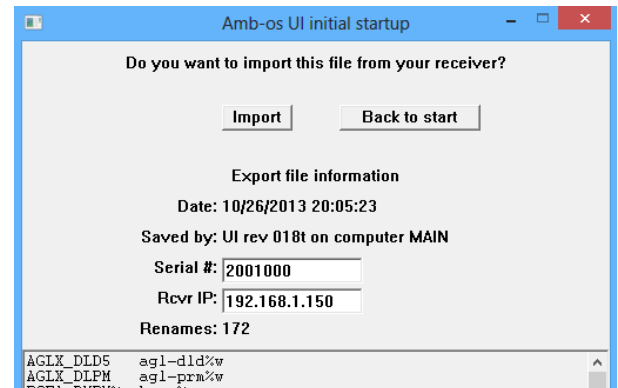

### WARNING

**If the wrong IP address is entered it could take several minutes for the error dialog box to appear.**

After opening the backup file, the [file rename](#) patterns will be shown. Verify the data in the file and click on “Import.” If the file does not have the correct information, either search for a file on a [computer](#) or get the file from the [Amb-OS FTP](#) site. Click on “Back to start” to select a different source.

If no download directory or [destination directory](#) was specified in the imported settings, a local directory will open to allow the selection of the [destination directory](#). The dialog at startup is the same as the directory selection at installation.

Select the [destination directory](#), then click on “Import” to start the Amb-OS User Interface.

## File Import from Receiver Error Messages

If the wrong [AMR-100](#) serial number or IP address is used, the Amb-OS User Interface will return an error dialog box that the receiver could not be found.

If the receiver is new and the export file does not exist, the Amb-OS User will return to the [Initial Startup](#) window with a message saying it could not import the file.

## Import a backup file on Ambassador's FTP site

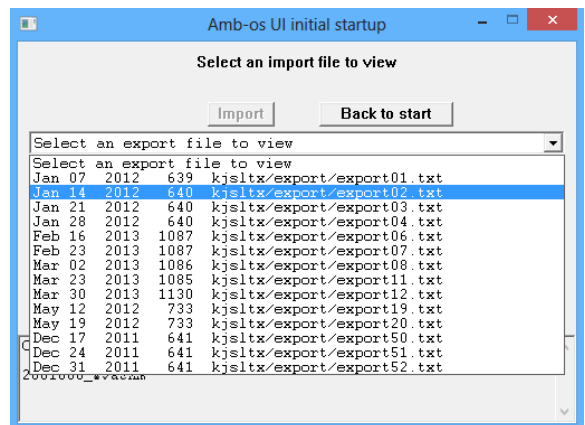

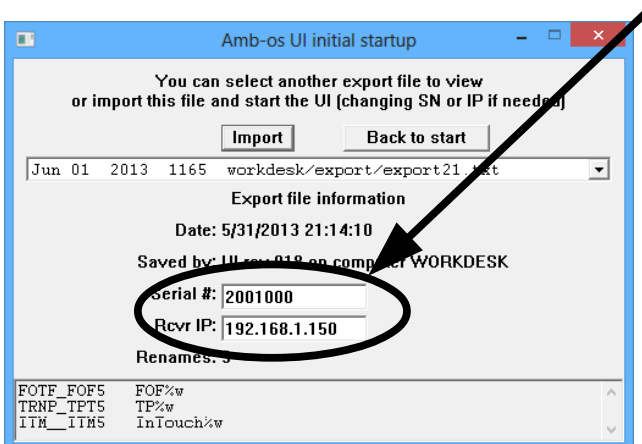

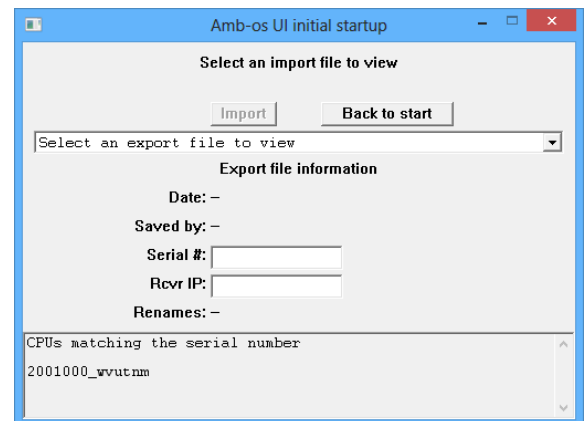

If the [AMR-100](#) has been replaced, use the serial number of the old [AMR-100](#). If the replacement [AMR-100](#) was in another site, a backup file will exist on the Amb-OS FTP site, but the file will not have the settings for the current application.

Click on the “Look for an export file on Ambassador backup site,” to open the dialog box to enter the [AMR-100 serial number](#). Enter the serial number of the receiver.

If the Amb-OS User Interface has been installed for an existing receiver, a window will open asking to select a file. The Amb-OS User Interface does periodic backups to the Amb-OS FTP site. Click on the down arrow on the right to list the available files. Highlight the desired file. Normally, that would be the most recent file.

If the [AMR-100](#) has been replaced, after selecting the desired import file, change the [AMR-100 serial number](#) and [IP address](#) to match the specifications of the current receiver. This puts the correct information in the [System information](#).

If no download directory or [destination directory](#) was specified in the imported settings, a local directory will open to allow the selection of the [destination directory](#). The dialog at startup is the same as the directory selection at installation.

Select the [destination directory](#), then click on “Import” to start the Amb-OS User Interface.

## FTP Import Errors

If a bad serial number is entered, the Amb-OS User Interface returns an error box reporting the serial number was bad. If the receiver was never installed before, no backup file will exist.

If no download directory or [destination directory](#) was specified in the imported settings, a local directory will open to allow the selection of the [destination directory](#). The dialog at startup is the same as the directory selection at installation.

Select the [destination directory](#), then click on Import to start the Amb-OS User Interface.

## Manually enter information

If no backup file (local or remote) exists or to enter all new settings, select the “Manually enter information” button. A dialog box opens to enter the [AMR-100](#)’s [serial number](#) and [IP address](#) and a [destination directory](#). The [destination directory](#) has to be selected or an error will come up in the dialog box.

The dialog information remains unchanged if no [destination directory](#) was selected so simply select the “Browse for destination directory” button to select the [destination directory](#).

After selecting the [destination directory](#) the Amb-OS User Interface will open. All the [file transfers](#) or [playlists](#) will have been created, because no settings were imported.

## Program Name Changes

When ministries change program names, the Amb-OS User Interface will automatically change the listing in the “[Rename files](#)” window, but leave the [local pattern](#) unchanged. The Amb-OS User Interface opens a window with a summary of the changes and the option to accept or postpone the changes.

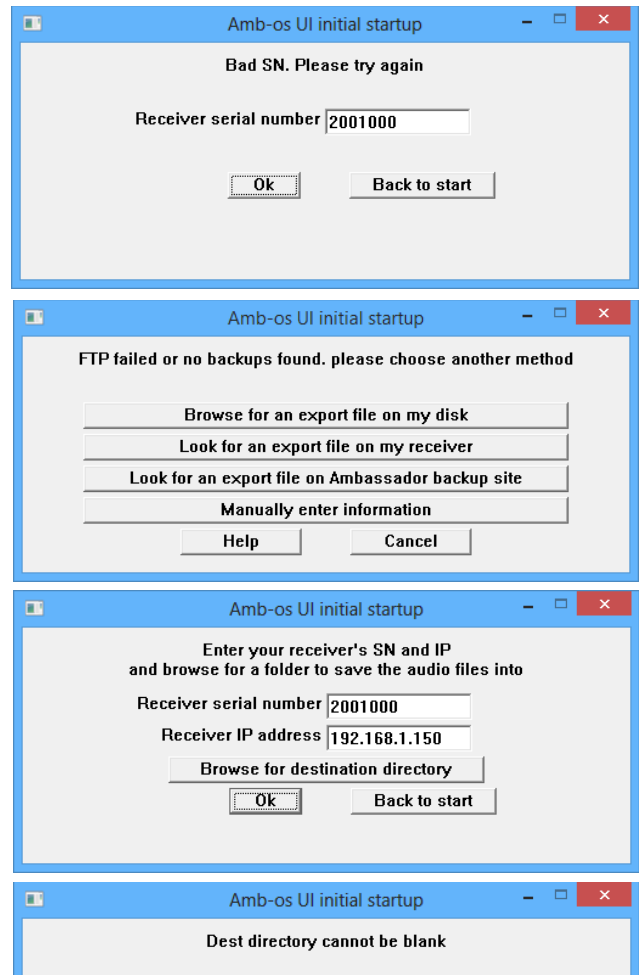

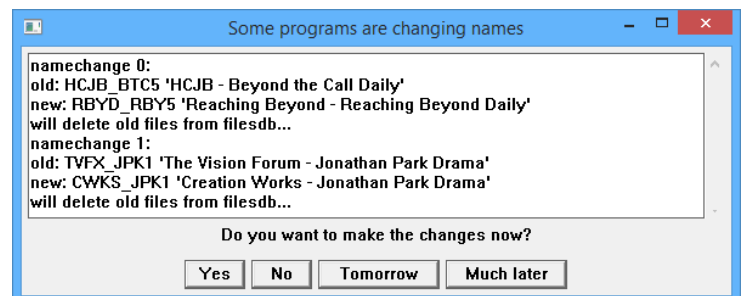

**Yes:** Makes the changes immediately.

**No:** Ignores the changes.

**Tomorrow:** Will make the changes the next day.

**Much later:** Makes the changes at a later time.

Programs can also be checked at any time with the “[Recheck name changes](#)” in the “[Support](#)” menu.

## WARNING

**If the the program names are not changed, the program will not be transferred when the programs arrive with the new name.**

## Retrieving the [AMR-100](#) Settings

Press <ENTER> on the front panel of the [AMR-100](#) to display the serial number and IP address. The “Serial No:” and “IP Addr:” of the local [AMR-100](#) will be different from the example.

A static IP address will be displayed; however, if DHCP was used to set the IP address, press the <DOWN Arrow> until the “IP Addr: DHCP” line is highlighted. Press <ENTER> to display the IP address.

Record these numbers to verify or enter them into the receiver information dialog box.

Setup	Date
Firmware:	2.28
Serial No:	2001000
IP Addr:	10.100.1.100
Receiver Utilities	

Setup	Date
Firmware:	2.28
Serial No:	2001000
IP Addr:	DHCP
Receiver Utilities	

Setup	Date
MAC:	xxxxxxxxxxxxxxxx
Alarm:	#6
DHCP:	Yes
IP Addr:	192.168.1.150

## File Transfer Methods

The Amb-OS User Interface transfers programs [immediately](#) after being received ([miscellaneous transfers](#)) or at a scheduled time and day ([timed transfers](#)). [Miscellaneous transfers](#) are programs with no time in the “[Xfer time \[day\]](#)” column in the “[Rename files](#)” window. The “[Enable misc transfers](#)” box has to be checked or programs without a [timed transfer](#) have to be done [manually](#).

## Miscellaneous Transfers

Miscellaneous transfers automatically transfers a program as soon as it arrives. This option works if using a unique program name, because new programs will not overwrite the previous program. When using the same program name every day a transferred program could overwrite an existing program before it airs. For example, if using “IFL-Daily” for all programs and the new program arrives at 8:00 am and the program airs at 9:00 am, that program could be replaced when the new program arrives. By using a [transfer time](#) after the program finishes airing (9:30 am or later) avoids this problem.

Automatic transfers can be enabled or disabled with “[Enable misc transfers](#)” box. Without checking the “[Enable misc transfers](#)” box, programs will not be listed in the “[Transfer queue](#)” window and have to be transferred [manually](#) through the [files/transfer](#) window. Checking the “[Enable misc transfers](#)” box lists programs in the “[Transfer queue](#)” window and automatically transfers the programs after being received.

## Timed Transfers

Timed transfers work well when using the same name every day for a program, but it can be used for all program transfers. The new program will only be transferred at the time specified in the “[Xfer time \[day\]](#)” column in the “[Rename files](#)” window. Timed transfers prevent a new program from overwriting the current day’s program if the transfer time is after the current program airs. If a program does not arrive until after the time in the “[Xfer time \[day\]](#)” column, it will transfer immediately after being received unless it arrives 24 hours after the scheduled [transfer time](#).

## Manual Transfers

Without a time specified in the “[Xfer time \[day\]](#)” column in the “[Rename files](#)” window and without the “[Enable misc transfers](#)” box checked, a program will have to be transferred manually. To do a manual transfer, open the “[Files/transfer](#)” window and double click on the program to transfer.

Manual program transfers retain the name specified in the [rename pattern](#) and applies any changes to the program as specified in the “[System info](#)” section (“[Output format](#),” “[Output channels](#),” “[File output extension](#)” or any [Cart Chunk](#) options).

## Manual FTP Transfers

In the “[Manage Sites](#)” window:

- Log in to a site, [navigate to the directory](#)
- Click on the program
- Click on “[Save as](#)” to download it.

This method will not change the program’s name with [files rename](#) or convert it to a [different format](#).

In the [Status Window](#):

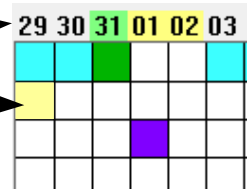

Option 1: Click on the [date](#) that has the missed program.

Option 2: Click on the [box](#) of the missed program.

Option 3: [Refresh](#) a site with the [with downloads](#) box checked. This will transfer all programs that meet or have missed their transfer times.

Click a site to refresh it ☒ with downloads

All sites

29	30	31	01	02	03

Do not use option 3 to transfer only one program.

## Day Offset

The [day offset](#) for program [transfers](#) and for [playlists](#) are different due to the hardware requirements of the [AMR-100](#) receiver.

### Transfer Day Offset

Use a **negative** number to prefeed or get a program before the scheduled air date and a positive number to day the transfer after the air date.

Example – air date 05-14-14:

- 1, the file will be transferred on 05-13-14
- 0, the file will be transferred on 05-014-14
- 1, the file will be transferred on 05-05-09

For a full discussion on entering day offsets for transfers please refer to the “[Rename Files](#)” section.

### Playlist Day Offset

Use a **positive** number to prefeed programs in the playlist and a negative number to delay the transfer after the air date.

Example – air date of 05-14-14

- 1 or +1, the file will be played on 05-13-14
- 0, the file will be played on 05-14-14
- 1, the file will be played on 05-15-14

For a full discussion on the entering day offsets for the playlist, please refer to the “[Playlist Editor](#)” section.

### After 12 PM (noon) Rule

In “[Rename files](#)” box under “[Xfer time \[day\]](#),” the Amb-OS User Interface transfers the same day’s program if scheduled before 12 PM (noon) and transfers the next day’s program after 12:00 PM (noon) if without a [day offset](#) used.

09:00 will transfer the program for 02-05-14 on 02-05-14

13:00 will transfer the program for 02-06-14 on 02-05-14

If any day offset is put in the “[Xfer time \[day\]](#)” box, this rule is ignored.

## Program Names

MMMM\_PPP#\_MM-DD-YY\_PN-TP.MP2

MMMM = Ministry Name

PPP# = Program Name

MM-DD-YY = Program air date

PN-TP = part number (PN) of total parts (TP)

All the program names (PPP#) end with a number. That number indicates how many times the program airs in a week.

5 = 5 times a week – typically M-F. If so, the date of the program will be a week day.

1 = 1 time a week – typically a weekend. If so, the date of the program will be a Saturday or Sunday.

The parts are described by the part number (PN) of the program and the total number of parts (TP). Thus 01-01 means this is the only part of a one part program. 02-03 means the file is the second part of a three part program.

Examples of file names:

FOTF\_FOF5\_06-13-14\_01-01.MP2

FOTF = Focus on the Family

FOF5 = Focus on the Family daily program

06-13-14 = Program's air date is June 13, 2014

01-01 = 1 part program, this is part 1 of 1 part.

LWFM\_LWF5\_06-12-14\_01-03.MP2

LWFM = Love Worth Finding Ministries

LWF5 = Love Worth Finding daily program

05-06-09 = Program's air date is June 12, 2014

01-03 = 3 part program, this is part 1 of 3 parts.

IFLM\_PAT1\_06-14-14\_01-03.MP2

IFLM = Insight for Living Ministries

PAT1 = Paws and Tales Weekend

06-14-14 = Program's air date is June 14, 2014

01-03 = 3 part program, this is part 1 of 3 parts.

## Program Specifications

All files on the Amb-OS system are MP2 format, 48K sample rate and normalized to -6 dBfs.

### Broadcast Wave Format

The BWF format uses an MP2 encoding [format](#) with a WAV header and WAV extension. The BWF program has the bext, mext, and fmt information in the header.

To create BWF compatible programs:

- Leave the program [format](#) as MP2
- Use the “[Insert fmt chunk in mp2](#)” to insert the header information
- Force the program extension to WAV with “[Special file extension](#)”

## Activity Window Messages

**began monitoring:** The Amb-OS User Interface began monitoring files on the [AMR-100](#).

**comb:** A multiple part file was combined into one file.

**ERR:** An error happened when either transferring a file or during the “[MP2 Verify](#).” The error follows the filename. Three attempts are made to transfer or verify; therefore, if less than three errors are reported for the same file, the transfer was successful.

**fwatch:** Filewatch from the [AMR-100](#). The Amb-OS User Interface receives a message from the [AMR-100](#) when a new file has been successfully received.

**rcvd:** A file was successfully received by the [AMR-100](#).

**rcvg:** A file is being received by the [AMR-100](#).

**refresh holding for fwatch:** A refresh is scheduled, but it is waiting for the results from the *fwatch*.

**repl:** A file was resent to the [AMR-100](#) and it replaced an existing file within the 24 hour window for a daily program and seven days for a weekly program.

**REPL:** A replacement file has been queued.

**temp cleanup:** The temporary directory has been cleaned to avoid transfer errors.

**total refresh:** The user executed a “[Total refresh](#)” from the tools menu.

**xfer:** A file was successfully transferred from the receiver to the [destination directory](#).

## AMR Receiver Models

### AMR-100

The AMR-100 has an RF section to receive programs from the Amb-OS satellite feed. It can also receive programs from the Internet with a LAN connection and access to the Internet on the network.

### AMR-100I

The AMR-100I does not have a RF section and uses the Internet to receive programs.

## Multiple Amb-OS User Interface Instances

Different computers can run the Amb-OS User Interface to control the same receiver, but the computers cannot have the same [temporary](#) and [destination directory](#), because program conflicts would happen when transferring the same program.

Keeping default [temporary directory](#) on the local computer would not cause a conflict in that directory. If the same [temporary directory](#) is used on the same computers using the same [transfer times](#), when the Amb-OS User Interface [transfers](#) a program, both computers would try to write the same program to the same directory and cause file write issues preventing the program from transferring.

The same thing would happen if the [destination directory](#) was the same on different computers. While tempting to put programs in the same directory when transferring, that can cause transfers to fail or programs to get corrupted. Use different [destination directories](#) for each computer running the Amb-OS User Interface. With a different [destination directory](#), copy the programs from the secondary [destination directory](#) to the primary [destination directory](#).

To change the backup computer to the main computer, change the [destination directory](#) of the Amb-OS User Interface on the desired computer to main [destination directory](#) location and then change the other computer to the backup [destination directory](#).

## Amb-OS Program Listing

Updated 10/07/2009

To get the most accurate information goto: <http://www.focussat.net/ambos/programs.html>

When several versions of a program (eg COMM NC Border etc) exit, the program received on the [AMR-100](#) will have same name. Only one version will be delivered to the [AMR-100](#).

The **Queued** column is the time (eastern) the program gets queued for satellite delivery and the number of days before the air date the program is queued or scheduled for delivery. Programs get sent sequentially and one at time. If multiple programs get queued at the same time or a previous program did finish transmitting, a program may arrive later than the queued time. Look at the “[Activity log](#)” window to see what time a file arrived on your receiver so you know when it can be transferred or played.

### WARNING

This table was accurate at the time of publication. Please verify the correct information on the Amb-OS web site. <http://www.focussat.net/ambos/programs.html>

Abbreviations	
<b>BORD, BORDER</b>	for Canadian border (Canadian contact info)
<b>C/NC/B</b>	for use as commercial, NC, or border
<b>CAN, CANA</b>	Canadian version
<b>CM, COMM</b>	commercial version
<b>NC, NCOM</b>	non-commercial version
<b>SF</b>	short feature
<b>SO</b>	state-specific announcements - handled internally
<b>(st)</b>	stereo
